7 Message

8 Sleep Monitor

The defaulted sleep monitor starts from18:00 pm to next day 12:00 am. The smart watch can automatically identify and judge the sleeping status, and monitor deep sleep/ light sleep or waked status and time.

Notes: Sleep data can only be check on the paired APP.

9 Alarm

Only APP supports alarm setting.

Notes:

9.1 Your mobile phone is suggested to install one connection APP to ensure the success of connection and data synchronization, as multiple APP installation will result in interference and thus influence the connection between your phone and the smart watch.

Note: Some phones using Android system may show that the installation is failed, please go to 'setting' of the phone and authorize the 'Unknown source', then the installation should be applicable.

9.2 When your phone prompt you to permission requests, please select 'allow' so as to avoid the failure of receiving notifications, scanning QR code and remote camera functions because the APP doesn't get the permission from the phone. The permission request is regular and normal without consuming your phone's internet data or other message and application, it is only used for the Bluetooth connection between the APP and the watch.

9.3 Some Android system may mistakenly turn the APP off while cleaning up applications. Please keep checking and ensure the APP running on the background of your phone by following the steps: Setting - Application management - GloryFit Sport - Authority management - Background management - Running in the background (setting method

may vary with different phone models and versions).

9.4 Moderate tightness between the watch and your wrist is required for the accuracy of health test as too tight or too loose will incur inaccurate figures. Too tight will affect the blood flow while too loose will affect the monitor functions.

9.5 Please avoid collision with hard objects as it may broken glass.

9.6 Please use 5V, 1A version chargers, this watch does not support quick charge. Charge under watery (sweat) condition is prohibited to avoid short circuit and result in damage.

9.7 This watch is electronic monitoring product and the data is for reference only, can not be used as medical reference.

10 Common faults and troubleshooting methods

If the following problems occur in the use of the smart watch, please refer to the instructions. And if problems remain, please contact dealers of designated technicians.

10.1 Unable to boot the watch

10.1.1 May occur if the pressing of power button is not long enough, please press again for over 3 seconds

10.1.2 May occur if power is too low, please charge the watch instantly.

10.1.3 May occur if the watch has not been used for long time and the watch does not respond to normal charger, please use chargers in 5V/1V of output power to charge and

activate the watch.

10.2 Auto power off

May result from low battery, please charge the watch instantly.

10.3 Short battery life

10.3.1 may occur when the battery hasn't been fully charged, please ensure sufficient time for the charging (at least 2 hours is required)

10.3.2 Charger or data line may not working properly, please change a new one.

10.3.3 Please check the port of the data line and try again to ensure a proper connection.

10.4 Bluetooth hasn't connect to or unable to connect to the watch

10.4.1 Restart the watch

10.4.2 Turn off the Bluetooth of your phone, turn on the Bluetooth again and connect to the watch again.

10.5 Inaccurate sleep data

Sleep monitor is designed to imitate the natural pattern of falling asleep and waking up, please wear the watch regularly, otherwise deviation may occur if going to bed late or only wear while sleeping. There may not sleeping data generated if go to bed at day time as the defaulted sleeping time is preset to between 18:00 pm to12:00 am.
