## Quick Setup Guide

### QN-I-220

DUAL-BAND, 802.11AC, 2X2 WAVE 2  
INDOOR ACCESS POINT

This Quick Setup Guide provides step-by-step instructions on how to set up Quantum Networks Access Point. After completing the steps described in this Guide, you will be able to install the Access Point (AP) on site and provide wireless network access to users.

#### BEFORE YOU BEGIN

Your Quantum Networks Access Point can be managed either by Quantum Networks Cloud Controller or can work in Standalone Mode.

To manage Access Point from Cloud Controller, please follow Step 4 first then Step 1 ahead. For Standalone Mode, continue with Step 1 ahead.

#### PACKAGE CONTENTS

- Quantum Networks Access Point
- Wall Mounting Kit
- Access Point Quick Setup Guide

#### SETUP REQUIREMENTS

- Access Point must have internet access during initial setup for the first time to activate the device, warranty & support.

### Step 1: Access Point Initial Configuration

- Provide Internet access to ETH0 port of the Access Point,
- Access Point default SSID is QN\_XX:XX (where XX:XX are last four digits of Access Point MAC Address),
- Connect to QN\_XX:XX SSID and browse Access Point default IP 169.254.1.1
- Do IPv4 setup by selecting required option DHCP, Static or PPPoE, and click Next. (The device will auto check internet connectivity. If any of the test services get failed, an error message would be shown),
- On successful IP setup, Operation Mode setup screen would appear. Quantum Networks Access Point can be configured in two modes:
  - Standalone Mode (Independent management of each Access Point) please go to Step 2,
  - Quantum Networks Cloud Controller mode (Centralized management of Access Points using Quantum Networks cloud) please go to Step 3,

### Step 2: Access Point quick configuration in Standalone Mode

- Select Operation Mode as Standalone,
- Admin can enable Access Point as a Gateway AP (In this mode, device connects to the internet directly and shares internet access to multiple wired and wireless devices. NAT and DHCP server are enabled by default) or it will work as a Bridge (In this mode, device connects to a wired router via Ethernet cable) by default. Select mode and click Next,
  - To configure Access Point as a Bridge, follow below:
    - Configure WLAN (SSID) parameters and click Next,
    - Configure Local subnet and click Next,
    - Set device Username and Password under Device Login User option and click Next,
    - Configuration Summary screen will appear. Check and click Reconfigure to edit or change parameter, or click Finish to complete the basic configuration,
  - To configure Access Point as a Bridge, follow below:
    - Configure WLAN (SSID) parameters and click Next,
    - Set device Username and Password under Device Login User option and click Next,
    - Configuration Summary screen will appear. Check and click Reconfigure to edit or change parameter, or click Finish to complete the basic configuration,

### Step 3: Access Point quick configuration in Cloud Controlled Mode

- Select Operation Mode as Cloud Controlled,
- Create account to access Quantum Networks Cloud under Cloud Controller Authentication option and click Next,
- Admin can enable Access Point as a Gateway Access Point or it will work as Bridge by default. Select mode and click Next,
  - To configure Access Point as a Gateway, follow below:
    - Configure WLAN (SSID) parameters and click Next,
    - Configure Local subnet and click Next,
    - Configuration Summary screen will appear. Check and click Reconfigure to edit or change parameter, or click Finish to complete the basic configuration,
  - To configure Access Point as a Bridge, follow below:
    - Configure WLAN (SSID) parameters and click Next,
    - Configuration Summary screen will appear. Check and click Reconfigure to edit or change parameter, or click Finish to complete the basic configuration,
  - If you don't want to create SSID now, click Skip at WLAN (SSID) option. It will redirect to Configuration Summary,
