GATE COMPATIBILITY AND INSTALLATION GUIDE

- 1 Use the Gate block to ensure your door matches the thickness of the block, and that the deadbolt is separate from the door handle.
- 2 If your door is **thinner**, use appropriate number of shims provided to match thickness.
- 3 Detach battery and remove orange sticker. If keypad fails to light up, the battery may need to be charged.
- 4 Download "Gate Labs Door" from the App Store or Google Play. Follow instructions and pair Gate with your home Wi-Fi. Select "allow" Gate to send you notifications. Select "right" door orientation (you may need to change this selection to "left" after you install Gate on your door).
- 5 Confirm Gate has a strong Wi-Fi connection and has solid video streaming from **outside** your door.
- 6 Completely remove and put aside your existing deadbolt/lock.
- 7 Remove Gate from block by detaching battery and unscrewing the two screws visible through holes in the rear. Also remove the deadbolt and the front keypad housing from the block.
- 8 Install the new deadbolt ensuring it's in the **unlocked** position. Then attach the front keypad housing aligning the flat black shaft **vertically** into the deadbolt center and secure it to the rear part with its two screws. Attach the battery and confirm the keypad lights up.
- 9 In the mobile app go to settings, then "Gate settings", then "Door Orientation" and choose the correct orientation for your door.
- 10 Gate is now ready to serve you.
