

Label and Location

Label

The North American variant of the A-SAFE Gateway will be affixed with the above label detailing the product Name, Part Number, Serial Number, Company Contact Details, Regulatory Information and User Installation Aids.

The Label is printed Indelibly and laminated to prevent wear.

The Label uses Permanent Adhesive to prevent removal.

The Smallest font size used is 7pt and is clearly legible when holding the product in hand.

The Label size is 98mm x 65mm.

Location

The Identification label of the Gateway can be found on the rear of the product within a recessed cavity on the enclosure to prevent damage to the label.

The label will be fitted to the Gateway at the end of the production line and will be automatically printed for each part in order to maintain quality standards.

The Gateway test procedure includes visual inspection and scanning of the label to ensure suitable print quality.

Early Revision Label

A total of 4 units were manufactured with the below labels. These units were used for Testing and internal use only but have been included here as they may show on test reports and photographs. These units will be used for internal use only and will not be exported to North America. Electrically these two products are identical, the only difference being branding and minor printing changes.
