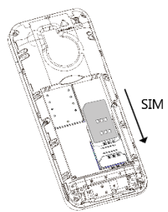
Presentation

Inserting the SIM card

1. Remove the back cover.
2. Remove the battery.
3. Place the SIM card in the socket.
4. Replace the battery and the back cover.



Charging the phone

Connect the charger to an electrical outlet , and connect the plug of the charger into the USB port on the top of your phone.

The mobile screen will display the charging indicator.

After charging is finished, just pull out the plug.

Switching on the phone

To switch on the phone, long press on the power on/off key .

Adding a new contact

You can use the phone's contacts feature to save the contact name, number and caller ringtone. The phone can save 300 phonebook contacts. SIM card number of contacts stored s vary depending on its capacity.

1. From the idle screen, press the upper right - key and enter the **Contacts** menu
2. In the contacts list, press the up navigation key to select **Add new contact**.
3. Fill in the fields.
4. Press the upper left key to select **Save**.

Note: The new contact is then displayed in contact

Writing and sending an SMS

Message allows you to send, receive and edit messages.

1. Select **Messages** from the **Menu** screen.
2. Select **Write message**
3. Press the # key to switch the input method, and type your message in the text box.
4. Once your message is written, press the upper left key to enter the **Options**, menu.
5. Select **Send to** and select the recipient's number or add it from phonebook .

Launching a phone call

To launch a call, do as follows:

1. From the idle screen, start typing the number directly, or enter select the number in the **Contacts** menu.
2. Press the key to launch the call.
3. Press the key to end the call

Setting date and time

1. Enter the **Menu** screen.
2. Select **Settings**.
3. Select **Phone settings**.
4. Select **Time and date**.
5. You can manually set the date and time.
6. Press the left validation key to save.

Setting an alarm

To set an alarm:

1. Enter the **Menu** screen.
2. Select **Organizer / Alarm**.
3. Edit the alarm's settings and press the validation key to save.

Using the device as a torch

To use the torch:

1. Enter the **Menu** screen.
2. Select **Torch Light**.
3. Press the validation key to switch on the torch.
4. Press the validation key once again to switch off the torch.

In the idle screen, you can also long press the **8** key, switch on/off the torch quickly.

Using FM radio

To use the FM radio :

1. Enter the **Menu** screen.
2. Select **FM radio** and press the validation key.

To switch channel, use the navigation key.

To adjust the volume, press the */# keys.

Press the right soft key or the power on/off key to exit FM radio or play FM in the background.

Using the power saving mode

To save your battery while your phone is in standby:

1. Enter **Menu** Screen.
2. Select **Power Saver** and select **Power saving mode**, the device will automatically switch to the lowest power usage state.

You could also manually make the setting to optimize the power usage in **Low power mode** option.

FCC Regulations

（15C）This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the manufacturer could void the user's authority to operate the equipment.

The antenna(s) used for this transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

(15B)This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules.

These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Radio Frequency (RF) Energy

This phone is designed and manufactured not to exceed the emission limits for exposure to radio frequency (RF) energy set by the Federal Communications Commission of the United States.

During SAR testing, this device was set to transmit at its highest certified power level in all tested frequency bands, and placed in positions that simulate RF exposure in usage against the head with no separation, and near the body with the separation of 10 mm. Although the SAR is determined at the highest certified power level, the actual SAR level of the device while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output.

The exposure standard for wireless devices employing a unit of measurement is known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 W/kg.

This device is complied with SAR for general population /uncontrolled exposure limits in ANSI/IEEE C95.1-1992 and had been tested in accordance with the measurement methods and procedures specified in IEEE1528.

The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines. SAR information on this model phone is on file with the FCC and can be found under the Display Grant section of www.fcc.gov/oet/ea/fccid after searching on FCC ID: 2AN42-AX1811

For this device, the highest reported SAR value for usage against the head is 1,082W/kg, and for usage near the body is 1,370W/kg.

While there may be differences between the SAR levels of various phones and at various positions, they all meet the government requirements.

SAR compliance for body-worn operation is based on a separation distance of 10 mm between the unit and the human body. Carry this device at least 10 mm away from your body to ensure RF exposure level compliant or lower to the reported level. To support body-worn operation, choose the belt clips or holsters, which do not contain metallic components, to maintain a separation of 10 mm between this device and your body.

RF exposure compliance with any body-worn accessory, which contains metal, was not tested and certified, and using such body-worn accessory should be avoided.

Quick Start Guide

Sagetel AX1811
