A detailed view of a custom-built Logitech G502 mouse. The device is shown in a disassembled state, revealing its internal components. The base is a custom-milled black plastic shell, which is currently open, exposing a green printed circuit board (PCB) populated with various electronic components, including a microcontroller, capacitors, and a battery. A custom black button with a silver circular face is mounted on the top of the shell. The mouse is resting on a light-colored wooden surface.
