4. REQUIREMENT

RF EXPOSURE LIMIT

Frequency Range (MHz)	E-field Strength (E) (V/m)	Magnetic Field Strength (H) (A/m)	Power Density (S) (mW/cm ²)	Averaging Time E ² , H ² or S (Minutes)
0.3 -- 1.34	614	1.63	(100)*	30
1.34 -- 30	824/f	2.19/f	(180/f ²)*	30
30 -- 300	27.5	0.073	0.2	30
300 -- 1500	--	--	f/1500	30
1500 -- 100,000	--	--	1.0	30

METHOD OF MEASUREMENT

- The RF exposure test was performed in shielded chamber.
- The measurement probe was placed at test distance (15cm) which is between the edge of the charger and the geometric centre of probe.
- The measurement probe used to search of highest strength.
- The highest emission level was recorded and compared with limit as soon as measurement of each points (A, B, C, D, E) were completed.
- The EUT were measured according to the dictates of KDB 680106D01v03.

BLOCK DIAGRAM OF TEST SETUP

Note: As bottom point is not required to test for desktop devices, so we scanning all the surfaces and recorded the worst level in F.

**EQUIPMENT APPROVAL CONSIDERATIONS**

The EUT does comply with KDB 680106D01v03.

1) Power transfer frequency is less than 1MHz.

Yes; the device operated in the frequency range from 110kHz to 205kHz.

2) Output power from each primary coil is less than or equal to 15 watts.

Yes; the maximum output power of each primary coil is 10 watts.

3) The transfer system includes only single primary and secondary coils. This includes charging systems that may have multiple primary coils and clients that are able to detect and allow coupling only between individual pairs of coils.

No, the transmitter includes two coils, but the coils and circuit before antenna are the same, only one coil can be active at one time.

4) Client device is placed directly in contact with the transmitter.

Yes; Client device is placed directly in contact with the transmitter.

5) Mobile exposure conditions only (portable exposure conditions are not covered by this exclusion).

Yes; The EUT is a mobile device.

6) The aggregate H-field strengths at 15 cm surrounding the device and 20 cm above the top surface from all simultaneous transmitting coils are demonstrated to be less than 50% of the MPE limit.

The EUT field strength levels are bigger than 50% of the MPE limit.

MEASURING INSTRUMENT USED

Equipment	Manufacturer	Model No.	Serial No.	Last Cal.	Due. Date
Electric and Magnetic Field Analyzer	Narda	EHP-200A	170WX90204	April 21, 2019	April 21, 2020

**H FIELD STRENGTH**

Test mode for wireless charger:

Mode	Description
Mode 1	Power Bank charging by charging base and with 5W wireless charging load
Mode 2	Power Bank charging by type-C (5V/2A) and with 5W wireless charging load
Mode 3	Power Bank charging by type-C (9V/2A) and with 5W wireless charging load
Mode 4	Power Bank with USB A 5V/2.4A load and 5W wireless charging load
Mode 5	Power Bank with 7.5W wireless charging load
Mode 6	Power Bank with 10W wireless charging load

Note 1: Because the coils and circuit before antenna are the same, Coil 1, Coil 2 and Coil 1+Coil 2 (Only one coil can be activated) modes had been conducted pre-scanned to determine the worst-case mode from both coils, but only the worst data were recorded in this report.

Note 2: The wireless charging function only support 5W output but USB A port can't work when the power bank was under charged.

Note 3: The wireless charging function only support 5W output when the USB A port discharging.

Note 4: When the wireless charging output is more than 7.5W, the USB A output port can't work normally.
