- Consult the dealer or an experienced radio/TV technician for help.

### RF Exposure Information

SAR tests are conducted using standard operating positions accepted by the FCC/ ISEDC with the device transmitting at its highest certified power level in all tested frequency bands, although the SAR is determined at the highest certified power level, the actual SAR level of the device while operating can be well below the maximum value, in general, the closer you are to a wireless base station antenna, the lower the power output.

Before a new model device is available for sale to the public, it must be tested and certified to the FCC/ ISEDC that it does not exceed the exposure limit established by the FCC/ ISEDC. Tests for each device are performed in positions and locations as required by the FCC/ ISEDC.

For face-up, 0mm was used for test, this equipment should be installed and operated with minimum distance 0mm

For body worn operation, this model device has been tested and meets the FCC / ISEDC RF exposure guidelines when used with an accessory designated for this product or when used with an accessory that contains no metal and that positions the handset a minimum of 0mm from the body.

Non-compliance with the above restrictions may result in violation of RF exposure guidelines.
