### Scope

This document reports the eirp measurement done on CTSN-09S product and power measured at the connector. Antenna Gain is calculated using the following formula:

$$G_a = eirp - P_T$$

where,

$eirp$  = Effective Isotropic Radiated Power (dBm)

$P_T$  = Output power of the transmitter (dBm)

$G_a$  = Antenna Gain (dBi)

$P_T$  already takes into account the loss of the cable used during the conducted measurement

### Samples Tested

Product Name	HW Ver	ID	SW Ver	Notes
PSN2-09S	V1.0	RT_L	1.0	Antenna connected to the Silicon Labs EFR32BG22 RF out as in the field configuration SW in line with the field application, but RF out set as continuous transmitting on the low channel 2402 MHz using the Direct Test Mode settings available
