TEST REPORT

Application No.:	HKEM1807000554HS
Applicant:	ROOT ROBOTICS, INC.
FCC ID:	2AO4U-RT1
Product Description:	Root Robot
Model No.:	RT1
Country of Origin:	China
Country of Destination:	US
Age Grading:	Above 3yrs
Standards:	47 CFR Part 15, Subpart C 15.247
Date of Receipt:	2018-07-06
Date of Test:	2018-07-20 to 2018-07-23
Date of Issue:	2018-07-23
Test Result :	Pass*

* In the configuration tested, the EUT detailed in this report complied with the standards specified above. Please refer to section 3 of this report for further detail.

Authorized Signature:

CHEN Jian-feng, Jeffrey

The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards. Any mention of SGS International Electrical Approvals or testing done by SGS International Electrical Approvals in connection with, distribution or use of the product described in this report must be approved by SGS International Electrical Approvals in writing.

The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the federal government. All test results in this report can be traceable to National or International Standards.

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at http://www.sgs.com/en/Terms-and-Conditions.aspx and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at http://www.sgs.com/en/Terms-and-Conditions/Terms-e-Document.aspx. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein. Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction form exercising all their rights and obligations under the transaction documents. This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 30 days only.

2 Test Summary

TEST	TEST REQUIREMENT	TEST METHOD	RESULT
Antenna Requirement	t FCC PART 15 C FCC PART 15 C section 15.247 (c) and section 15.247 (c) ar Section 15.203 Section 15.203		PASS
6 dB Bandwidth	FCC PART 15 C section 15.247 (a)(2)	ANSI C63.10 Clause 11.8.1	PASS

4 General Information

4.1 Client Information

Applicant:	ROOT ROBOTICS, INC.
Address of Applicant:	2067 MASSACHUSETTS AVE.5 TH FLOOR,
	Cambridge, MA, 02140, United states

4.2 General Description of E.U.T.

Product Name:	Root Robot
Model No.:	RT1

4.3 Details of E.U.T.

2402 MHz to 2480 MHz	
GFSK	
DSSS with Adaptive	
(Only one adaptive mode is implemented and could not operate in a non-adaptive mode.)	
40 Channels	
2 MHz	
Continuous operation possible for testing purposes	
Integral antenna	
0dBi	
V4.0 BLE	
This test report is for BLE mode	
Bluetooth	
DC 3.7V (Rechargeable batt. x 1)	
DC 3.7V	
unscreened USB cable :100cm for battery charging	

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at http://www.sgs.com/en/Terms-and-Conditions.aspx and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at http://www.sgs.com/en/Terms-and-Conditions/Terms-eDocument.aspx. This document is unlawful and offenders may be prosecuted to the fullest extent of the law.

4.4 Description of Support Units

The EUT has been tested as an independent unit for fixed frequency by testing lab.

4.5 Deviation from Standards

Biconical and log periodic antennas were used instead of dipole antennas.

4.6 Abnormalities from Standard Conditions

None.

4.7 Other Information Requested by the Customer

None.

4.8 Test Location

All tests were performed at:

SGS IECC Limited (Member of the SGS Group (SGS SA)) No. 16-B, Yip Wo Street, On Lok Tsuen, Fanling, N.T., Hong Kong Tel: +852 2305 2570 Fax: +852 2756 4480. No tests were sub-contracted.

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at http://www.sgs.com/en/Terms-and-Conditions.aspx and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at http://www.sgs.com/en/Terms-and-Conditions/Terms

4.9 Test Facility

The test facility is recognized or accredited by the following organizations:

• HOKLAS (Lab Code: 125)

SGS IECC Limited has been accepted by HKAS Executive, on the recommendation of the Accreditation Advisory Board, as a HOKLAS Accredited Laboratory, this laboratory meets the requirements of ISO/IEC 17025:2005 an it has been accredited for performing specific test as listed in the scope of accreditation within the test category of Electrical and Electronic Products.

• FCC Recognized Accredited Test Firm(CAB Registration No.: 446297)

SGS IECC Limited has been accredited and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Designation Number: HK0010, Test Firm Registration Number: 446297.

• Industry Canada (Registration No.: 5193A-2)

The 3m Alternative Semi-anechoic chamber of SGS IECC Limited has been registered by Certification and Engineering of Industry Canada for radio equipment testing with Registration No. **5193A-2**.

4.10 Measurement Uncertainty (95% confidence levels, k=2)

No.	ltem	Measurement Uncertainty
1	Radio frequency	7.25 x 10 ⁻⁸
2	RF power (conducted) 0.75dB	
2	Dedicted Sourious emission	4.5dB (30MHz-1GHz)
3	Radiated Spurious emission	4.8dB (1GHz-25GHz)
4	Temperature test	1°C
5	Humidity test	3%
6	DC and low frequency voltages test	0.5%

6 Test Results

6.1 E.U.T. test conditions

Test Voltage:	DC 3.7V
Temperature:	20.0 - 25.0 °C
Humidity:	38-50 % RH
Atmospheric Pressure:	1000 - 1010 mbar
Requirements:	 15.31(e): For intentional radiators, measurements of the variation of the input power or the radiated signal level of the fundamental frequency component of the emission, as appropriate, shall be performed with the supply voltage varied between 85% and 115% of the nominal rated supply voltage. For battery operated equipment, the equipment tests shall be performed using a new battery. 15.32: Power supplies and CPU boards used with personal computers and for which separate authorizations are required to be obtained shall be tested as follows: Testing shall be in accordance with the procedures specified in Section 15.31 of this part.
Test frequencies and frequency range:	According to the 15.31(m) Measurements on intentional radiators or receivers, other than TV broadcast receivers, shall be performed and, if required, reported for each band in which the device can be operated with the device operating at the number of frequencies in each band specified in the following table:
	According to the 15.33 (a) For an intentional radiator, the spectrum shall be investigated from the lowest radio frequency signal generated in the device, without going below 9 kHz, up to at least the frequency shown in the following table:

Number of fundamental frequencies to be tested in EUT transmit band

Frequency range in which	Number of	Location in frequency range
device operates	frequencies	of operation
1 MHz or less	1	Middle
1 MHz to 10 MHz	2	1 near top and 1 near bottom
Mare then 10 Mile	2	1 near top, 1 near middle and 1
More than TO MHZ	3	near bottom

Frequency range of radiated emission measurements

Lowest frequency generated in the device	Upper frequency range of measurement	
9 kHz to below 10 CHz	10th harmonic of highest fundamental frequency or to 40 GHz,	
	whichever is lower	
At or above 10 GHz to below	5th harmonic of highest fundamental frequency or to 100 GHz,	
30 GHz	whichever is lower	
At or above 20 CHz	5th harmonic of highest fundamental frequency or to 200 GHz,	
	whichever is lower, unless otherwise specified

EUT channels and frequencies list:

Test frequencies are the lowest channel: 0 channel(2402MHz), middle channel: 19 channel (2440 MHz) and highest channel: 39 channel(2480 MHz)

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at http://www.sgs.com/en/Terms-and-Conditions.aspy and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at <a href="http://www.sgs.com/en/Terms-and-Conditions/Terms-an

6.2 Antenna Requirement

Standard requirement

15.203 requirement:

For intentional device. According to 15.203. an intentional radiator shall be designed to Ensure that no antenna other than that furnished by the responsible party shall be used with the device.

15.247(c) (1)(i) requirement:

(i) Systems operating in the 2400-2483.5 MHz bands that are used exclusively for fixed. Point-to-point operations may employ transmitting antennas with directional gain greater than 6 dBi provided the maximum conducted output power of the intentional radiator is reduced by 1 dB for every 3 dB that the directional gain of the antenna exceeds 6 dBi.

EUT Antenna

The antenna is PCB Layout antenna and no consideration of replacement. The best-case gain of the antenna is 0dBi.

Test result: The unit does meet the FCC requirements.

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at http://www.sgs.com/en/Terms-and-Conditions.aspx and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at <a href="http://www.sgs.com/en/Terms-and-Conditions/Terms-and-Conditiona/Terms-and-Conditions/Terms-and-Conditions/Terms-and-Conditions/Terms-and-Conditions/Terms-and-Conditions/Terms-and-Conditions/Terms-and-Conditions/Terms-and-Conditions/Terms-and-Conditions/Terms-an

6.3 6 dB Bandwidth

Test Requirement:	FCC Part 15 C section 15.247				
	(a)(2) Systems using digital modulation techniques may operate in the 902-928 MHz, 2400-2483.5MHz, and 5725-5850 MHz bands. The minimum 6 dB bandwidth shall be at least 500 kHz.				
Test Method:	ANSI C63.10 Clause 11.8.1				
Test Status:	Enter test mode for the product. Test in Channel lowest (2402MHz), middle (2440MHz) and highest (2480MHz), keep in continuously transmitting status.				

Test Configuration:

Ground Reference Plane

Test Procedure:

- 1. Remove the antenna from the EUT and then connect a low attention attenuation RF cable (cable loss =1.5dB) from the antenna port to the spectrum.
- 2. Set the spectrum analyzer: RBW=100KHz. VBW = 300KHz. Sweep = auto; Detector Function = Peak. Trace = Max Hold, Set span to encompass the entire emission bandwidth of the signal.
- 3. Mark the peak power frequency and -6dB (upper and lower) power frequency.
- 4. Repeat until all the test status is investigated.
- 5. Report the worst case.

6.4 Maximum Peak Output Power

Test Requirement:	FCC Part 15 C section 15.247					
	(b)(3) For systems using digital modulation in the 902-928 MHz,					
	2400-2483.5 MHz, and 5725-5850 MHz bands: 1 Watt.					
	Except as shown in paragraph (c) of this section, if transmitting					
	antennas of directional gain greater than 6 dBi are used, the conducted					
	output power from the intentional radiator shall be reduced below the					
	stated values in paragraphs (b) (1), (b) (2), and (b) (3) of this section, as					
	appropriate, by the amount in dB that the directional gain of the antenna					
	exceeds 6 dBi.					
Test Method:	ANSI C63.10 Clause 11.9.1.1					
Test Status:	Enter test mode for the product. Test in Channel lowest (2402MHz),					
	middle (2440MHz) and highest (2480MHz), keep in continuously					
	transmitting status.					

Test Configuration:

Ground Reference Plane

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at http://www.sgs.com/en/Terms-and-Conditions.aspx and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at http://www.sgs.com/en/Terms-and-Conditions/Terms-eDocument.aspx. Test Procedure:

1. Remove the antenna from the EUT and then connect a low attention attenuation RF cable

(Cable loss =1.5dB) from the antenna port to the spectrum.

- 2. Set the RBW≥DTS bandwidth
- 3. Set the VBW \geq 3 x RBW
- 4. Set the span \ge 3 x RBW.
- 5. Detector = peak.
- 6. Sweep time = auto couple.
- 7. Trace mode = max hold.
- 8. Use peak marker function to determine the peak amplitude level.
- 9. Report the worst case.

Test result:

Channel No.	Frequency	Mada	Doto Boto	Measured Channel Power	er Limit 1W(30dBm)	Decult
Channel No 0 19 39	(MHz)	wode	Dala Rale	(dBm)	LIIIII	Result
0	2402		1Mbps	-11.92		Pass
19	2440	GFSK	1Mbps	<u>-11.71</u>	1W(30dBm)	Pass
39	2480		1Mbps	-12.53		Pass

Remark: Level = Read Level + Cable Loss.

The unit does meet the FCC requirements.

6.5 Peak Power Spectral Density

Test Requirement:	FCC Part 15 C section 15.247
	(e) For digitally modulated systems, the power spectral density
	conducted from the intentional radiator to the antenna shall not be
	greater than 8 dBm in any 3 kHz band during any time interval of
	continuous transmission.
	This power spectral density shall be determined in accordance with the
	provisions of paragraph (b) of this section. The same method of
	determining the conducted output power shall be used to determine the
	power spectral density.
Test Method:	ANSI C63.10 Clause 11. 10. 2
Test Status:	Enter test mode for the product. Test in lowest Channel 2402MHz,
	middle Channel 2440MHz and highest Channel 2480MHz, keep in
	continuously transmitting status.

Test Configuration:

Ground Reference Plane

Test Procedure:

- 1. Remove the antenna from the EUT and then connect a low attention attenuation RF cable (cable loss =1.5dB) from the antenna port to the spectrum analyzer or power meter.
- 2. Set the spectrum analyzer:
 - a) Set CENTER FREQUENCY = Frequency from Power Spectral Density Test Matrix (see 6.10.2)
 - b) Set SPAN = 20 MHz (For devices with a nominal 40 MHz BW, 50 MHz span will be needed)
 - c) Set REFERENCE LEVEL = 20 dBm
 - d) Set ATTENUATION = 0 dB (add internal attenuation, if necessary)
 - e) Set SWEEP TIME = Coupled
 - f) Set RBW = 3 kHz
 - g) Set VBW = 10 kHz
 - h) Set DETECTOR = Peak
 - i) Set MKR = Center Frequency

j) Set TRACE = CLEAR WRITE

Place the radio in continuous transmit mode. Set the TRACE to MAX HOLD, and after the trace stabilizes, the TRACE to VIEW. Set the marker on the peak of the signal and then adjust the center frequency of the spectrum analyzer to the marker frequency.

After viewing the EUT waveform on the spectrum analyzer, perform the following spectrum analyzer functions to capture the trace:

Set SPAN = 300 kHz

Set SWEEP TIME = 100 s

Set TRACE = MAX HOLD

Set MKR = PEAK SEARCH

- 3. Measure the Power Spectral Density of the test frequency with special test status.
- 4. Repeat until all the test status is investigated.
- 5. Report the worse case.

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at http://www.sgs.com/en/Terms-and-Conditions.aspx and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at http://www.sgs.com/en/Terms-and-Conditions/Terms-en-Document.aspx. 6.6 Conducted Spurious Emissions

Test Requirement:	FCC Part 15 C section 15.247				
	(d) In any 100kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating. the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100kHz bandwidth within the band that contains the highest level of the desired power. Based on either an RF conducted or a radiated measurement. Provided the transmitter demonstrates compliance with the peak conducted power limits.				
Test Method:	ANSI C63.10 Clause 11.11				
Test Status:	Enter test mode for the product. Test in lowest Channel 2402MHz, middle Channel 2440MHz and highest Channel 2480MHz, keep in continuously transmitting status.				

Test Configuration:

Test Procedure:

- 1. Remove the antenna from the EUT and then connect a low RF cable from the antenna port to the spectrum analyzer or power meter.
- 2. Set the spectrum analyzer: RBW=100 kHz, VBW = 300kHz. Sweep = auto; Detector Function = Peak. Trace = Max Hold, Scan up through 10th harmonic.
- 3. Measure the Conducted Spurious Emissions of the test frequency with special test status.
- 4. Repeat until all the test status is investigated.
- 5. Report the worse case.

6.7 Radiated Spurious Emissions

Test Requirement:	FCC Part 15 C section 15.247
	(d) In any 100kHz bandwidth outside the frequency band in which the
	spread spectrum or digitally modulated intentional radiator is operating.
	The radio frequency power that is produced by the intentional radiator shall
	be at least 20 dB below that in the 100kHz bandwidth within the band that
	Contains the highest level of the desired power, based on either an RF
	conducted or a radiated measurement, and provided the transmitter
	demonstrates compliance with the peak conducted power limits.
Test Method:	ANSI C63.10 Clause 6.4, 6.5 and 6.6
Test Status:	Enter test mode for the product. Test in lowest channel 2402 MHz and
	highest channel 2480 MHz, keep in continuously transmitting status with
	GFSK modulation.
Detector:	For PK value:
	RBW = 1 MHz for $f \ge 1$ GHz, 100 kHz for $f < 1$ GHz
	$VBW \ge RBW$
	Sweep = auto
	Detector function = peak
	Trace = max hold
	For AV value:
	RBW = 1 MHz for $f \ge 1$ GHz, 100 kHz for $f < 1$ GHz
	VBW =10Hz
	Sweep = auto
	Detector function = peak
	Trace = max hold
15.209 Limit:	40.0 dBµV/m between 30MHz & 88MHz
	43.5 dBµV/m between 88MHz & 216MHz
	46.0 dBμV/m between 216MHz & 960MHz
	54.0 dBμV/m above 960MHz

Test Configuration:

1) 30 MHz to 1 GHz emissions:

2) 1 GHz to 40 GHz emissions:

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at http://www.sgs.com/en/Terms-and-Conditions.aspx and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at http://www.sgs.com/en/Terms-and-Conditions/Terms

Test Procedure:

Test site with RF absorbing material covering the ground plane that met the site validation criterion called out in CISPR 16-1-4:2007 was used to perform radiated emission test above 1 GHz.

The receiver scanned from the lowest frequency generated within the EUT to 25GHz.When an emission was found, the table was rotated to produce the maximum signal strength. An initial pre-scan was performed for in peak detection mode using the receiver. The EUT was measured for both the Horizontal and Vertical polarities and performed a pre-test three orthogonal planes. For intentional radiators, measurements of the variation of the input power or the radiated signal level of the fundamental frequency component of the emission, as appropriate, shall be performed with the supply voltage varied between 85% and 115% of the nominal rated supply voltage. The worst-case emissions were reported.

From 30MHz to 1GHz, read the Quasi-Peak field strength of the emissions with receiver QP detector RBW=120KHz.

Above 1GHz, read the Peak field strength and Average field strength.

Read the Peak field strength through RBW=1MHz,VBW=3MHz in spectrum analyzer setting;

Read the Average field strength through RBW=1MHz,VBW=10Hz in spectrum analyzer setting;

While maintaining all of the other instrument settings. This peak level, once corrected, must comply with the limit specified in Section 15.209. If the dwell time per channel of the hopping signal is less than 100 ms, then the average field strength reading obtained with the 10 Hz VBW may be further adjusted by a "duty cycle correction factor", derived from 20log(dwell time/100 ms), in an effort to demonstrate compliance with the 15.209 limit.

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at http://www.sgs.com/en/Terms-and-Conditions.aspx and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at <a href="http://www.sgs.com/en/Terms-and-Conditions/Terms-an

1~25 GHz Harmonics & Spurious Emissions. Peak & Average Measurement:

Remark:

1). The field strength is calculated by adding the Antenna Factor. Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows:

Final Test Level = Receiver Reading + Antenna Factor + Cable Loss – Preamplifier Factor.

- 2). As shown in Section, for frequencies above 1000 MHz. the above field strength limits are based on average limits. However, the peak field strength of any emission shall not exceed the maximum permitted average limits specified above by more than 20 dB under any condition of modulation.
- 3). The test only perform the EUT in transmitting status since the test frequencies were over 1GHz only required transmitting status.

Test result: The unit does meet the FCC requirements.

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at http://www.sgs.com/en/Terms-and-Conditions.aspy and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at <a href="http://www.sgs.com/en/Terms-and-Conditions/Terms-an

6.7.2 Radiated Emissions which fall in the restricted bands

Test Requirement:	FCC Part 15 C section 15.247				
	(d) In addition, radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a) (see Section 15.205(c)).				
Test Method:	ANSI C63.10 Clause 6.4, 6.5 and 6.6				
Test Status:	Enter test mode for the product. Test in lowest channel 2402 MHz and highest channel 2480 MHz, keep in continuously transmitting status with GFSK modulation.				
Test site:	Measurement Distance: 3m (Semi-Anechoic Chamber)				
Limit:	40.0 dBμV/m between 30MHz & 88MHz;				
	43.5 dBμV/m between 88MHz & 216MHz;				
	46.0 dBμV/m between 216MHz & 960MHz;				
	54.0 dBμV/m above 960MHz.				
Detector:	For PK value:				
	RBW = 1 MHz for $f \ge 1$ GHz, 100 kHz for $f < 1$ GHz VBW \ge RBW				
	Sweep = auto				
	Detector function = peak				
	Trace = max hold				
	For AV value:				
	RBW = 1 MHz for $f \ge 1$ GHz, 100 kHz for $f < 1$ GHz				
	VBW =10Hz				
	Sweep = auto				
	Detector function = peak				
	race = max noid				

Section 15.205 Restricted bands of operation.

(a) Except as shown in paragraph (d) of this section. only spurious emissions are permitted in any of the frequency bands listed below:

MHz	MHz	MHz	GHz
0.090 - 0.110	16.42 - 16.423	399.9 - 410	4.5 - 5.15
¹ 0.495 - 0.505	16.69475 - 16.69525	608 - 614	5.35 - 5.46

6.8 Band Edges Requirement

Test Requirement:	FCC Part 15 C section 15.247
	 (d) In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating. The radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power. Based on either an RF conducted or a radiated measurement. Provided the transmitter demonstrates compliance with the peak conducted power limits.
Frequency Band:	2400 MHz to 2483.5 MHz
Test Method:	ANSI C63.10 clause 11.13.3.2
Test Status:	Enter test mode for the product. Test in lowest channel 2402 MHz and highest channel 2480 MHz, keep in continuously transmitting status with GFSK modulation.

Test Configuration:

Test Procedure:

- 1. Remove the antenna from the EUT and then connect a low RF cable from the antenna port to the spectrum analyzer or power meter.
- 2. Set instrument center frequency to the frequency of the emission to be measured (must be within 2MHz of the authorized band edge).
- 3. Set span to 2MHz,
- 4. RBW=100kHz,
- 5. VBW≥3×RBW
- 6. Detector=peak
- 7. Sweep time =auto,

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at http://www.sgs.com/en/Terms-and-Conditions.aspy and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at <a href="http://www.sgs.com/en/Terms-and-Conditions/Terms-an

- 8. Trace mode=max hold.
- 9. Allow sweep to continue until the trace stabilizes (required measurement time may increase for low duty cycle applications)
- 10. Compute the power by integrating the spectrum over 1MHz using the analyzer's band power measurement function with band limits set equal to the emission frequency(f_{emission})±0.5MHz.If the instrument does not have a band power function,the sum the amplitude levels(in power units) at 100kHz intervals extending across the 1MHz spectrum defined by femission±0.5MHz.
