TEST REPORT

No.B19N00695-HAC RF

For

Q INNOVATIONS PRIVATE LIMITED

Mobile Phone

Model Name: Q28A, Q28C

With

Hardware Version: 01

Software Version: 9AS8, 9AT1

FCC ID: 2AO6NF001

Results Summary: M Category = M4

Issued Date: 2019-04-16

Designation Number: CN1210

Note:

The test results in this test report relate only to the devices specified in this report. This report shall not be reproduced except in full without the written approval of SAICT.

Test Laboratory:

Shenzhen Academy of Information and Communications Technology

Building G, Shenzhen International Innovation Center, No.1006 Shennan Road, Futian District, Shenzhen, Guangdong, P. R. China 518026.

REPORT HISTORY

Report Number	Revision	Issue Date	Description
B19N00695-HAC RF	Rev.0	2019-04-16	Initial creation of test report

TABLE OF CONTENT

1 Test Laboratory

1.1 Testing Location

Company Name:	Shenzhen Academy of Information and Communications Technology
Address:	Building G, Shenzhen International Innovation Center, No.1006 Shennan Road, Futian District, Shenzhen, Guangdong, P. R. China
Postal Code:	518026
Telephone:	+86-755-33322000
Fax:	+86-755-33322001

1.2 Testing Environment

Temperature:	18°C ~ 25°C
Relative humidity:	30% ~ 70%
Ground system resistance:	<4Ω
Ambient noise & Reflection:	< 0.012 W/kg

1.3 Project Data

Testing Start Date:	April 16, 2019
Testing End Date:	April 16, 2019

1.4 Signature

Li Yongfu
(Prepared this test report)

Zhang Yunzhuan
(Reviewed this test report)

Cao Junfei
Deputy Director of the laboratory
(Approved this test report)

2 Client Information

2.1 Applicant Information

Company Name:	Q INNOVATIONS PRIVATE LIMITED
Address /Post:	25, Shakuntala Farm, M G Road, Sultanpur, New Delhi-110030,
Contact:	Damon Han
Email:	damon.h@q-innovations.in
Telephone:	91-124-4648000/8111
Fax:	\

2.2 Manufacturer Information

Company Name:	Q INNOVATIONS PRIVATE LIMITED
Address /Post:	25, Shakuntala Farm, M G Road, Sultanpur, New Delhi-110030,
Contact:	Damon Han
Email:	damon.h@q-innovations.in
Telephone:	91-124-4648000/8111
Fax:	\

3 Equipment under Test (EUT) and Ancillary Equipment (AE)

3.1 About EUT

Description:	Mobile Phone
Model name:	Q28A,Q28C
Operating mode(s):	WCDMA Band 2 / 4 / 5,LTE Band 2/4/5/12/14, BT, Wi-Fi 2.4G
Note: Mobile Phone Q28C manufactured by Q INNOVATIONS PRIVATE LIMITED is a variant model based on Q28A for conformance test. According to “Justification Letter” provided by applicant, no test needs to been performed, all results are cited from the initial model.	

3.2 Internal Identification of EUT used during the test

EUT ID*	IMEI	HW Version	SW Version
EUT1	356228100004661	01	9AS8

*EUT ID: is used to identify the test sample in the lab internally.

Note: It is performed to test HAC with the EUT 1.

3.3 Internal Identification of AE used during the test

AE ID*	Description	Type	Manufacturer
AE1	Battery	Lithium-ion	Lishen Electronic Co.,Ltd.

*AE ID: is used to identify the test sample in the lab internally.

3.4 Air Interfaces / Bands Indicating Operating Modes

Air-interface	Band(MHz)	Type	C63.19 / tested	Simultaneous Transmissions	Name of Voice Service	Power Reduction
WCDMA	B2 / B4/ B5	VO	Yes	BT,WLAN	CMRS Voice	No
	HSPA	DT	No	BT,WLAN	NA	
LTE (FDD)	2/4/5/12/14	VD	No(1)	BT,WLAN	VoLTE	No
WLAN	2.4G	DT	No	WWAN	NA	No
BT	2.4G	DT	No	WWAN	NA	No

Remark:

1. The air interface is exempted from testing by low power exemption that its average antenna input power plus its MIF is ≤17dBm, and is rated as M4.

VO: Voice CMRS/PSTN Service Only

VD: Voice CMRS/PSTN and Data Service

DT: Digital Transport

* HAC Rating was not based on concurrent voice and data modes; Non-current mode was found to represent worst case rating for both M and T rating

4. Reference Documents

The following document listed in this section is referred for testing.

Reference	Title	Version
ANSI C63.19-2011	American National Standard for Methods of Measurement of Compatibility between Wireless Communication Devices and Hearing Aids	2011
KDB 285076 D01	Equipment Authorization Guidance for Hearing Aid Compatibility	v05

5 Modulation Interference Factor (MIF)

The HAC Standard ANSI C63.19-2011 defines a new scaling using the Modulation Interference Factor (MIF) which replaces the need for the Articulation Weighting Factor (AWF) during the evaluation and is applicable to any modulation scheme.

The Modulation Interference factor (MIF, in dB) is added to the measured average E-field (in dBV/m) and converts it to the RF Audio Interference level (in dBV/m). This level considers the audible amplitude modulation components in the RF E-field. CW fields without amplitude modulation are assumed to not interfere with the hearing aid electronics. Modulations without time slots and low fluctuations at low frequencies have low MIF values, TDMA modulations with narrow transmission and repetition rates of few 100 Hz have high MIF values and give similar classifications as ANSI C63-2007.

Definitions

ER3D, E-field probes have a bandwidth <10 kHz and can therefore not evaluate the RF envelope in the full audio band. DASY52 is therefore using the “indirect” measurement method according to ANSI C63.19-2011 which is the primary method. These near field probes read the averaged E-field measurement. Especially for the new high peak-to-average (PAR) signal types, the probes shall be linearized by probe modulation response (PMR) calibration in order to not overestimate the field reading.

The evaluation method or the MIF is defined in ANSI C63.19-2011 section D.7. An RMS demodulated RF signal is fed to a spectral filter (similar to an A weighting filter) and forwarded to a temporal filter acting as a quasi-peak detector. The averaged output of these filtering is called to a 1 kHz 80% AM signal as reference. MIF measurement requires additional instrumentation and is not well suited for evaluation by the end user with reasonable uncertainty It may alternatively be determined through analysis and simulation, because it is constraint and characteristic for a communication signal. DASY52 uses well defined signals for PMR calibration. The MIF of these signals has been determined by simulation and is automatically applied.

MIF values were not tested by a probe or as specified in the standards but are based on analysis provided by SPEAG for all the air interfaces (GSM, WCDMA, CDMA, LTE). The data included in this report are for the worst case operating modes. The UIDs used are listed below:

UID	Communication System Name	MIF (dB)
10011	UMTS-FDD (WCDMA)	-27.23
10170	LTE-FDD(SC-FDMA, 1RB, 20MHz, 16-QAM)	-9.76
10176	LTE-FDD(SC-FDMA, 1RB, 10MHz, 16-QAM)	-9.76

A PMR calibrated probe is linearized for the selected waveform over the full dynamic range within the uncertainty specified in its calibration certificate. ER3D, EF3D and EU2D E-field probes have a bandwidth <10 kHz and can therefore not evaluate the RF envelope in the full audio band. DASY52 is therefore using the \indirect" measurement method according to ANSI C63.19-2011 which is the primary method. These near field probes read the averaged E-field measurement. Especially for the new high peak-to-average (PAR) signal types, the probes shall be linearized by PMR calibration in order to not overestimate the field reading.

The MIF measurement uncertainty is estimated as follows, for modulation frequencies from slotted waveforms with fundamental frequency and at least 2 harmonics within 10 kHz:

0.2 dB for MIF -7 to +5 dB,
0.5 dB for MIF -13 to +11 dB
1 dB for MIF > -20 dB

6 Evaluation for low-power exemption

6.1 Product testing threshold

There are two methods for exempting an RF air interface technology from testing. The first method requires evaluation of the MIF for the worst-case operating mode. An RF air interface technology of a device is exempt from testing when its average antenna input power plus its MIF is ≤17 dBm for any of its operating modes. The second method does not require determination of the MIF. The RF emissions testing exemption shall be applied to an RF air interface technology in a device whose peak antenna input power, averaged over intervals ≤50 μs20, is ≤23 dBm. An RF air interface technology that is exempted from testing by either method shall be rated as M4.
The first method is used to be exempt from testing for the RF air interface technology in this report.

6.2 Conducted power

Band	power (dBm)	MIF (dB)	Sum (dBm)	HAC Test
WCDMA B2	23.0	-27.23	-4.23	No
WCDMA B4	23.0	-27.23	-4.23	No
WCDMA B5	24.0	-27.23	-3.23	No
LTE Band 2	24.0	-9.76	14.24	No
LTE Band 4	24.0	-9.76	14.24	No
LTE Band 5	24.1	-9.76	14.34	No
LTE Band 12	24.1	-9.76	14.34	No
LTE Band 14	23.1	-9.76	13.34	No

Note:

1. Power = Max turn-up limit
