Inquiry Details on 01/09/2024:

First category: Equipment Compliance Review

Second category: RF Exposure Compliance Distance

Third category:

Subject: Portable wireless charger uses MAGPy equipment for RF Exposure testing

Inquiry: Hello!

I have a combined product of Hydration Bottle + Power Bank + Wireless Charger. According to the structure of the product, I determine that it is a portable product. When using MAGPy equipment for RF Exposure testing on this product, can I directly

refer to (Currently Displaying Inquiry Tracking Number: 777548), according to the Swiss original method, set the probe tip of MAGPy, and the tested structure is the value extrapolated to 0mm?

FCC Response on 01/16/2024:

You may use the measurement value extrapolated to 0mm from the MAGPy; however, we also require that several other measurements be taken to validate the extrapolation performance (see KDB 680106 D01 v04 section 3.3).

As an administrative note, the correct first category is Equipment Compliance Review and the second category is Exposure Compliance Distance as stated in section 3.1 of KDB publication 680106 D01 v04.
