| APPLICANT  | : | Zhejiang Rexense IoT Technology Co., Ltd. |
|------------|---|---|
| EQUIPMENT  | : | 2.4G Zigbee Module                        |
| BRAND NAME | : | REXENSE                                   |
| MODEL NAME | : | REX3DT581                                 |
| FCC ID     | : | 2AOE2REX3DT581                            |
| STANDARD   | : | 47 CFR Part 2.1091                        |

The product evaluation date was started from Mar. 17, 2023 and completed on Mar. 17, 2023. We, Sporton International Inc. (Kunshan), would like to declare that the device has been evaluated in accordance with 47 CFR Part 2.1091 and FCC KDB 447498 D01 v06, and pass the limit. Without written approval of Sporton International Inc. (Kunshan), the test report shall not be reproduced except in full.

Si Zhang

### SPORTON LAB. RF Exposure Evaluation Report

## 2. Description of Equipment Under Test (EUT)

| Product Feature & Specification            |                           |  |  |  |  |
|--|---------------------------|--|--|--|--|
| EUT Type                                   | 2.4G Zigbee Module        |  |  |  |  |
| Brand Name                                 | XENSE                     |  |  |  |  |
| Model Name                                 | X3DT581                   |  |  |  |  |
| FCC ID                                     | E2REX3DT581               |  |  |  |  |
| Wireless Technology and<br>Frequency Range | gbee: 2405 MHz ~ 2480 MHz |  |  |  |  |
| Mode                                       | gbee: O-QPSK              |  |  |  |  |
| Antenna Gain                               | Zigbee: 1.0 dBi           |  |  |  |  |
| Antenna Type                               | PCB Antenna               |  |  |  |  |
| HW Version                                 | V2                        |  |  |  |  |
| SW Version                                 | V1                        |  |  |  |  |
| EUT Stage                                  | Identical Prototype       |  |  |  |  |

**Remark:** The above EUT's information was declared by manufacturer. Please refer to the specifications or user's manual for more detailed description.

### Comments and Explanations:

1. The declared of product specification for EUT presented in the report are provided by the manufacturer, and the manufacturer takes all the responsibilities for the accuracy of product specification.

The maximum RF output tune up power, antenna gain also the safe distance used for evaluate RF exposure were declared by manufacturer.

### 3. Maximum RF average output tune up power among production units

### <Zigbee>

| Mode   |        | Maximum Average power(dBm) |  |  |
|--------|--------|----------------------------|--|--|
| 2.4GHz | Zigbee | 11.00                      |  |  |

# 4. RF Exposure Limit Introduction

According to ANSI/IEEE C95.1-1992, the criteria listed in Table 1 shall be used to evaluate the environmental impact of human exposure to radio frequency (RF) radiation as specified in §1.1310.

| Frequency range<br>(MHz) | Electric field strength<br>(V/m) | Magnetic field strength<br>(A/m) | Power density<br>(mW/cm <sup>2</sup> ) | Averaging time<br>(minutes) |  |
|--------------------------|----------------------------------|----------------------------------|--|-----------------------------|--|
|                          | (A) Limits for O                 | ccupational/Controlled Expos     | sures                                  |                             |  |
| 0.3-3.0                  | 614                              | 1.63                             | *(100)                                 | 6                           |  |
| 3.0-30                   | 1842/                            | f 4.89/1                         | *(900/f2)                              | 6                           |  |
| 30-300                   | 61.4                             | 0.163                            | 1.0                                    | 6                           |  |
| 300-1500                 |                                  |                                  | f/300                                  | 6                           |  |
| 1500-100,000             |                                  |                                  | 5                                      | 6                           |  |
|                          | (B) Limits for Gene              | ral Population/Uncontrolled I    | Exposure                               |                             |  |
| 0.3-1.34                 | 614                              | 1.63                             | *(100)                                 | 30                          |  |
| 1.34-30 824              |                                  | f 2.19/f *(180/f2                |  | 30                          |  |
| 30-300 27.               |                                  | 0.073                            | 0.2                                    | 30                          |  |
| 300-1500                 |                                  |                                  | f/1500                                 | 30                          |  |
| 1500-100,000             |                                  |                                  | 1.0                                    | 30                          |  |

The MPE was calculated at 20 cm to show compliance with the power density limit.

The following formula was used to calculate the Power Density:

$$S = \frac{PG}{4\pi R^2}$$

Where:

S = Power Density

P = Output Power at Antenna Terminals

G = Gain of Transmit Antenna (linear gain)

R = Distance from Transmitting Antenna

## 5. Radio Frequency Radiation Exposure Evaluation

### 5.1. Standalone Power Density Calculation

| Band   | Frequency<br>(MHz) | Antenna<br>Gain<br>(dBi) | Maximum<br>Power<br>(dBm) | Maximum<br>EIRP<br>(dBm) | Average<br>EIRP (mW) | Power Density<br>at 20cm<br>(mW/cm^2) | Limit<br>(mW/cm^2) |
|--------|--------------------|--------------------------|---------------------------|--------------------------|----------------------|---------------------------------------|--------------------|
| Zigbee | 2405.0             | 1.0                      | 11.00                     | 12.000                   | 15.849               | 0.003                                 | 1.000              |

### Note:

1. For conservativeness, the lowest frequency of each band is used to determine the MPE limit of that band.

2. Chose the maximum power to do MPE analysis.

### **Conclusion:**

According to 47 CFR §2.1091, the RF exposure analysis concludes that the RF Exposure is FCC compliant.

### -----THE END-----
