# **RF Exposure Evaluation Report**

Report No.: FA320111

Cert #5145.02

APPLICANT : Zhejiang Rexense loT Technology Co., Ltd.

**EQUIPMENT**: 2.4G Thread Module

**BRAND NAME : REXENSE** 

MODEL NAME: REX6BS245

FCC ID : 2AOE2REX6BS245

STANDARD : 47 CFR Part 2.1091

The product evaluation date was started from Mar. 17, 2023 and completed on Mar. 17, 2023. We, Sporton International Inc. (Kunshan), would like to declare that the device has been evaluated in accordance with 47 CFR Part 2.1091 and FCC KDB 447498 D01 v06, and pass the limit. Without written approval of Sporton International Inc. (Kunshan), the test report shall not be reproduced except in full.

Approved by: Si Zhang

### 2. Description of Equipment Under Test (EUT)

| Product Feature & Specification            |                             |  |  |  |  |  |
|--|-----------------------------|--|--|--|--|--|
| EUT Type                                   | UT Type 2.4G Thread Module  |  |  |  |  |  |
| Brand Name                                 | REXENSE                     |  |  |  |  |  |
| Model Name                                 | REX6BS245                   |  |  |  |  |  |
| FCC ID                                     | 2AOE2REX6BS245              |  |  |  |  |  |
| Wireless Technology and<br>Frequency Range | Zigbee: 2405 MHz ~ 2480 MHz |  |  |  |  |  |
| Mode                                       | Zigbee: O-QPSK              |  |  |  |  |  |
| Antenna Gain                               | Zigbee: 1.0 dBi             |  |  |  |  |  |
| Antenna Type                               | PCB Antenna                 |  |  |  |  |  |
| HW Version                                 | V1                          |  |  |  |  |  |
| SW Version                                 | V1                          |  |  |  |  |  |
| EUT Stage                                  | Identical Prototype         |  |  |  |  |  |

**Report No. : FA320111** 

**Remark:** The above EUT's information was declared by manufacturer. Please refer to the specifications or user's manual for more detailed description.

#### **Comments and Explanations:**

- 1. The declared of product specification for EUT presented in the report are provided by the manufacturer, and the manufacturer takes all the responsibilities for the accuracy of product specification.
- 2. The maximum RF output tune up power, antenna gain also the safe distance used for evaluate RF exposure were declared by manufacturer.

### 3. Maximum RF average output tune up power among production units

#### <Zigbee>

| Mode |        | Maximum Average power(dBm) |  |  |
|------|--------|----------------------------|--|--|
| 2.4G | Zigbee | 21.00                      |  |  |

### 4. RF Exposure Limit Introduction

According to ANSI/IEEE C95.1-1992, the criteria listed in Table 1 shall be used to evaluate the environmental impact of human exposure to radio frequency (RF) radiation as specified in §1.1310.

| Frequency range<br>(MHz) | Electric field strength (V/m) | Magnetic field strength (A/m) | Power density<br>(mW/cm <sup>2</sup> ) | Averaging time<br>(minutes) |  |
|--------------------------|-------------------------------|-------------------------------|--|-----------------------------|--|
| 800 St.                  | (A) Limits for O              | ccupational/Controlled Expos  | sures                                  | W                           |  |
| 0.3-3.0                  | 614                           | 1.63                          | *(100)                                 | 6                           |  |
| 3.0-30                   | 1842/                         | f 4.89/1                      | f *(900/f2)                            | 6                           |  |
| 30-300                   | 61.4                          | 0.163                         | 1.0                                    | 6                           |  |
| 300-1500                 |                               |                               | f/300                                  | 6                           |  |
| 1500-100,000             |                               |                               | 5                                      | 6                           |  |
|                          | (B) Limits for Gene           | ral Population/Uncontrolled I | Exposure                               |                             |  |
| 0.3-1.34                 | 614                           | 1.63                          | *(100)                                 | 30                          |  |
| 1.34-30                  | 824/                          | f 2.19/1                      | f *(180/f2)                            | 30                          |  |
| 30-300                   | 27.5                          | 0.073                         | 0.2                                    | 30                          |  |
| 300-1500                 |                               |                               | f/1500                                 | 30                          |  |
| 1500-100,000             |                               |                               | 1.0                                    | 30                          |  |

The MPE was calculated at 20 cm to show compliance with the power density limit.

The following formula was used to calculate the Power Density:

$$S=\frac{PG}{4\pi R^2}$$

Where:

S = Power Density

P = Output Power at Antenna Terminals

G = Gain of Transmit Antenna (linear gain)

R = Distance from Transmitting Antenna

Report Issued Date : Jul. 17, 2023

**Report No. : FA320111** 

Report Version : Rev. 01

### 5. Radio Frequency Radiation Exposure Evaluation

#### 5.1. Standalone Power Density Calculation

| Band   | Frequency<br>(MHz) | Antenna<br>Gain<br>(dBi) | Maximum<br>Power<br>(dBm) | Maximum<br>EIRP<br>(dBm) | Average<br>EIRP (mW) | Power Density<br>at 20cm<br>(mW/cm^2) | Limit<br>(mW/cm^2) |
|--------|--------------------|--------------------------|---------------------------|--------------------------|----------------------|---------------------------------------|--------------------|
| Zigbee | 2405.0             | 1.0                      | 21.00                     | 22.000                   | 158.489              | 0.032                                 | 1.000              |

**Report No. : FA320111** 

#### Note:

- 1. For conservativeness, the lowest frequency of each band is used to determine the MPE limit of that band.
- 2. Chose the maximum power to do MPE analysis.

#### **Conclusion:**

According to 47 CFR §2.1091, the RF exposure analysis concludes that the RF Exposure is FCC compliant.
