Re: RF exposure information for:

Product name: Smart Eye with FCC ID 2A0FP-300201

To Whom It May Concern:

The requirements for determination of compliance and the preparation of an Environmental Assessment regarding human exposure to levels of radiofrequency radiation, regulated in 47 CFR Part 2.1091 and 47 CFR 1.1310 for mobile devices RF Exposure Calculations:

The following information provides the minimum separation distance for the highest gain antenna provided with the Smart Eye as calculated from (B) Limits for General Population / Uncontrolled Exposure of: TABLE 1- LIMITS FOR MAXIMUM PERMISSIBLE EXPOSURE (MPE) of §1.1310 Radiofrequency radiation exposure limits.

This calculation is based on the highest EIRP possible from the system, considering maximum power and antenna gain, and considering the Power density:  $S_{\text{limit}} = 1.0\text{mW/cm}^2$  in an uncontrolled exposure environment. The Friis formula used for power density:  $S = (P_{\text{e.i.r.p.}}) / (4 * \pi * r^2)$  where

Maximum average conducted output power:  $P = 10.3\text{mW e.i.r.p.}$

Distance to user:  $r = 20\text{ cm}$

Frequency range: 920 MHz (far-field)

For: Smart Eye with FCC ID 2A0FP-300201:  $S = 0.0021\text{ mW/cm}^2$

Therefore, Smart Eye is considered compliant with the rules for RF exposure without further test or analysis.

Sincerely,

Signature of contact person registered with FCC
