

The pictures below show the test setup for antenna diagram measurements:

The orientation is defined from the main orientation of the antenna; “Horizontal”, “Vertical”, and “Flat”.

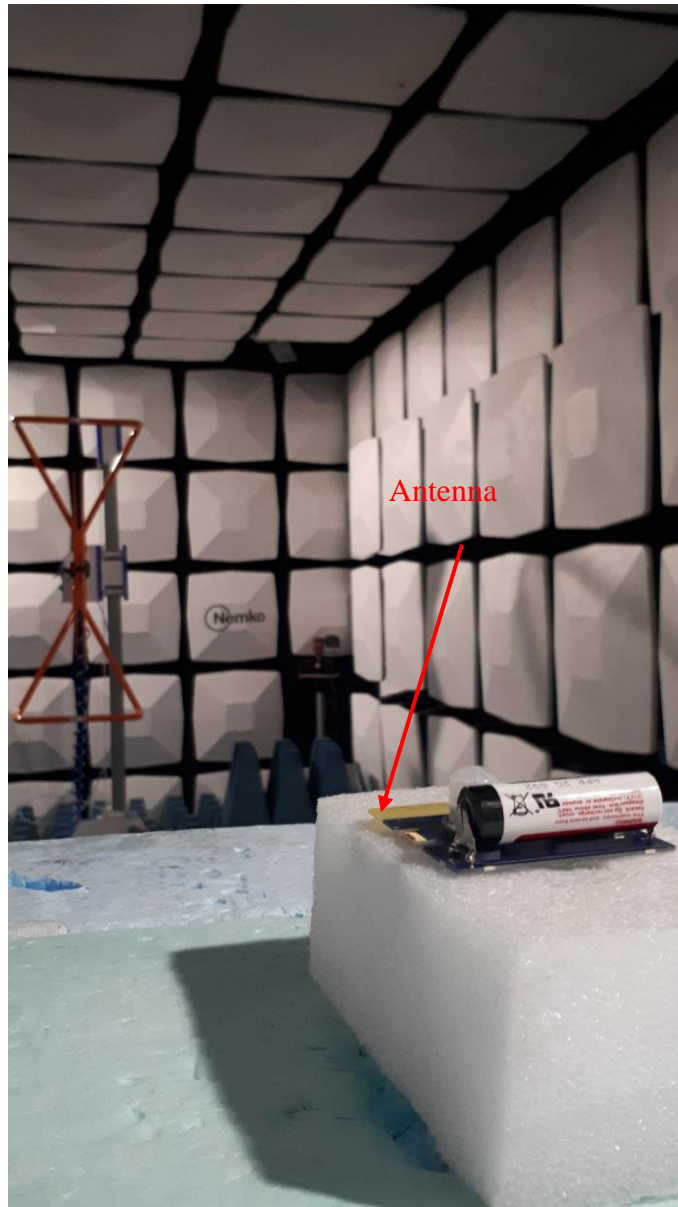

0 degrees in the antenna diagram is the direction towards the measurement antenna and increasing angle is anti-clockwise seen from device – the turntable and device rotates clockwise with increasing angle.

“Horizontal” orientation – main orientation of antenna is horizontal.

“Vertical” orientation – main orientation of antenna is vertical.

"Flat" orientation – main orientation of antenna is flat.
