Signatures in this approval box have checked this document in line with the requirements of TÜV SÜD document control rules.

ENGINEERING STATEMENT

The measurements shown in this report were made in accordance with the procedures described on test pages. All reported testing was carried out on a sample equipment to demonstrate limited compliance with FCC 47 CFR Part 90 and FCC 47 CFR Part 2. The sample tested was found to comply with the requirements defined in the applied rules.

EXECUTIVE SUMMARY

A sample of this product was tested and found to be compliant with FCC 47 CFR Part 90: 2018 and FCC 47 CFR Part 2 2018 for the tests detailed in section 1.3.

1.2 Introduction

Applicant	Axnes Aviation AS
Manufacturer	Axnes Aviation AS
Model Number(s)	MP30
Serial Number(s)	010 300
Hardware Version(s)	R10
Software Version(s)	AXS-SW-0511
Number of Samples Tested	1
Test Specification/Issue/Date	FCC 47 CFR Part 90: 2018 FCC 47 CFR Part 2: 2018
Order Number	802298
Date	22-May-2019
Date of Receipt of EUT	23-May-2019
Start of Test	28-May-2019
Finish of Test	25-September-2019
Name of Engineer(s)	Nandhini Mathivanan, Graeme Lawler and Matthew Russell
Related Document(s)	ANSI C63.26: 2015

1.3 Brief Summary of Results

A brief summary of the tests carried out in accordance with FCC 47 CFR Part 90 and FCC 47 CFR Part 2 is shown below.

Section	Specification Clause	Test Description	Result	Comments/Base Standard
Configuration and Mode: Battery Powered - 8PSK UHF				
2.1	90.205 and 2.1046	Maximum Conducted Output Power	Pass	
2.2	90.207 and 2.1047	Types of Emissions	Declaration	
2.3	90.209 and 2.1049	Bandwidth Limitations	Pass	
2.4	90.210 and 2.1051	Spurious Emissions at Antenna Terminals	Pass	
2.5	90.210 and 2.1055	Frequency Stability	Pass	
2.6	90.221	Adjacent Channel Power	Pass	
2.7	90.214 and N/A	Transient Frequency Behaviour	Pass	
Configuration and Mode: Battery Powered - 16QAM				
2.8	90.210 and 2.1051	Radiated Spurious Emissions	Pass	

Table 2

NOTE: Conducted tests are only documented in this report for 8PSK modulation. The manufacturer declared that the MP30 is electrically identical to the MP50 which was tested in Document 75940027 Report 03 where results for 16QAM modulation are reported.

The manufacturer declared that for Radiated Spurious Emissions, the worst case mode was 16QAM based on Conducted Output Power.

1.4 Application Form

Equipment Description

Technical Description: (Please provide a brief description of the intended use of the equipment)	Crew unit for use in the PNG wireless intercom extension family. Connects to crews helmet or headset. Relays voice and data between crew member and vehicle intercom. Operates in the UHF band.
Manufacturer:	Axnes AS
Model:	MP30
Part Number:	AXS-HH-D0200-BGN-C3

1.5.3 EUT Configuration and Rationale for Radiated Spurious Emissions

The EUT was placed on the non-conducting platform in a manner typical of a normal installation. Pre-scans were performed with the EUT orientated in X, Y and Z planes with reference to the ground plane.

Ports on the EUT were terminated with loads as described in ANSI C63.4 clause 6.2.4.

1.6 Deviations from the Standard

The device under test is capable of operation between 405 MHz and 470 MHz, and as such it straddles several frequency ranges which are covered under Part 90.

The channels used for testing were 406.1125 MHz, 450.0125 MHz and 469.9875 MHz, and were selected to cover the full range of the device. All channels within the frequency range 405 MHz to 470 MHz have equivalent power, bandwidth and modulation (either 8PSK or 16QAM).

1.7 EUT Modification Record

The table below details modifications made to the EUT during the test programme.

The modifications incorporated during each test are recorded on the appropriate test pages.

Modification State	Description of Modification still fitted to EUT	Modification Fitted By	Date Modification Fitted

MP30

2.2.3 Date of Test

31-May-2019

2.2.4 Test Method

The following information was provided by the manufacturer

2.2.5 Test Results

Battery Powered - 8PSK UHF

The emission designator was declared by the manufacturer as 20K0D7W.

Modulation Type: [D] Carrier is amplitude and angle modulated.

Modulation Nature: [7] Two or more digital channels

Information Type: [W] Multiple Formats of Data Transmitted.

FCC 47 CFR Part 90, Limit Clause 90.207

As per FCC Part 90.207 (b) through (n).

FCC 47 CFR Part 2, Limit Clause 2.1047

Voice modulated communication equipment. A curve or equivalent data showing the frequency response of the audio modulating circuit over a range of 100 to 5000 Hz shall be submitted. For equipment required to have an audio low-pass filter, a curve showing the frequency response of the filter, or of all circuitry installed between the modulation limiter and the modulated stage shall be submitted.

Equipment which employs modulation limiting. A curve or family of curves showing the percentage of modulation versus the modulation input voltage shall be supplied. The information submitted shall be sufficient to show modulation limiting capability throughout the range of modulating frequencies and input modulating signal levels employed.

2.3 Bandwidth Limitations

2.4 Spurious Emissions at Antenna Terminals

2.4.1 Specification Reference

FCC 47 CFR Part 90, Clause 90.210
FCC 47 CFR Part 2, Clause 2.1051

2.4.2 Equipment Under Test and Modification State

MP30, S/N: 010 300 - Modification State 0

2.4.3 Date of Test

30-May-2019

2.4.4 Test Method

The test was performed according to FCC 47 CFR Part 90, Clause 90.210, FCC 47 CFR Part 2, Clause 2.1051 and ANSI C63.26, clause 5.7.

The centre frequency of the spectrum analyser was adjusted as required so that the 22 kHz authorized bandwidth was centered on the measured centre frequency, as opposed to the nominal centre frequency. Frequency error requirements are considered as documented in section 2.5 of the present document.

For frequencies between 9 kHz to 150 kHz and 150 kHz to 30 MHz the RBW chosen for measurement was reduced to 1 kHz and 10 kHz respectively. This is less than the 100 kHz RBW requirement for frequencies below 1000 MHz as stated in 90.210(o). These lower RBW's were chosen though to ensure that any DC leakage from the input was not measured. If $10 \cdot \log(100/\text{RBW})$ is added to the highest peak result to correct for the lower RBW used in the measurement and the corrected result compared to the limit, it can be seen that the measurements demonstrate compliance with the appropriate limit.

2.5.2 Equipment Under Test and Modification State

MP30, S/N: 010 300 - Modification State 0

2.5.3 Date of Test

24-September-2019 to 25-September-2019

2.5.4 Test Method

This test was performed in accordance with FCC 47 CFR Part 2, Clause 2.1055.

The temperature was varied from -30 °C to +50 °C in 10° steps at nominal voltage. Frequency measurements were performed at +20 °C for minimum and maximum voltages.

The peak value was determined using the marker peak function and the frequency of the points -20 dBc relative to the peak were recorded as f1 and f2. To find out the frequency error, the following formula was used. $f_c = (f1 + f2) / 2$. The frequency error is the difference between the declared transmitted frequency and calculated carrier frequency declared frequency.

2.5.5 Environmental Conditions

Ambient Temperature 22.4 °C
Relative Humidity 64.9 %

2.6 Adjacent Channel Power

2.6.1 Specification Reference

FCC 47 CFR Part 90, Clause 90.221

2.6.2 Equipment Under Test and Modification State

MP30, S/N: 010 300 - Modification State 0

2.6.3 Date of Test

20-November-2019

2.6.4 Test Method

The antenna port of the EUT was connected to a spectrum analyser via an attenuator and bi-directional coupler. The incident port of the coupler was connected to the BST 50 Base Station which was configured to the same channel as the EUT.

The spectrum analyser adjacent channel power measurement function was configured to measure over and 18 kHz bandwidth at 25 kHz, 50 kHz and 75 kHz offsets. The gated trigger of the spectrum analyser was used as the duty cycle of the EUT was less than 98%

The results have been recorded below in dBm as it is not necessary to for the ACP to be below -36 dBm which is less stringent than the -70 dBc requirement.

2.6.5 Environmental Conditions

Ambient Temperature 23.3 °C
Relative Humidity 24.6 %

2.6.6 Test Results

Battery Powered - 8PSK UHF

Offset (kHz)	Adjacent Channel Power		
	406.1125 MHz	450.0125 MHz	469.9875 MHz
-25	-61.10 dBc	-59.95 dBc	-62.03 dBm
+25	-59.18 dBc	-59.17 dBc	-61.16 dBm
-50	-37.51 dBm	-36.37 dBm	-37.50 dBm
+50	-36.98 dBm	-36.22 dBm	-37.24 dBm
-75	-39.23 dBm	-39.07 dBm	-38.74 dBm
+75	-39.26 dBm	-39.16 dBm	-38.52 dBm

Table 14 - Adjacent Channel Power

FCC Part 90, Limit Clause 90.221(b)

Frequency Offset	Maximum ACP (dBc) for devices $\leq 1W$	Maximum ACP (dBc) for devices $> 1W$
25 kHz	-55	-60
50 kHz	-70	-70
75 kHz	-70	-70

Table 15 - Adjacent Channel Power Limits

NOTE: In any case, no requirement in excess of -36 dBm shall apply.

Industry Canada RSS-119, Limit Clause 5.8.9.1

The ACP of transmitters operating in the bands 768-776 MHz and 798-806 MHz shall comply with the requirements for various transmitter channel sizes provided in tables 13 to 16 of the specification.

2.6.7 Test Location and Test Equipment Used

This test was carried out in RF Laboratory 3.

2.8 Radiated Spurious Emissions

2.8.1 Specification Reference

FCC 47 CFR Part 90, Clause 90.210
FCC 47 CFR Part 2, Clause 2.1051

2.8.2 Equipment Under Test and Modification State

MP30, S/N: 010 300 - Modification State 0

2.8.3 Date of Test

17-July-2019

2.8.4 Test Method

Testing was performed in accordance with ANSI C63.26, Clause 5.5.

The regulatory EIRP limit of -13dBm has been converted to a Field Strength using equation c) in clause 5.2.7 of ANSI C63.26.

$$E \text{ (dBuV/m)} = \text{EIRP (dBm)} - 20 \log(D) + 104.8.$$

At a measurement distance of 3 meters:

$$E \text{ (dBuV/m)} = -13 - 20\log(3) + 104.8.$$

$$E = 82.26 \text{ dBuV/m}$$

2.8.5 Environmental Conditions

Ambient Temperature 17.0 °C
Relative Humidity 60.8 %

4 Measurement Uncertainty

For a 95% confidence level, the measurement uncertainties for defined systems are:

Test Name	Measurement Uncertainty
Radiated Spurious Emissions	30 MHz to 1 GHz: ± 5.2 dB 1 GHz to 18 GHz: ± 6.3 dB
Transient Frequency Behaviour	± 0.2 Hz
Adjacent Channel Power	± 3.0 dB
Frequency Stability	± 463.022 Hz
Spurious Emissions at Antenna Terminals	± 3.45 dB
Bandwidth Limitations	± 58.05 Hz
Types of Emissions	-
Maximum Conducted Output Power	± 3.2 dB

Table 23

Measurement Uncertainty Decision Rule

Determination of conformity with the specification limits is based on the decision rule according to IEC Guide 115:2007, clause 4.4.3 and 4.5.1.
