## **Cover Letter-Wireless Charger Approval**

Date: 11/13/2023

## **Gentlemen:**

There's a Wireless Charger that would like to have your authorization as an Inductive wireless power transfer applications approval.

The specific product as below, Wireless Charger, with its designed features and specified description, meets special requirements for KDB 680106 D01 section 5.2 requirements.

Company:	Anker Innovations Limited
Product Name:	Anker MagGo Wireless Charging Station
Model Number:	A25M3
FCC ID:	2AOKB-A25M3

KDB 680106 D01 Section 5.2 Requirements	Product Technical Specification	Reply
(1) The power transfer frequency is below 1 MHz.  (2) The output power from each transmitting	Output 1 (for iPhone): 119.20-141.20kHz & 356.60-369.60kHz Output 2 (for iWatch): 325.32-327.60kHz & 1.776-1.779MHz Output 3 (for TWS): 111.40-180.00kHz For iPhone: 5W/7.5W/15W	A KDB inquiry is submitted and approved by FCC. Tracking No. 687870
element (e.g., coil) is less than or equal to 15 watts.	For iWatch: 5W For TWS: 5W	res
(3) A client device providing the maximum permitted load is placed in physical contact with the transmitter (i.e., the surfaces of the transmitter and client device enclosures need to be in physical contact).		Yes
(4) Only § 2.1091-Mobile exposure conditions apply.	For inductive applications where the primary does not physically attach to the client, and it is intended for desktop use, the desktop guidance in KDB 680106 D01 may be applied	Yes
(5) The E-field and H-field strengths, at and beyond 20 cm surrounding the device surface, are demonstrated to be less than 50% of the applicable MPE limit, per KDB 447498, Table 1. These measurements shall be taken along the principal axes of the device, with one axis oriented along the direction of the estimated maximum field strength, and for three points per axis or until a 1/d (inverse distance from the emitter structure) field strength decay is observed. Symmetry considerations may be used for test reduction purposes. The device shall be operated in documented worst-case compliance scenarios (i.e., the ones that lead to the	Please refer to RF exposure report	Yes

## **Anker Innovations Limited**

maximum field components), and while all the		
radiating structures (e.g., coils or antennas) that by		
design can simultaneously transmit are energized at		
their nominal maximum power.		
(6) For systems with more than one radiating	Please refer to RF exposure report	Yes
structure, the conditions specified in (5) must be		
met when the system is fully loaded (i.e., clients		
absorbing maximum power available), and with all		
the radiating structures operating at maximum		
power at the same time, as per design conditions. If		
the design allows one or more radiating structures		
to be powered at a higher level while other		
radiating structures are not powered, then those		
cases must be tested as well. For instance, a device		
may use three RF coils powered at 5 W, or one coil		
powered at 15 W: in this case, both scenarios shall		
be tested.		

Title: General Manager

Sincerely,
