## **Limits for Maximum Permissible Exposure (MPE)**

The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in 1.1307(b)

Limits for Maximum Permissible Exposure (MPE)

| Frequency range<br>(MHz)                                | Electric field<br>strength<br>(V/m) | Magnetic field strength (A/m) | Power density<br>(mW/cm²) | Averaging time (minutes) |  |  |  |  |  |
|---|-------------------------------------|-------------------------------|---------------------------|--------------------------|--|--|--|--|--|
| (A) Limits for Occupational/Controlled Exposures        |                                     |                               |                           |                          |  |  |  |  |  |
| 0.3-3.0   | 614                                 | 1.63                          | *(100)                    | 6                        |  |  |  |  |  |
| 3.0–30  | 1842/f                              | 4.89/f                        | *(900/f <sup>2</sup> )    | 6                        |  |  |  |  |  |
| 30–300  | 61.4                                | 0.163                         | 1.0                       | 6                        |  |  |  |  |  |
| 300–1500  |                                     |                               | f/300                     | 6                        |  |  |  |  |  |
| 1500–100,000  |                                     |                               | 5                         | 6                        |  |  |  |  |  |
| (B) Limits for General Population/Uncontrolled Exposure |                                     |                               |                           |                          |  |  |  |  |  |
| 0.3–1.34  | 614                                 | 1.63                          | *(100)                    | 30                       |  |  |  |  |  |
| 1.34–30   | 824/f                               | 2.19/f                        | *(180/f <sup>2</sup> )    | 30                       |  |  |  |  |  |
| 30–300  | 27.5                                | 0.073                         | 0.2                       | 30                       |  |  |  |  |  |
| 300–1500  |                                     |                               | f/1500                    | 30                       |  |  |  |  |  |
| 1500–100,000  |                                     |                               | 1.0                       | 30                       |  |  |  |  |  |

## Friis transmission formula: $Pd=(P_{out}*G)\setminus(4*pi*R^2)$

Where

Pd= Power density in mW/cm<sup>2</sup>

Pout=output power to antenna in mW

G= gain of antenna in linear scale

Pi=3.1416

R= distance between observation point and center of the radiator in cm

Pd the limit of MPE, 1mW/cm2. If we know the maximum gain of the antenna and total power input to the antenna, through the calculation, we will know the distance where the MPE limit is Reached.

#### Test Procedure

Software provided by client enabled the EUT to transmit and receive data at lowest, middle and highest channel individually.

# **RF Exposure Evaluation**

Report No. LP24040149C01-17 LP24040149C01-05
