

# RF EXPOSURE EVALUATION REPORT

APPLICANT	: Anker Innovations Limited
PRODUCT NAME	: eufy Smart Lock C30
MODEL NAME	: T85D0
BRAND NAME	: eufy
FCC ID	: 2AOKB-T85D0
STANDARD(S)	: 47 CFR Part 2(2.1091)
RECEIPT DATE	: 2024-06-19
TEST DATE	: 2024-06-25 to 2024-07-02
ISSUE DATE	: 2024-07-03

Edited by:

# **1. Technical Information**

Note: Provide by applicant.

### **1.1 Applicant and Manufacturer Information**

Applicant:	Anker Innovations Limited	
Applicant Address:	Unit 56, 8th Floor, Tower 2, Admiralty Centre, 18 Harcourt Road,	
Manufacturer:	Hong Kong   ufacturer: Anker Innovations Limited	
Manufacturer Address:	Unit 56, 8th Floor, Tower 2, Admiralty Centre, 18 Harcourt Road, Hong Kong	

### **1.2 Equipment under Test (EUT) Description**

Product Name:	eufy Smart Lock C30			
Sample No.:	5#			
Hardware Version:	V3			
Software Version:	V2.0.2.6			
Fraguanay Panday	Bluetooth	2402MHz-2480MHz		
Frequency Bands:	WLAN 2.4GHz	WLAN 2.4GHz 2412MHz-2462MHz		
Madulation Made	Bluetooth	GFSK(1Mbps, 2Mbps)		
Modulation Mode:	WLAN 2.4GHz DSSS, OFDM			
	Bluetooth			
	Antenna Type:	PCB Antenna		
Antenna	Antenna Gain: 1.72dBi			
Information:	WLAN 2.4GHz			
	Antenna Type:	PIFA Antenna		
	Antenna Gain:	3.41dBi

### **1.3 Applied Reference Documents**

### Leading reference documents for testing:

		Method		
Identity	Document Title	Determination		
		/Remark		
47 CEB Dart 2/2 1001)	Radio Frequency Radiation Exposure	No deviation		
47 CFR Part 2(2.1091)	Assessment: mobile devices	NO DEVIALION		
KDB 447498 D01v06	B 447498 D01v06 General RF Exposure Guidance N			
Note 1: Additions to, deviation, or exclusions from the method shall be judged in the "method				
determination" column of add, deviate or exclude from the specific method shall be explained in				
the "Remark" of the above table.				
Note 2: When the test result is a critical value, we will use the measurement uncertainty give				
the judgment result based on the 95% confidence intervals.

## 2. Device Category and RF Exposure Limit

Per user manual, based on 47 CFR 2.1091, this device belongs to mobile device category with General Population/Uncontrolled exposure.

### Mobile Devices:

### 47 CFR 2.1091(b)

For purposes of this section, a mobile device is defined as a transmitting device designed to be used in other than fixed locations and to generally be used in such a way that a separation distance of at least 20 centimeters is normally maintained between the transmitter's radiating structure(s) and the body of the user or nearby persons. In this context, the term "fixed location" means that the device is physically secured at one location and is not able to be easily moved to another location. Transmitting devices designed to be used by consumers or workers that can be easily re-located, such as wireless devices associated with a personal computer, are considered to be mobile devices if they meet the 20 centimeter separation requirement.

### General Population/Uncontrolled Exposure:

The general population/uncontrolled exposure limits are applicable to situations in which the general public may be exposed or in which persons who are exposed as a consequence of their employment may not be made fully aware of the potential for exposure or cannot exercise control over their exposure. Members of the general public would come under this category when exposure is not employment-related; for example, in the case of a wireless transmitter that exposes persons in its vicinity. Warning labels placed on low-power consumer devices such as cellular telephones are not considered sufficient to allow the device to be considered under the occupational/controlled category, and the general population/uncontrolled exposure limits apply to these devices.

Frequency range (MHz)	Electric field strength (V/m)	Magnetic field strength (A/m)	Power density (mW/cm²)	Averaging time (minutes)
(1	B) Limits for Genera	al Population/Unco	ntrolled Exposure	
0.3-1.34	614	1.63	*(100)	30
1.34-30	824/f	2.19/f	*(180/f²)	30
30-300	27.5	0.073	0.2	30
300-1500	-	-	f/1500	30
1500-100,000	-	-	1.0	30

#### Table 1Limits for Maximum Permissible Exposure (MPE)

f = frequency in MHz\* = Plane-wave equivalent power density

### 3. Maximum Average Power Summary

Wireless Mode	Channel	Frequency (MHz)	Max. Average Power (dBm)	Tune-up Limit (dBm)
Bluetooth	CH 39	2480	2.84	4.00
WLAN 2.4GHz	CH 6	2437	21.09	22.00

**Note 1:** According to KDB 447498, MPE assessment is based on source-based time-averaged maximum conducted output power of the RF channel requiring assessment, adjusted for tune-up tolerance, and the minimum test separation distance required for the exposure conditions. **Note 2:** The maximum average power refers to report (Report No.: SZ24060185W01/W02).

ShenzhenMorlab Communications Technology Co., Ltd. FL.1-3, Building A, FeiYang Science Park, No.8 LongChang Road, Block67, BaoAn District, ShenZhen , GuangDong Province, P. R. China Tel: 86-755-36698555

Fax: 86-755-36698525

Http://www.morlab.cn

# 4. RF Exposure Assessment

#### Standalone Transmission Assessment

#### <Standalone Antenna Transmission Assessment>

Bands	Frequency (MHz)	Tune-up Power(dBm)	Antenna Gain(dBi)	E.I.R.P. (mW)	Power Density (mW/cm²)	Limit for MPE (mW/cm <sup>2</sup> )
Bluetooth	2480	4.00	1.72	3.73	0.001	1.0
WLAN 2.4GHz	2437	22.00	3.41	347.54	0.069	1.0

#### Note:

- 1. According to KDB 447498, MPE assessment is based on source-based time-averaged maximum conducted output power of the RF channel requiring assessment, adjusted for tune-up tolerance, and the minimum test separation distance required for the exposure conditions.
- 2. MPE calculate method

### $S = PG/4\pi R^2$

- Where: S= Power density (in appropriate units, e.g. mW/cm<sup>2</sup>)
  - P = Time-average maximum tune-up power (in appropriate units, e.g. dBm)
  - G = numeric gain of the antenna (in appropriate units, e.g. dBi)
  - R = Separation distance to the centre of radiation of the antenna (20cm)

### Simultaneous Transmission Assessment:

According to the user manual, both the WLAN and Bluetooth transmitters in the device cannot operate simultaneously, therefore simultaneous transmission analysis is not required.

### > Conclusion:

According to 47 CFR §2.1091, this device complies with human exposure basic restrictions.

ShenzhenMorlab Communications Technology Co., Ltd. FL.1-3, Building A, FeiYang Science Park, No.8 LongChang Road, Block67, BaoAn District, ShenZhen , GuangDong Province, P. R. China Tel: 86-755-36698555 Fax: 86-755-36698525 Http://www.morlab.cn E-mail: service@morlab.cn

# **Annex A Testing Laboratory Information**

### 1. Identification of the Responsible Testing Laboratory

Laboratory Name:     Shenzhen Morlab Communications Technology Co., I			
	FL.1-3, Building A, FeiYang Science Park, No.8		
Laboratory Address:	LongChang Road, Block 67, BaoAn District, ShenZhen,		
	GuangDong Province, P. R. China		
Telephone:	+86 755 36698555		
Facsimile:     +86 755 36698525			

### 2. Identification of the Responsible Testing Location

Name:     Shenzhen Morlab Communications Technology Co.,		
	FL.1-3, Building A, FeiYang Science Park, No.8	
Address:	LongChang Road, Block 67, BaoAn District, ShenZhen,	
	GuangDong Province, P. R. China	

### 3. Facilities and Accreditations

All measurement facilities used to collect the measurement data are located at FL.3, Building A, FeiYang Science Park, Block 67, BaoAn District, Shenzhen, 518101 P. R. China. The test site is constructed in conformance with the requirements of ANSI C63.10-2013and CISPR Publication 22; the FCC designation number is CN1192, the test firm registration number is 226174.

END OF REPORT
