Fax: (03) 3280034

According to KDB 447498 section 4.3.1, the I-g SAR test exclusion thresholds at test separation distance ≤ 50 mm are determined by:

$[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation distance, mm})] \cdot [\sqrt{f(\text{GHz})}] \leq 3.0$

The max. average power of channel, including tune-up tolerance(mW) is **5.495 mW**
@ **2480 MHz** (With Tune-up tolerance),

The min. test separation distance (mm) is **5 mm**,

So, $[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation distance, mm})] \cdot [\sqrt{f(\text{GHz})}] = 1.731 < 3.0$ (With Tune-up tolerance).

Therefore, standalone SAR measurements are not required for both head and body.
