1 SUMMARY

See Appendix 1 for photos.

Emission measurements as specified below have been performed.

1.1 Test plan

Standard	Name of the test	Results
FCC 47 CFR Part 15C	15.249 Operation within the band 2400-2483.5 MHz	PASSED
15.35 (c)	Duty cycle measurement	-
15.249 (a)	Field strength of fundamental	PASSED
15.249 (d) (e)	Radiated emission	PASSED
15.207	AC conducted emission	PASSED
15.215 (c)	20 dB bandwidth	PASSED
2.1049	Occupied bandwidth	PASSED
2.1049	Band Edge	PASSED

PASSED The test was performed and the test specimen complies with the essential requirements in the standard.

FAILED The test was performed and the test specimen does not comply with the essential requirements in the standard.

REF The test is covered by a test in another report and/or on a similar test specimen.

NR The test is not relevant for the test specimen or has been waived by the manufacturer.

1.2 Test Specimen

Manufacturer	Shape Robotics
Name	Spin
Model No.	SPN001
Hardware ver.	1.6
Test Software	Spin_fcc_const_carrier_modulated.hex
Supply voltage	5 VDC by USB or internal Li-ion battery

The Spin is an item containing two motor controlled wheels, which enables the Spin to rotate.

The movement is controlled by a PC program. The communication is performed via a 2.4 GHz radio link to a Dongle connected to a PC by a USB cable.

The Spin is powered by an internal Li-ion battery and charged via USB connector.

The 2.4 GHz radio used in both Spin and Dongle is the same type module from ITEAD. The radio is based on a chipset from Nordic Semiconductor nRF24L01+.

The 2.4 GHz radio uses 6 pre-allocated frequencies in the range 2408 MHz to 2468 MHz.

The switching between the frequencies is done manually. (Pressing a button).

As the frequency range is greater than 10 MHz 3 frequencies are selected for test.

1. 2408 MHz
2. 2441 MHz
3. 2468 MHz

See photo 1 in appendix 1.

1.3 Auxiliary Equipment

1.3.1 AC/DC adaptor

Manufacturer	Shape Robotics
Model	UBP-008
Details	-
Supply voltage	100 – 240 VAC (120 VAC 60 Hz was used during tests)
Output voltage	5 VDC

See photo in appendix 1.

1.4 I/O ports / cables to test specimen

I/O Port Cable	Type	Shielding	Cable length
USB	Std.	Shielded	40 cm

1.5 Test set-up

During the tests the 2.4 GHz module (nRF24L01+) was set to transmit maximal power at one frequency, with the maximal duty cycle which was possible with normal modulation in test mode.

2 TESTS

2.1 Duty Cycle

Test specimen	Spin
Test specification	47 CFR Part 15 Subpart C
Test method	ANSI C63.10:2013
Comments	None
Temperature / Humidity	22°C / 35%RH
Dates of measurements	2018-12-10
Test personnel	Søren Søltoft

2.1.1 Test setup

It was not possible to configure the 2.4 GHz radio module to 100 % duty cycle.

The duty cycle was calculated from the total on time during a 100 ms period.

The measured duty cycle does not represents is higher than the duty cycle in normal mode.

The measurements were performed in a semi-anechoic chamber with absorber on floor

See photo of test set up in appendix 1.

2.1.2 Test result

The duty cycle was measured at 2441 MHz.

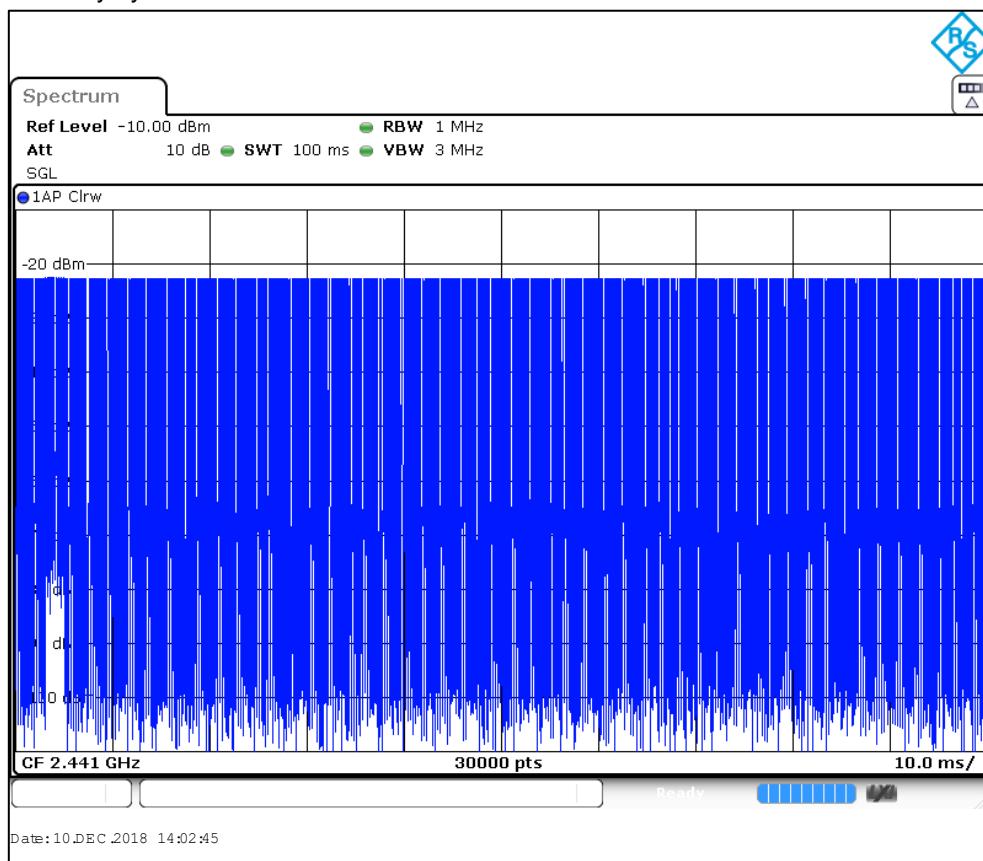

Figure 1. Duty Cycle.

The total pulse time was calculated in a spreadsheet based on the 30000 measurements points from the Analyzer.

Total pulse time [ms]	Period time [ms]	Duty cycle	Duty cycle correction factor [dB]
46.16	100	0.4616	-6.715

Table 1. Duty cycle.

2.1.3 Test equipment

Description	Supplier	Model	Tag no.	Cal. due date
Receiver EMI Test 10Hz-13.6GHz	Rohde & Schwarz	FSV 13	50092	2019-08-24

2.2 Field strength of fundamental

Test specimen	Spin
Test specification	FCC 47 CFR Part 15.249
Test method	ANSI C63.10:2013
Frequency range	2400-2483.5 MHz
Limits	FCC 47 CFR Part 15.249 (a)
Comments	None
Temperature / Humidity	22°C / 39%RH
Dates of measurements	2018-12-03
Test personnel	Søren Søltoft

2.2.1 Test setup

The radiated maximum peak output power measurements were performed in the semi-anechoic chamber with absorber on floor.

The fundamental was scanned with peak detector with the EUT in 3 positions and the turntable was varied between 0-360 degrees for maximum response.

The antenna distance during the measurements was 3.0 m.

The EUT height above the reference ground plane was 1.5 m

See appendix 1 for photo of test set up and test specimen orientation

2.2.2 Test limit

Frequency range	Field strength limit	Field strength limit
2400 – 2483.5 MHz	50 mV/m	94 dB μ V/m

Table 2. Field strength of fundamental limit.

2.2.3 Test results

Fundamental: 2408 MHz			
EUT axis	X	Y	Z
Antenna polarization	Vertical	Horizontal	Vertical
Max. peak power	88.76 dB μ V/m	89.6 dB μ V/m	88.4 dB μ V/m
Result	PASSED	PASSED	PASSED

Fundamental: 2441 MHz			
EUT axis	X	Y	Z
Antenna polarization	Vertical	Horizontal	Vertical
Max. peak power	89.54 dB μ V/m	89.69 dB μ V/m	87.87 dB μ V/m
Result	PASSED	PASSED	PASSED

Fundamental: 2468 MHz			
EUT axis	X	Y	Z
Antenna polarization	Vertical	Horizontal	Vertical
Max. peak power	89.29 dB μ V/m	88.65 dB μ V/m	86.84 dB μ V/m
Result	PASSED	PASSED	PASSED

See appendix 1 for photo of test set up and test specimen orientation

The rated supply voltage were variated between 85% and 115% of range without any changes in output power.

2.2.4 Test equipment

Description	Supplier	Model	Tag no.	Cal. due date
Antenna Horn	Schwarzbeck	BBHA 9120 D	20777	2019-02-18
Analyzer 20Hz-26.5GHz	Rohde & Schwarz	ESI	20763	2018-12-05

2.3 Radiated emission

Test specimen	Spin
Test specification	47 CFR Part 15.249 (d) (e)
Test method	ANSI C63.10:2013
Frequency range	30 MHz – 25 GHz
Limits	47 CFR Part 15.249 (a) and 15.209
Comments	None
Temperature / Humidity	22°C / 39%RH, 21°C / 39%RH, 22°C / 39%RH, 22°C / 37%RH, 21°C / 37%RH, 21°C / 37%RH
Dates of measurements	2018-12-03, 2018-12-04, 2018-12-05, 2018-12-06, 2018-12-07, 2018-12-12
Test personnel	David Busk, Søren Søltoft

2.3.1 Test setup

A measuring distance of 3 m was used during the tests.

The EUT was placed on a non-conductive table.

For measurements below 1 GHz, the height was 0.8 m and above 1 GHz the height was 1.5 m.

The test of radiated emission was performed in a semi anechoic chamber with absorbers on floor above 1 GHz. The measurements were performed with both horizontal and vertical polarizations of the antenna. The antenna distance during the measurements was 3.0 m.

The test specimen was tested in a combination of orientations and 3 frequencies.

The middle channel at 2441 MHz was tested in 3 orientations. The outer channels at 2408 MHz and 2468 MHz were tested in worst orientation found at the middle channel.

A pre-measurement was performed with peak detector. The test object was measured in eight directions with the antenna in the frequency range 30-1000 MHz and in eighteen directions at frequencies above 1 GHz, with the antenna at three heights, 1.0 m, 1.5 m and 2.0 m. In the frequency range of 14 GHz to 25 GHz the measurement distance was 0.5 m.

If the emission is close or above the limit during the pre-measurement, the test object was scanned 360 degrees and the antenna height scanned from 1 to 4 m for maximum response. Then the emission was measured with the quasi-peak detector on frequencies below 1 GHz and with the CISPR-average detector above 1 GHz.

The following RBW were used:

30 MHz-1 GHz: RBW = 120 kHz

1-25 GHz: RBW = 1 MHz

See appendix 1 for photo of test set up

2.3.2 Test results

2.3.2.1 Test result for Middle channel 2441 MHz.

2.4 AC Conducted emission

Test specimen	Spin
Test specification	47 CFR Part 15.207
Test method	ANSI C63.10:2013
Frequency range	0.15 - 30 MHz
Limits	47 CFR Part 15.207
Comments	None
Temperature / Humidity	22°C / 46%RH
Dates of measurements	2018-12-10
Test personnel	Søren Søltoft

2.4.1 Test setup

Measurements were performed with the test specimen powered from a AC/DC adaptor while sending max power with max duty cycle at the middle channel (2441 MHz). The mains supply was 120 VAC 60 Hz.

See appendix 1 for photo of test set up

2.4.2 Test limits

Frequency (MHz)	Quasi-peak value (dB μ V)	Average value (dB μ V/m)
0.15-0.5	66-56*	56-46*
0.5-5	56	46
5-30	60	50

2.7 Band edge

Test specimen	Spin
Test specification	47 CFR 2.1049
Test method	ANSI C63.10:2013
Comments	None
Temperature / Humidity	21°C / 37%RH
Dates of measurements	2018-12-07
Test personnel	Søren Søltoft

2.7.1 Test setup

A measuring distance of 3 m was used during the tests.

The EUT was placed 1.5 m above ground on a non-conductive table.

The turntable, antenna height and antenna polarity were adjusted for maximal radiated emission level.

The graphs are offset with the correction factor to show the maximal level.

See appendix 1 for photo of test set up

According to 15.205 the nearest restricted bands above and below the operational band are 2310 – 2390 MHz and 2483.5 – 2500 MHz. Thus the low channel at 2405 MHz was tested according to ANSI 63.10:2013 clause 6.10.4 Authorized-band band-edge measurements and the high channel at 2479 MHz was tested according to ANSI 63.10:2013 clause 6.10.5 Restricted-band band-edge measurements.

Limits according to 15.209.

2.7.2 Test results

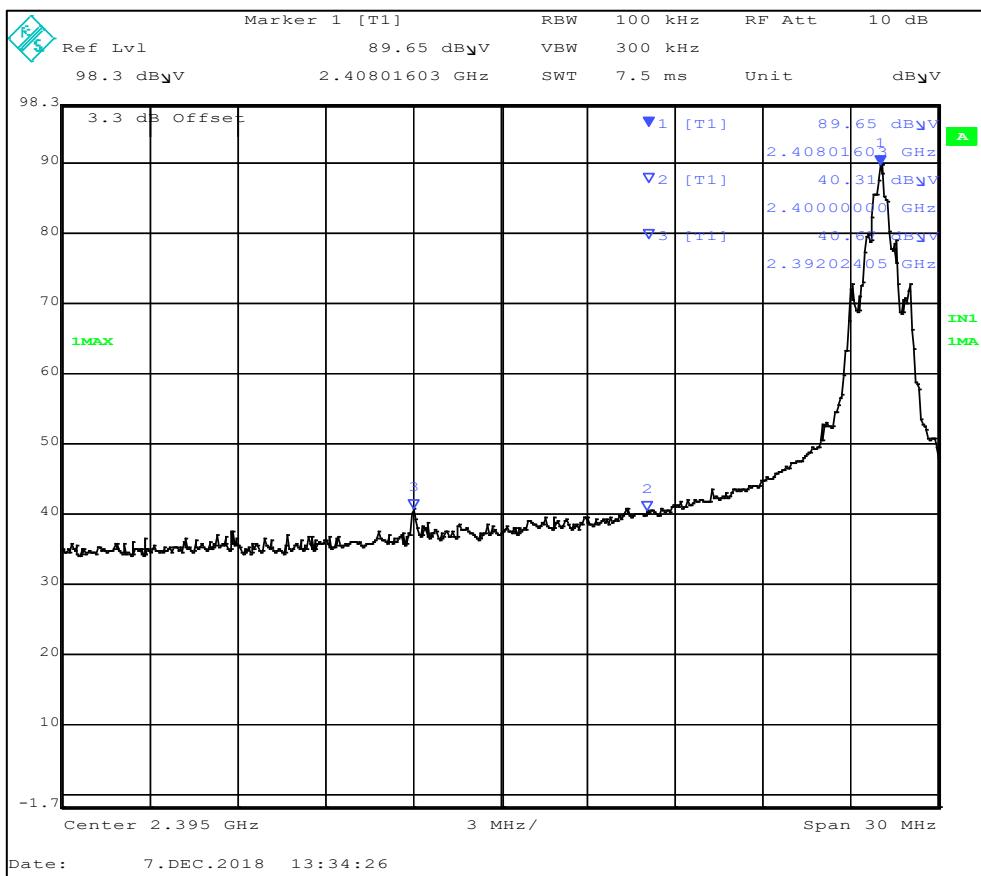

Figure 36. Band Edge Low channel 2405 MHz. Peak detector.

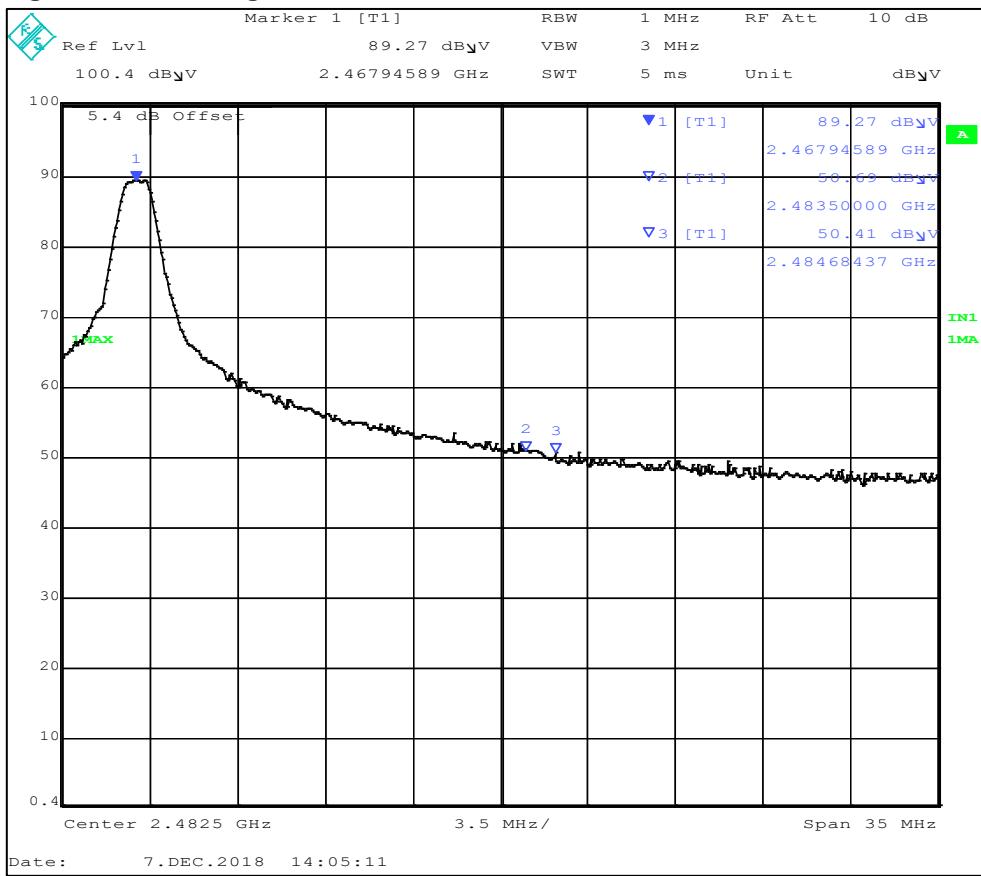

Figure 37. Band Edge High channel 2479 MHz. Peak detector.

The fundamental are pulsed, thus the average value is calculated by correcting the Peak detector level with the Duty Cycle Correction Factor found in section 2.1.

Channel Frequency	Detector	Band-Edge level	Margin	Limit	Result
[MHz]		[dB μ V/m]	[dB]	[dB μ V/m]	
2408	Peak	40.67	33.33	74	PASSED
2408	Average	33.96	20,04	54	PASSED
