Report No.: E202308308600-1

Customer: Polaris Industries Inc.

Address: 1600 SE 18th Ave, Battle Ground, Washington, United States of America

Sample Name: PCB Antenna

Sample Model: XK-PL-ANT1

Receive Sample Date: Sep.08,2023

Test Date: Sep.11,2023 ~ Sep.11,2023

Reference Document: ANSI IEEE 149-2021 Part 7, Part 8, Part 10

Test Result: Pass

4. MEASUREMENT UNCERTAINTY

Uncertainty is calculated according to ISO's "Guide to the Expression of Uncertainty in Measurement" (GUM), and the extended uncertainty is expressed using an inclusion factor of $k=2$ and a 95% confidence level.

Test Item	Test Frequency	Limits
Gain	2400MHz~2500MHz	/ ¹⁾
Efficiency	2400MHz~2500MHz	/ ¹⁾
Antenna pattern	2400MHz~2500MHz	/ ¹⁾

Note 1): Customer-defined tests, unlimited definitions.

6.2 TEST PROCEDURE

a) Adjust the ambient temperature of the test system to within 20°C-30 °C.

b) System gain calibration:

1) Set up the standard antenna so that the apparent phase center of the standard antenna is consistent with the geometric center of the system, rotate the turntable by 90 °, and adjust the phase center of the standard antenna again;

2) Start the test after setting the test frequency;

3) Gain calibration data is calculated and stored on the control computer.

c) Antenna test:

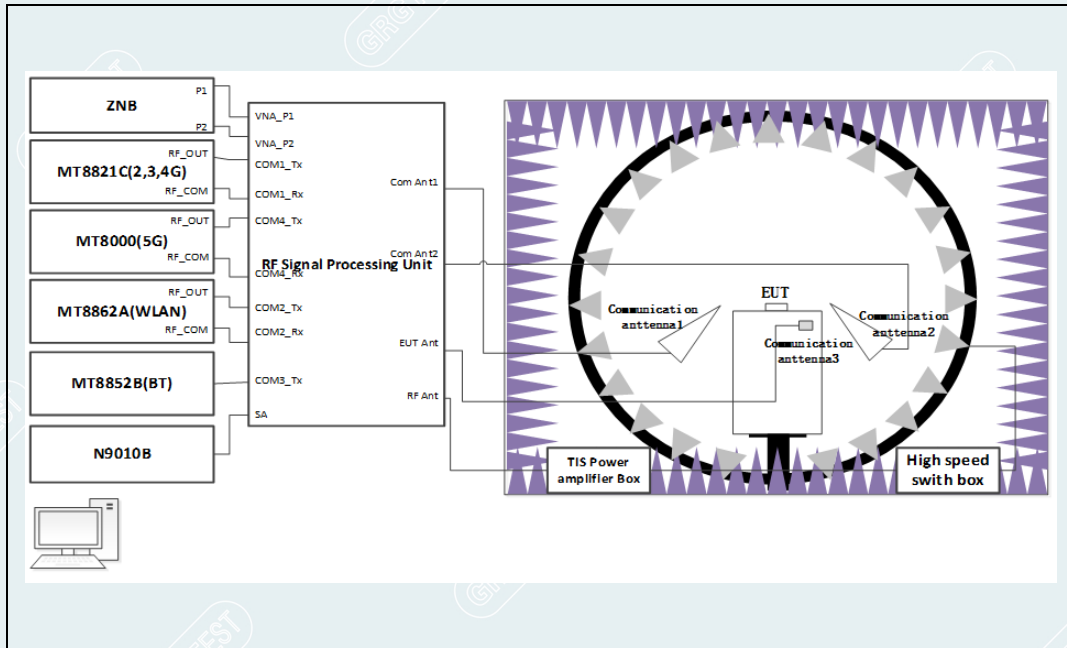

1) The antenna to be measured is erected on the test fixture, and the antenna phase center coincides with the center of the probe array ring by adjusting the antenna;

2) Connect the test cable, set the test frequency, start the test, during the test, the system supporting software should be able to automatically complete the acquisition, storage and calculation of the antenna amplitude and phase data to be measured.

d) Data processing:

The OTA system is used to test the antenna, and all the radiation information on the spherical surface of the antenna (including the polarization mode, gain, efficiency, pattern of the antenna, etc.) can be obtained through one test. Therefore, the antenna radiation indicators described in this standard can be obtained by a single test, the difference is that the data of different indicators are extracted differently.
