Remark:

 "N/A" denotes test is not applicable in this Test Report.
 All test items were verified and recorded according to the standards and without any deviation during the test.

## **3 FACILITIES AND ACCREDITATIONS**

#### 3.1 FACILITIES

All measurement facilities used to collect the measurement data are located at

1/F, Building E, Fenda Science Park, Sanwei Community, Xixiang Street, Bao'an District, Shenzhen 518126 P.R. China.

The sites are constructed in conformance with the requirements of ANSI C63.7, ANSI C63.10 and CISPR Publication 22.

#### 3.2 LABORATORY ACCREDITATIONS AND LISTINGS

| Site Description |  |
|------------------|--|
| CNAS-Lab.        | : The Certificate Registration Number is L5516.                    |
| IC-Registration  | The Certificate Registration Number is 9270A.                      |
|                  | CAB identifier:CN0074  |
| FCC- Accredited  | Test Firm Registration Number: 463705.                             |
|                  | Designation Number: CN1184   |
| A2LA-Lab.        | The Certificate Registration Number is 4298.01                     |
|                  | This laboratory is accredited in accordance with the recognized    |
|                  | International Standard ISO/IEC 17025:2005 General requirements for |
|                  | the competence of testing and calibration laboratories.            |
|                  | This accreditation demonstrates technical competence for a defined |
|                  | scope and the operation of a laboratory quality management system  |
|                  | (refer to joint ISO-ILAC-IAF Communiqué dated 8 January 2009).     |
| Name of Firm     | : Shenzhen NTEK Testing Technology Co., Ltd.                       |
| Site Location    | : 1/F, Building E, Fenda Science Park, Sanwei Community, Xixiang   |
|                  | Street, Bao'an District, Shenzhen 518126 P.R. China.               |

#### 3.3 MEASUREMENT UNCERTAINTY

The reported uncertainty of measurement  $y\pm U$ , where expended uncertainty U is based on a standard uncertainty multiplied by a coverage factor of k=2, providing a level of confidence of approximately 95 %.

| No. | Item                                | Uncertainty |
|-----|-------------------------------------|-------------|
| 1   | Conducted Emission Test             | ±2.80dB     |
| 2   | RF power, conducted                 | ±0.16dB     |
| 3   | Spurious emissions, conducted       | ±0.21dB     |
| 4   | All emissions, radiated(30MHz~1GHz) | ±2.64dB     |
| 5   | All emissions, radiated(1GHz~6GHz)  | ±2.40dB     |
| 6   | All emissions, radiated(>6GHz)      | ±2.52dB     |
| 7   | Temperature                         | ±0.5°C      |
| 8   | Humidity                            | ±2%         |
| 9   | All emissions, radiated(9KHz~30MHz) | ±6dB        |

# 4 GENERAL DESCRIPTION OF EUT

| Product Feature and Specification |  |  |
|-----------------------------------|--|--|
| Equipment                         | 5G Smart Phone   |  |
| Trade Mark                        | ulefone  |  |
| FCC ID                            | 2AOWK-5002   |  |
| Model No.                         | GQ5002   |  |
| Family Model                      | Armor 12 5G, Armor 12T 5G, Armor 12P 5G, Armor 12E 5G, Armor 12S 5G, Armor 10 5G, Armor 11 5G, Armor 11T 5G, Armor 13 5G |  |
| Model Difference                  | All the model are the same circuit and RF module, except the Model names.  |  |
| Operating Frequency               | 2402MHz~2480MHz  |  |
| Modulation                        | GFSK, π/4-DQPSK, 8-DPSK  |  |
| Number of Channels                | 79 Channels  |  |
| Antenna Type                      | PIFAAntenna  |  |
| Antenna Gain                      | 0.3 dBi  |  |
| Power supply                      | DC 3.85V/ 5180mAh, 19.94Wh from battery or DC 5V from Adapter.   |  |
| Adapter                           | Model: HJ-FC038K7-US<br>Input: AC 100-240V~50/60Hz 0.6A<br>Output: DC 5.0V3.0A<br>DC 9.0V2.0A<br>DC 12.0V1.5A            |  |
| HW Version                        | A200-04  |  |
| SW Version                        | Armor 12 5G_AH1_EEA_V01  |  |

Note 1: Based on the application, features, or specification exhibited in User's Manual, the EUT is considered as an ITE/Computing Device. More details of EUT technical specification, please refer to the User's Manual.

Note 2: The engineering test program was provided and the EUT was programmed to be in continuously transmitting mode.

ACCREDITED Certificate #4298.01

## 5 DESCRIPTION OF TEST MODES

To investigate the maximum EMI emission characteristics generates from EUT, the test system was pre-scanning tested base on the consideration of following EUT operation mode or test configuration mode which possible have effect on EMI emission level. Each of these EUT operation mode(s) or test configuration mode(s) mentioned above was evaluated respectively.

The Transmitter was operated in the normal operating mode. The TX frequency was fixed which was for the purpose of the measurements.

Test of channel included the lowest and middle and highest frequency to perform the test, then record on this report.

Those data rates (1Mbps for GFSK modulation; 2Mbps for  $\pi$ /4-DQPSK modulation; 3Mbps for 8-DPSK modulation) were used for all test.

The EUT was pretested with 3 orientations placed on the table for the radiated emission measurement -X, Y, and Z-plane. The X-plane results were found as the worst case and were shown in this report.

Carrier Frequency and Channel list:

| Channel | Frequency(MHz) |
|---------|----------------|
| 0       | 2402           |
| 1       | 2403           |
|         |                |
| 39      | 2441           |
| 40      | 2442           |
|         |                |
| 77      | 2479           |
| 78      | 2480           |

Note: fc=2402MHz+k×1MHz k=0 to 78

The following summary table is showing all test modes to demonstrate in compliance with the standard.

| For AC Conducted Emission   |                  |
|-----------------------------|------------------|
| Final Test Mode Description |                  |
| Mode 1                      | normal link mode |
|                             |                  |

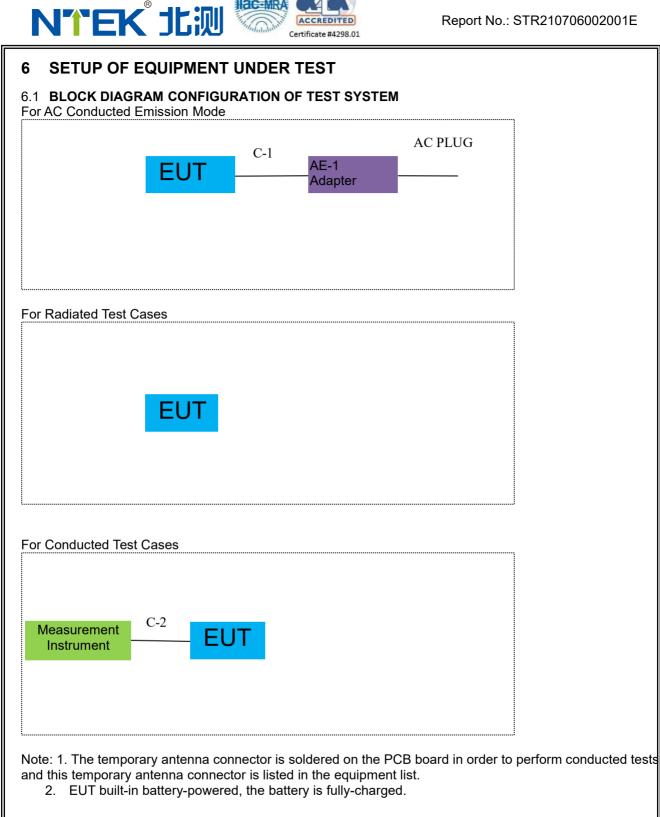

Note: AC power line Conducted Emission was tested under maximum output power.

| For Radiated Test Cases |                  |  |
|-------------------------|------------------|--|
| Final Test Mode         | Description      |  |
| Mode 1                  | normal link mode |  |
| Mode 2                  | CH00(2402MHz)    |  |
| Mode 3                  | CH39(2441MHz)    |  |
| Mode 4                  | CH78(2480MHz)    |  |

Note: For radiated test cases, the worst mode data rate 1Mbps was reported only, because this data rate has the highest RF output power at preliminary tests, and no other significantly frequencies found in conducted spurious emission.

| For Conducted Test Cases |               |  |
|--------------------------|---------------|--|
| Final Test Mode          | Description   |  |
| Mode 2                   | CH00(2402MHz) |  |
| Mode 3                   | CH39(2441MHz) |  |
| Mode 4                   | CH78(2480MHz) |  |
| Mode 5                   | Hopping mode  |  |

Note: The engineering test program was provided and the EUT was programmed to be in continuously transmitting mode.

ACCRED

# 6.2 SUPPORT EQUIPMENT

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

| Item | Equipment | Model/Type No. | Series No. | Note        |
|------|-----------|----------------|------------|-------------|
| AE-1 | Adapter   | HJ-FC038K7-US  | N/A        | Peripherals |
|      |           |                |            |             |
|      |           |                |            |             |
|      |           |                |            |             |

| Item | Cable Type | Shielded Type | Ferrite Core | Length |
|------|------------|---------------|--------------|--------|
| C-1  | USB Cable  | NO            | NO           | 1.0m   |
| C-2  | RF Cable   | YES           | NO           | 0.1m   |
|      |            |               |              |        |
|      |            |               |              |        |
|      |            |               |              |        |

#### Notes:

- (1) The support equipment was authorized by Declaration of Confirmation.
- (2) For detachable type I/O cable should be specified the length in cm in [Length] column.
- (3) "YES" is means "shielded" "with core"; "NO" is means "unshielded" "without core".

Note: Each piece of equipment is scheduled for calibration once a year except the Aux Equipment & Test Cable which is scheduled for calibration every 2 or 3 years.

## 7 TEST REQUIREMENTS

#### 7.1 CONDUCTED EMISSIONS TEST

#### 7.1.1 Applicable Standard

According to FCC Part 15.207(a)

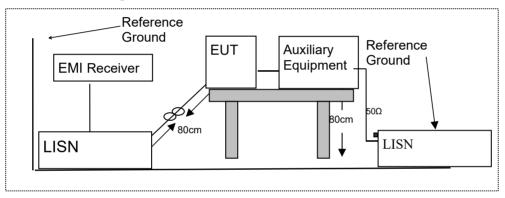

#### 7.1.2 Conformance Limit

|                | Conducted Emission Limit |         |  |
|----------------|--------------------------|---------|--|
| Frequency(MHz) | Quasi-peak               | Average |  |
| 0.15-0.5       | 66-56*                   | 56-46*  |  |
| 0.5-5.0        | 56                       | 46      |  |
| 5.0-30.0       | 60                       | 50      |  |

Note: 1. \*Decreases with the logarithm of the frequency

- 2. The lower limit shall apply at the transition frequencies
  - 3. The limit decreases in line with the logarithm of the frequency in the range of 0.15 to 0.50MHz.

#### 7.1.3 Test Configuration

#### 7.1.4 Test Procedure

According to the requirements in Section 13.1.4.1 of ANSI C63.10-2013 Conducted emissions the EUT measured in the frequency range between 0.15 MHz and 30 MHz using CISPR Quasi-Peak and average detector mode.

- 1. The EUT was placed 0.4 meter from the conducting wall of the shielding room.
- 2. The EUT was placed on a table which is 0.8m above ground plane.
- Connect EUT to the power mains through a line impedance stabilization network (LISN). All other support equipments powered from additional LISN(s). The LISN provide 50 Ohm/ 50uH of coupling impedance for the measuring instrument.
- 4. Interconnecting cables that hang closer than 40 cm to the ground plane shall be folded back and forth in the center forming a bundle 30 to 40cm long.
- I/O cables that are not connected to a peripheral shall be bundled in the center. The end of the cable
  may be terminated, if required, using the correct terminating impedance. The overall length shall not
  exceed 1 m.
- 6. LISN at least 80 cm from nearest part of EUT chassis.
- 7. The frequency range from 150KHz to 30MHz was searched.
- 8. Set the test-receiver system to Peak Detect Function and specified bandwidth(IF bandwidth=9KHz) with Maximum Hold Mode
- 9. For the actual test configuration, please refer to the related Item -EUT Test Photos.

#### 7.1.5 Test Results

Pass

## 7.2 RADIATED SPURIOUS EMISSION

#### 7.2.1 Applicable Standard

#### According to FCC Part 15.247(d) and 15.209 and ANSI C63.10-2013

#### 7.2.2 Conformance Limit

According to FCC Part 15.247(d): radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)). According to FCC Part15.205, Restricted bands

| According to FOC Fait 15.205, Restricted bands |                     |               |             |  |  |

20dBc in any 100 kHz bandwidth outside the operating frequency band. In case the emission fall within the restricted band specified on 15.205(a), then the 15.209(a) limit in the table below has to be followed.

| Restricted<br>Frequency(MHz) | Field Strength (µV/m) | Field Strength (dBµV/m) | Measurement Distance |
|------------------------------|-----------------------|-------------------------|----------------------|
| 0.009~0.490                  | 2400/F(KHz)           | 20 log (uV/m)           | 300                  |
| 0.490~1.705                  | 24000/F(KHz)          | 20 log (uV/m)           | 30                   |
| 1.705~30.0                   | 30                    | 29.5                    | 30                   |
| 30-88                        | 100                   | 40                      | 3                    |
| 88-216                       | 150                   | 43.5                    | 3                    |
| 216-960                      | 200                   | 46                      | 3                    |
| Above 960                    | 500                   | 54                      | 3                    |

Limits of Radiated Emission Measurement(Above 1000MHz)

| Froquency(MHz) | Class B (dBuV/m) (at 3M) |         |  |
|----------------|--------------------------|---------|--|
| Frequency(MHz) | PEAK                     | AVERAGE |  |
| Above 1000     | 74                       | 54      |  |

Remark :1. Emission level in dBuV/m=20 log (uV/m)

Measurement was performed at an antenna to the closed point of EUT distance of meters.
 For Frequency 9kHz~30MHz:

Distance extrapolation factor =40log(Specific distance/ test distance)(dB);

Limit line=Specific limits(dBuV) + distance extrapolation factor.

For Frequency above 30MHz:

Distance extrapolation factor =20log(Specific distance/ test distance)(dB);

Limit line=Specific limits(dBuV) + distance extrapolation factor.

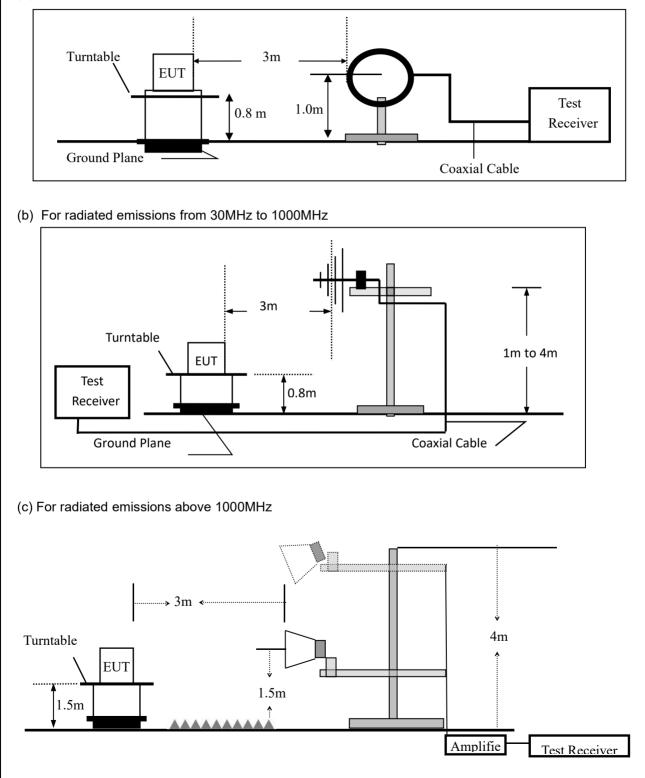

## 7.2.3 Measuring Instruments

The Measuring equipment is listed in the section 6.3 of this test report.

ACCREDITED Certificate #4298.01

#### 7.2.4 Test Configuration

#### (a) For radiated emissions below 30MHz

#### 7.2.5 Test Procedure

The test site semi-anechoic chamber has met the requirement of NSA tolerance 4 dB according to the standards: ANSI C63.10-2013. The test distance is 3m.The setup is according to the requirements in Section 13.1.4.1 of ANSI C63.10-2013 and CAN/CSA-CEI/IEC CISPR 22.

This test is required for any spurious emission that falls in a Restricted Band, as defined in Section 15.205 It must be performed with the highest gain of each type of antenna proposed for use with the EUT. Use the following spectrum analyzer settings:

| - 31 3 3                              |   |  |  |  |
|---------------------------------------|---|--|--|--|
| Spectrum Parameter                    | Setting   |  |  |  |
| Attenuation                           | Auto  |  |  |  |
| Start Frequency                       | 1000 MHz  |  |  |  |
| Stop Frequency                        | 10th carrier harmonic                             |  |  |  |
| RB / VB (emission in restricted band) | 1 MHz / 1 MHz for Peak, 1 MHz / 1 MHz for Average |  |  |  |

| Receiver Parameter     | Setting                          |  |  |  |
|------------------------|----------------------------------|--|--|--|
| Attenuation            | Auto                             |  |  |  |
| Start ~ Stop Frequency | 9kHz~150kHz / RB 200Hz for QP    |  |  |  |
| Start ~ Stop Frequency | 150kHz~30MHz / RB 9kHz for QP    |  |  |  |
| Start ~ Stop Frequency | 30MHz~1000MHz / RB 120kHz for QP |  |  |  |

- a. The measuring distance of at 3 m shall be used for measurements at frequency up to 1GHz. For frequencies above 1GHz, any suitable measuring distance may be used.
- b. The EUT was placed on the top of a rotating table 0.8 m for below 1GHz and 1.5m for above 1GHz the ground at a 3 meter. The table was rotated 360 degrees to determine the position of the highest radiation.
- c. The height of the equipment or of the substitution antenna shall be 0.8 m for below 1GHz and 1.5m for above 1GHz; the height of the test antenna shall vary between 1 m to 4 m. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- d. For the radiated emission test above 1GHz: Place the measurement antenna away from each area of the EUT determined to be a source of emissions at the specified measurement distance, while keeping the measurement antenna aimed at the source of emissions at each frequency of significant emissions, with polarization oriented for maximum response. The measurement antenna may have to be higher or lower than the EUT, depending on the radiation pattern of the emission and staying aimed at the emission source for receiving the maximum signal. The final measurement antenna elevation shall be that which maximizes the emissions. The measurement antenna elevation for maximum emissions shall be restricted to a range of heights of from 1 m to 4 m above the ground or reference ground plane.
- e. The initial step in collecting conducted emission data is a spectrum analyzer peak detector mode pre-scanning the measurement frequency range. Significant peaks are then marked and then Quasi Peak detector mode re-measured.
- f. If the Peak Mode measured value compliance with and lower than Quasi Peak Mode Limit, the EUT shall be deemed to meet QP Limits and then no additional QP Mode measurement performed.
- g. For the actual test configuration, please refer to the related Item –EUT Test Photos.
  - Note:

Both horizontal and vertical antenna polarities were tested and performed pretest to three orthogonal axis. The worst case emissions were reported

| During the radiated emission test, the Spectrum Analyzer was set with the following configurations: |          |                      |                 |  |  |  |
|---|----------|----------------------|-----------------|--|--|--|
| Frequency Band (MHz)  | Function | Resolution bandwidth | Video Bandwidth |  |  |  |
| 30 to 1000  | QP       | 120 kHz              | 300 kHz         |  |  |  |
| Ab aug 4000   | Peak     | 1 MHz                | 1 MHz           |  |  |  |
| Above 1000  | Average  | 1 MHz                | 1 MHz           |  |  |  |

Note: for the frequency ranges below 30 MHz, a narrower RBW is used for these ranges but the measured value should add a RBW correction factor (RBWCF) where RBWCF [dB] =10\*lg(100 [kHz]/narrower RBW [kHz]). , the narrower RBW is 1 kHz and RBWCF is 20 dB for the frequency 9 kHz to 150 kHz, and the narrower RBW is 10 kHz and RBWCF is 10 dB for the frequency 150 kHz to 30 MHz.

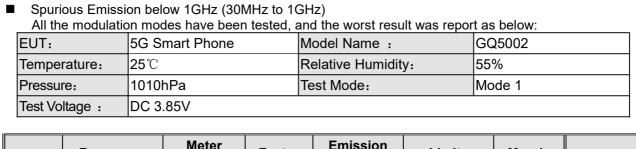

#### 7.2.6 Test Results
