Report No.: GTS201806000186F01

FCC Report (Bluetooth)

| Applicant: | Cube Tracker LLC | | |
|--|--|--|--|
| Address of Applicant: | 46980, 86th Ave, Decatur, MI 49045, US | | |
| Manufacturer/Factory: | Shenzhen Intellink Technology Co., Ltd | | |
| Address of Manufacturer: Equipment Under Test (E | #919, 9/F, Tianjian Chuangye Mansion, 7 Shangbao Road, Futian, Shenzhen, Guangdong, China E UT) | | |
| Product Name: | Cube Tracker | | |
| Model No.: | Cube Pro, C7002 | | |
| FCC ID: Applicable standards: | 2AP3S-CUBEPRO FCC CFR Title 47 Part 15 Subpart C Section 15.247 | | |
| Date of sample receipt: | June 11, 2018 | | |
| Date of Test: | June 11, 2018 - June 14, 2018 | | |
| Date of report issued: | June 14, 2018 | | |
| Test Result : | PASS * | | |

* In the configuration tested, the EUT complied with the standards specified above.

Authorized Signature:

Laboratory Manager

This results shown in this test report refer only to the sample(s) tested, this test report cannot be reproduced, except in full, without prior written permission of the company. The report would be invalid without specific stamp of test institute and the signatures of compiler and approver.

4 Test Summary

| Test Item | Section in CFR 47 | Result |
|----------------------------------|-------------------|--------|
| Antenna requirement | 15.203/15.247 (c) | Pass |
| AC Power Line Conducted Emission | 15.207 | N/A |
| Conducted Output Power | 15.247 (b)(3) | Pass |
| Channel Bandwidth | 15.247 (a)(2) | Pass |
| Power Spectral Density | 15.247 (e) | Pass |
| Band Edge | 15.247(d) | Pass |
| Spurious Emission | 15.205/15.209 | Pass |

Pass: The EUT complies with the essential requirements in the standard.

Remark: Test according to ANSI C63.4:2014 and ANSI C63.10:2013.

Measurement Uncertainty

| Test Item | Frequency Range | Measurement Uncertainty | Notes | | | |
|---|-----------------|-------------------------|-------|--|--|--|
| Radiated Emission | 9kHz ~ 30MHz | ± 4.34dB | (1) | | | |
| Radiated Emission | 30MHz ~ 1000MHz | ± 4.24dB | (1) | | | |
| Radiated Emission | 1GHz ~ 26.5GHz | ± 4.68dB | (1) | | | |
| AC Power Line Conducted Emission | 0.15MHz ~ 30MHz | ± 3.45dB | (1) | | | |
| Note (1): The measurement uncertainty is for coverage factor of k=2 and a level of confidence of 95%. | | | | | | |

5 General Information

5.1 General Description of EUT

Note:

In section 15.31(m), regards to the operating frequency range over 10 MHz, the Lowest frequency, the middle frequency, and the highest frequency of channel were selected to perform the test, and the selected channel see below:

| Channel | Frequency |
|---------------------|-----------|
| The lowest channel | 2402MHz |
| The middle channel | 2442MHz |
| The Highest channel | 2480MHz |

5.2 Test mode

| | Transmitting mode | Transmitting mode Keep the EUT in continuously transmitting mode. | | | | | |
|-----|---|---|--|--|--|--|--|
| | Remark: During the test, the test voltage was tuned from 85% to 115% of the nominal rated supply voltage, and found that the worst case was under the nominal rated supply condition. So the report just shows that condition's data. | | | | | | |
| 5.3 | Description of Supp | oort Units | | | | | |
| | None | | | | | | |
| 5.4 | Test Facility | | | | | | |
| | The test facility is recognized, certified, or accredited by the following organizations: • FCC — Registration No.: 381383 Global United Technology Services Co., Ltd., Shenzhen EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in files. Registration 381383, January 08, 2018. • Industry Canada (IC) — Registration No.: 9079A-2 | | | | | | |
| | The 3m Semi-anechoic chamber of Global United Technology Services Co., Ltd. has been rec by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 9079A-2, August 15, 2016. | | | | | | |
| 5.5 | Test Location | | | | | | |
| | All tests were performed a | at: | | | | | |
| | Global United Technology Services Co., Ltd. Address: No. 301-309, 3/F., Jinyuan Business Building, No.2, Laodong Industrial Zone, Xixiang Road, | | | | | | |

7 Test results and Measurement Data

7.1 Antenna requirement

| • | | | | |
|---|--|--|--|--|
| Standard requirement: | FCC Part15 C Section 15.203 /247(c) | | | |
| 15.203 requirement: | | | | |
| An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of ar antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the uni so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited. | | | | |
| 15.247(c) (1)(i) requiremen | t: | | | |
| operations may employ trans | 2400-2483.5 MHz band that is used exclusively for fixed. Point-to-point smitting antennas with directional gain greater than 6dBi provided the power of the intentional radiator is reduced by 1 dB for every 3 dB that the na exceeds 6dBi. | | | |
| E.U.T Antenna: | | | | |
| The antenna is integral antenna | a, the best case gain of the antenna is 0dBi | | | |
| The antenna is integral antenna, the best case gain of the antenna is 0dBi | | | | |

7.2 Conducted Emissions

| Test Requirement: | FCC Part15 C Section 15.207 | | | | |
|-----------------------|---|---------------------|-----------|--|--|
| Test Method: | ANSI C63.10:2013 | | | | |
| Test Frequency Range: | 150KHz to 30MHz | | | | |
| Class / Severity: | Class B RBW=9KHz, VBW=30KHz, Sweep time=auto | | | | |
| Receiver setup: | | | | | |
| Limit: | | Limit (c | BuV) | | |
| Linte. | Frequency range (MHz) | Quasi-peak Average | | | |
| | 0.15-0.5 | 66 to 56* | 56 to 46* | | |
| | 0.5-5 | 56 | 46 | | |
| | 5-30 | 60 | 50 | | |
| | * Decreases with the logarithn | n of the frequency. | | | |
| Test setup: | Reference Plane | | _ | | |
| | 40cm 80cm AUX E.U.T Equipment E.U.T Test table/Insulation plane Remarkc E.U.T: Equipment Under Test LISN: Line Impedence Stabilization Network Test table height=0.8m | Filter AC pow | ver | | |
| Test procedure: | The E.U.T and simulators are connected to the main power through a line impedance stabilization network (L.I.S.N.). This provides a 50ohm/50uH coupling impedance for the measuring equipment. The peripheral devices are also connected to the main power through a LISN that provides a 50ohm/50uH coupling impedance with 50ohm termination. (Please refer to the block diagram of the test setup and photographs). Both sides of A.C. line are checked for maximum conducted interference. In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed | | | | |
| Test Instruments: | according to ANSI C63.10: | | | | |
| Test mode: | Refer to section 5.2 for details | | | | |
| Test results: | N/A | | | | |
| | 13/73 | | | | |

7.3 Conducted Output Power

| Test Requirement: | FCC Part15 C Section 15.247 (b)(3) |
|-------------------|---|
| Test Method: | ANSI C63.10:2013 and KDB558074 D01 DTS Meas Guidance V04 |
| Limit: | 30dBm |
| Test setup: | Spectrum Analyzer E.U.T Non-Conducted Table Ground Reference Plane |
| Test Instruments: | Refer to section 6.0 for details |
| Test mode: | Refer to section 5.2 for details |
| Test results: | Pass |

| Test Method: | ANSI C63.10:2013 and KDB558074 D01 DTS Meas Guidance V04 | | | | | |
| Limit: | In any 100 kHz bandwidth outside the frequency band in which the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. | | | | | |
| Test setup: | Spectrum Analyzer E.U.T Non-Conducted Table Ground Reference Plane | | | | | |
| Test Instruments: | Refer to section 6.0 for details | | | | | |
| Test mode: | Refer to section 5.2 for details | | | | | |
| Test results: | Pass | | | | | |

7.7.2 Radiated Emission Method

Global United Technology Services Co., Ltd. No. 301-309, 3/F., Jinyuan Business Building, No.2, Laodong Industrial Zone, Xixiang Road, Baoan District, Shenzhen, Guangdong, China 518102 Telephone: +86 (0) 755 2779 8480 Fax: +86 (0) 755 2779 8960

| Test Procedure: | 1. The EUT was placed on the top of a rotating table (0.8m for below 1G and 1.5m for above 1G) above the ground at a 3 meter camber. The table was rotated 360 degrees to determine the position of the highest radiation. |
|-------------------|--|
| | The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower. |
| | 3. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement. |
| | 4. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rota table was turned from 0 degrees to 360 degrees to find the maximum reading. |
| | The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode. |
| | 6. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet. |
| Test Instruments: | Refer to section 6.0 for details |
| Test mode: | Refer to section 5.2 for details |
| Test results: | Pass |

Measurement data:

Remark:

Pre-scan all kind of the place mode (X-axis, Y-axis, Z-axis), and found the Y-axis which it is worse case.

■ 9 kHz ~ 30 MHz

The low frequency, which started from 9 kHz to 30 MHz, was pre-scanned and the result which was 20 dB lower than the limit line per 15.31(o) was not reported.

Remark:

1. Final Level =Receiver Read level + Correct factor

2. *"*", means this data is the too weak instrument of signal is unable to test.*

3. Correct factor = Antenna Factor + Cable Loss – Preamplifier Factor
