Measurement/Technical Report for Mottech Water Solutions Ltd.

Irrigation Controller

Piccolo XR PLUS

FCC ID: 2APCUMO515A

This report concerns: Original Grant:
 Class II change: X
 Class I change:

Equipment Class: TNB – Licensed Non-Broadcast Station Transmitter

Limits used: 47CFR Parts 2; 90

Measurement procedure used is KDB 971168 D03 v01 and KDB 935210 D05 v01r01

Substitution Method used as in ANSI/TIA-603-D: 2010.

Application for Certification

1. General Information

1.1 Administrative Information

Manufacturer: Mottech Water Solutions Ltd.

Manufacturer's Address: 11 Hamelacha Street
Rosh-Ha'Ayin 4809121
Israel
Tel: +972 54-597-0428
Fax: +972 9-961- 6029

Manufacturer's Representative: Amir Givon

Equipment Under Test (E.U.T): Irrigation Controller

Equipment Model No.: Piccolo XR PLUS

Equipment Serial No.: Not designated

Date of Receipt of E.U.T: May 15, 2018

Start of Test: May 15, 2018

End of Test: July 24, 2018

Test Laboratory Location: I.T.L (Product Testing) Ltd.
1 Batsheva St,
Lod,
Israel 7116002

Test Specifications: FCC Parts 2; 90

1.2 List of Accreditations

The EMC laboratory of I.T.L. is accredited by/registered with the following bodies:

1. The American Association for Laboratory Accreditation (A2LA) (U.S.A.), Certificate No. 1152.01.
2. The Federal Communications Commission (FCC) (U.S.A.), FCC Designation Number is IL1005.
3. The Israel Ministry of the Environment (Israel), Registration No. 1104/01.
4. Industry Canada (Canada), IC File No.: 46405-4025; Site No. IC 4025A-1, IC 4025A-2.

I.T.L. Product Testing Ltd. is accredited by the American Association for Laboratory Accreditation (A2LA) and the results shown in this test report have been determined in accordance with I.T.L.'s terms of accreditation unless stated otherwise in the report.

1.3 Product Description

The Piccolo–XR Plus is an intelligent, microprocessor based unit that can be used to monitor and control local units in a multi-unit communication network.

Piccolo–XR Plus units communicate data to a PIU while functioning as intelligent nodes in Distributed I/O monitor and control systems. The Piccolo–XR Plus is often used in irrigation and water distribution systems (i.e. irrigation valves, water meters, fertilizing meters, various sensors, flushing filters, and other non-irrigation devices).

The Piccolo–XR Plus is ideal for use in applications where very low power consumption is essential. The Piccolo–XR Plus is also available in an outdoor resistant housing (IP66), designed to resist harsh environment, such as exposure to sun, dust, and pouring rain.

1.4 Test Methodology

Both conducted and radiated testing were performed according to the procedures in KDB 971168 D03 v01, KDB 935210 D05 v01r01 and ANSI/TIA-603-D: 2010.

Radiated testing was performed at an antenna to EUT distance of 3 meters.

1.5 Test Facility

Both conducted and radiated emissions tests were performed at I.T.L.'s testing facility in Lod, Israel. I.T.L.'s EMC Laboratory is accredited by A2LA, certificate No. 1152.01 and its FCC Designation Number is IL1005.

1.6 Measurement Uncertainty

Conducted Emission (CISPR 11, EN 55011, CISPR 22, EN 55022, ANSI C63.4)
0.15 – 30 MHz:

Expanded Uncertainty (95% Confidence, K=2):
 ± 3.44 dB

Radiated Emission (CISPR 11, EN 55011, CISPR 22, EN 55022, ANSI C63.4) for
open site 30-1000MHz:

Expanded Uncertainty (95% Confidence, K=2):
 ± 4.98 dB

2. System Test Configuration

2.1 Justification

1. On 02/07/2019 a FCC ID Change Grant was approved for the E.U.T. under FCC ID: 2APCUMO515A.
2. Subsequently, the following C2PC changes were made to the E.U.T. (See customer's declaration on page 9.
 - a) An expansion card has been added;
 - b) The cable connector has been replaced;
 - c) The back cover has been replaced;
 - d) The front logo plate has been replaced;
 - e) The connection between the original card and the expansion card is done outside the unit case;
 - f) There is no change in the radio of the original device.
3. The following C2PC tests were performed: RF Power Output, Occupied Bandwidth, Spurious Emissions at Antenna Terminals and Spurious Radiated
4. The E.U.T. meets the requirements for a C2PC.
5. The E.U.T operates in the 450-470MHz bands and was evaluated while transmitting at: 450.0125MHz, 460.0125MHz and 469.9875MHz.

2.2 EUT Exercise Software

No exercise software was used to achieve compliance.

2.3 Special Accessories

(Piccolo Interface Unit) PIU unit: model- F4604B
s/n: 870STS12KF

2.4 Equipment Modifications

No modifications were necessary in order to achieve compliance.

2.5 Configuration of Tested System

Figure 1. Conducted Test Set-Up

Figure 2. Radiated Test Set-Up

May 13, 2019

To: Federal Communications Commission Authorization and Evaluation Division

Subject: Permissive Change Class II for Mottech Water Solutions Ltd, Piccolo XR Plus
Controller - FCC ID: 2APCUMO515A

To whom it may concern,

On 02/07/2019, an FCC ID Change Grant was approved for the E.U.T. which is now under FCC ID: 2APCUMO515A.

The following C2PC changes were made to the device.

1. An expansion card has been added;
2. The cable connector has been replaced;
3. The back cover has been replaced;
4. The front logo plate has been replaced;
5. The connection between the original card and the expansion card is done outside the unit case;
6. The device was originally certified as body worn. It is no longer a body worn device but is a fixed irrigation controller. The distance between the user and the EUT is at least 20cm.
7. There is no change in the radio of the original device.

We request a Permissive Change Class II based on the above.

Thank you for your assistance.

Amir Givon

4. RF Power Output

4.1 Test Specification

FCC Part 90, Subpart I, Section 205

4.2 Test Procedure

(Temperature (20°C)/ Humidity (53%RH))

The E.U.T. antenna terminal was connected to the Spectrum Analyzer through an external attenuator (21.0 dB) and an appropriate coaxial cable. Special attention was taken to prevent Spectrum Analyzer RF input overload.

4.3 Test Limit

The power limit is 20.8dBm.

4.4 Test Results

UNIT	Operation Frequency	Reading	Limit	Margin
(Original/New)	(MHz)	(dBm)	(dBm)	(dB)
Original	450.0125	20.2	20.8	-0.6
	460.0125	20.3	20.8	-0.5
	469.9875	20.3	20.8	-0.5
New	450.0125	19.9	20.8	-0.9
	460.0125	19.6	20.8	-1.2
	469.9875	19.7	20.8	-1.1

6. Spurious Emissions at Antenna Terminals

6.1 Test Specification

FCC Part 90, Subpart I, Section: 217

6.2 Test Procedure

(Temperature (20°C)/ Humidity (52%RH))

The E.U.T. antenna terminal was connected to the spectrum analyzer through an external attenuator and an appropriate coaxial cable (max loss =32.0 dB). The spectrum analyzer was set to 300Hz resolution BW for the frequency range 9.0-150.0 kHz, 10.0 kHz for the frequency range 150.0 kHz–30.0 MHz, 100.0 kHz for the frequency range 30.0–1000.0 MHz, and 1.0MHz for the frequency range 1.0-5.0 GHz.

6.3 Test Limit

The power of any emission outside of the authorized operating frequency ranges must be attenuated more than 30dBc.

6.4 Test Results

JUDGEMENT: Passed

See additional information in *Figure 15* to *Figure 26*.

Figure 27 Test Equipment Used

8. Spurious Radiated Emission

8.1 Test Specification

FCC, Part 27, Subpart C, Section 27.53(h)

8.2 Test Procedure

(Temperature (28°C)/ Humidity (57%RH))

The test method was based on ANSI/TIA-603-D: 2010, Section 2.2.12 Unwanted Emissions: Radiated Spurious.

The E.U.T. operation mode and test set-up are as described in Section 2 of this report.

For measurements between 0.009MHz-30.0MHz:

The E.U.T was tested inside the shielded room at a distance of 3 meters and the E.U.T was placed on a non-metallic table, 0.8 meters above the ground. The frequency range 0.009MHz-30MHz was scanned. The readings were maximized by the turntable azimuth between 0-360°, and the antenna polarization.

The emissions were measured at a distance of 3 meters.

For measurements between 30.0MHz-1.0GHz:

A preliminary measurement to characterize the E.U.T was performed inside the shielded room at a distance of 3 meters, using peak detection mode and broadband antennas. The preliminary measurements produced a list of the highest emissions. The E.U.T was then transferred to the open site, and placed on a remote-controlled turntable. The E.U.T was placed on a non-metallic table, 0.8 meters above the ground. The frequency range 30.0MHz -1.0GHz was scanned and the list of the highest emissions was verified and updated accordingly.

The readings were maximized by adjusting the antenna height between 1-4 meters, the turntable azimuth between 0-360°, and the antenna polarization.

The emissions were measured at a distance of 3 meters.

For measurements between 1.0GHz-5.0GHz:

The E.U.T was tested inside the shielded room at a distance of 3 meters and the E.U.T was placed on a non-metallic table, 1.5 meters above the ground. The frequency range 1.0GHz -5.0GHz was scanned. The readings were maximized by the turntable azimuth between 0-360°, and the antenna polarization.

The emissions were measured at a distance of 3 meters.

The E.U.T. was replaced by a substitution antenna (dipole 30MHz-1GHz, Horn Antenna above 1GHz) driven by a signal generator. The height was readjusted for maximum reading. The signal generator level was adjusted to obtain the same reading on the EMI receiver as in step (a).

The signals observed in step (a) were converted to radiated power using:

$$P_d(\text{dBm}) = P_g(\text{dBm}) - \text{Cable Loss (dB)} + \text{Substitution Antenna Gain (dBd)}$$

P_d = Dipole equivalent power (result).

P_g = Signal generator output level.

A Peak detector was used for this test.

The test was performed in 3 operation frequencies: low, mid and high.

Testing was performed when the RF port was connected to 50 Ω termination.

The table below describe only results with the highest radiation.

8.3 Test Limit

The power of any emission outside of the authorized operating frequency ranges must be attenuated more than 30dBc.

8.4 Test Results

Carrier Channel	Freq.	Antenna Pol.	Maximum Peak Level	Signal Generator RF Output	Cable Loss	Antenna Gain	Effective Radiated Power Level	Limit	Margin
(MHz)	(MHz)	(V/H)	(dB μ V/m)	(dBm)	(dB)	(dBd)	(dBm)	(dBm)	(dB)

9.4 Correction factors for biconical antenna – ITL # 1356

Frequency [MHz]	ITL 1356 AF [dB/m]
30	13.00
35	10.89
40	10.59
45	10.63
50	10.12
60	9.26
70	7.74
80	6.63
90	8.23
100	11.12
120	13.16
140	13.07
160	14.80
180	16.95
200	17.17

9.5 Correction factors for log periodic antenna – ITL # 1349

Frequency [MHz]	ITL 1349 AF [dB/m]
200	11.58
250	12.04
300	14.76
400	15.55
500	17.85
600	18.66
700	20.87
800	21.15
900	22.32
1000	24.22

**9.6 Correction factors for
Horn ANTENNA**

**Double –Ridged Waveguide
ITL # 1352**

FREQUENCY	AFE	FREQUENCY	AFE
(GHz)	(dB/m)	(GHz)	(dB/m)
