

Hot Pepper™

HPP-L55B

Quick Start Guide

Knowing Your Phone

Home Screen

phone message browser camera

The Basic Applications

Setup for the 1st time:

Click "start" to activate the "Setup Wizard".

Connect to Wi-Fi:

Enter Settings > Network & Internet > Wi-Fi.

Setup the screen lock:

Setting>Security & location>Screen lock

Unlock the screen:

Slide up the padlock icon.

Changing ringtone/audio setting:

Setting>Sound>Phone ringtone.

Transfer files to computer:

Connect via Bluetooth, an USB or an app.

FCC Warning

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Specific Absorption Rate (SAR) information:

This Smart Phone meets the government's requirements for exposure to radio waves. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons regardless of age or health.

FCC RF Exposure Information and Statement

The SAR limit of USA (FCC) is 1.6 W/kg averaged over one gram of tissue. Device types: smart phone (FCC ID: 2APD4-A95J) has also been tested against this SAR limit. The highest SAR value reported under this standard during product certification for use at the ear is 0.514W/kg and when properly worn on the body is 1.262W/kg. the Hotspot SAR value is 1.262W/kg, the simultaneous transmission SAR value is 0.966W/kg on the head and 1.405W/ kg on the body. This device was tested for typical body-worn operations with the

back of the handset kept 10mm from the body. To maintain compliance with FCC RF exposure requirements, use accessories that maintain a 10mm separation distance between the user's body and the back of the handset. The use of belt clips, holsters and similar accessories should not contain metallic components in its assembly. The use of accessories that do not satisfy these requirements may not comply with FCC RF exposure requirements, and should be avoided.

Body-worn Operation

This device was tested for typical body-worn operations. To comply with RF exposure requirements, a minimum separation distance of 10mm must be maintained between the user's body and the handset, including the antenna. Third-party belt-clips, holsters, and similar accessories used by this device should not contain any metallic components. Body-worn accessories that do not meet these requirements may not comply with RF exposure requirements and should be avoided. Use only the supplied or an approved antenna.

HAC Regulations

The EUT was tested and rated under the American National Standard Institute (ANSI) C63.19-2011 **hearing aid compatibility ((HAC))** standards. The ANSI standard for hearing aid compatibility contains two types of ratings:

- **M-Ratings:** Rating for less radio frequency interference to enable acoustic coupling with hearing aids.

- **T-Ratings:** Rating for inductive coupling with hearing aids in telecoil mode.

This device complies with the FCC HAC requirements has also been tested E-Field, H-Field and T-Coil, the worst test result of M rating is M3, the T rating is T3.

M-Ratings: Phones rated M3 or M4 meet FCC requirements and are likely to generate less interference to hearing devices than phones that are not rated. M4 is the better/higher of the two ratings. Your device is rated M4.

T-Ratings: Phones rated T3 or T4 meet FCC requirements and are likely to be more usable with a hearing aid's telecoil than phones that are not rated. T4 is the better/higher of the two ratings. Your device is rated T3.
