## EUT Setup

Below 1 GHz:

## Above 1 GHz:

The radiated emission tests were performed in the 3 meters test site, using the setup accordance with the ANSI C63.10-2013. The specification used was the FCC $15 \S 15.209,15.205$ and 15.231.

## EMI Test Receiver Setup

The system was investigated from 30 MHz to 5 GHz .
During the radiated emission test, the test receiver was set with the following configurations:

| Frequency Range | RBW | Video B/W | IF B/W | Measurement |
| :---: | :---: | :---: | :---: | :---: |
| $30 \mathrm{MHz}-1000 \mathrm{MHz}$ | 100 kHz | 300 kHz | 120 kHz | PK |
| Above 1 GHz | 1 MHz | 3 MHz | $/$ | PK |

## Test Procedure

Maximizing procedure was performed on the highest emissions to ensure that the EUT complied with all installation combinations.

All final data was recorded in the Quasi-peak detection mode from 30 MHz to 1 GHz , Peak and average detection mode above 1 GHz .

## Corrected Amplitude \& Margin Calculation

The Corrected Amplitude is calculated by adding the Antenna Loss and Cable Loss, and subtracting the Amplifier Gain from the Meter Reading. The basic equation is as follows:

Corrected Amplitude $=$ Meter Reading + Antenna Loss + Cable Loss - Amplifier Gain
The "Margin" column of the following data tables indicates the degree of compliance with the applicable limit. For example, a margin of 5.8 dB means the emission is 5.8 dB below the limit. The equation for margin calculation is as follows:

Margin $=$ Limit - Corrected Amplitude

## Test Results Summary

According to the data in the following table, the EUT complied with the FCC \&15.205, §15.209, \$15.231 (b).
