To Whom It May Concern:

About the question why the label is placed on cords near supply plug, we want to place the caution labels on the cord tag because of two reasons,

- A) All other labels are placed on the power supply cord, according to the clause 124.1.1 Product/Cord Tag Markings from UL Standard for Safety for Seasonal and Holiday Decorative Products, UL 588 ; and Clauses 5.17.4.1.1 Cord tag markings from CSA Standard for safety for Decorative lighting products, CSA C22.2 No. 37. a) Clause 124.1.1 of UL 588:

124.1.1 The markings specified in this section shall be located on a tag attached to the product within 6 inches (152.4 mm) of the face of the attachment plug, current tap, direct plug-in unit, or power inlet, or on the product.

- b) CSA C22.2 No. 37-2017

5.17.4.1.1 Markings indicated in this Clause shall be located no more than 152.4 mm from attachment plug, current tap, direct plug-in unit, or on the product on a cord tag.

- B) It is very important to help the users to get FCC/ICES information when they read the caution labels, instead of look for other parts.

Sincerely,

Shandong Neon King Electronics Co., Ltd
