Client Declaration Letter

To whom it may concern, We have declared below featured for FCC equipment authorization, Device FCC ID: 2APQFWB3301 (1) DFS Device Master Client with Radar detection capability N/A (2) Active / Passive Scanning, ad-hoc mode access point capability Frequency Active Scanning(the passive scanning (where Ad Hoc Mode Access and (MHz) device can transmit a the device is can listen only or WIFI Direct point probe (beacon)) 5150-5250 Yes Yes Yes Yes Yes Yes 5250-5350 No Yes No No	nt ability
Device FCC ID: 2APQFWB3301 (1) DFS Device□Master □Client with Radar detection capability , ■ Client without radar detection capability □ N/A (2) Active / Passive Scanning, ad-hoc mode access point capability Frequency Active Scanning(the passive scanning (where Ad Hoc Mode Access paint (MHz) device can transmit a the device is can listen only probe (beacon)) with no probes) capability capability 5150-5250 Yes Yes Yes	nt ability
(1) DFS Device□Master □Client with Radar detection capability , ■Client without radar detection capability □ N/A (2) Active / Passive Scanning, ad-hoc mode access point capability Frequency Active Scanning(the passive scanning (where device can transmit a probe (beacon)) with no probes) Ad Hoc Mode or WIFI Direct point capability 5150-5250 Yes Yes Yes	nt ability
Client without radar detection capability □ N/A (2) Active / Passive Scanning, ad-hoc mode access point capability Frequency	nt ability
(2) Active / Passive Scanning, ad-hoc mode access point capability Frequency	nt ability
Frequency Band (MHz) Active Scanning(the device can transmit a probe (beacon)) Yes Ad Hoc Mode Accer the device is can listen only with no probes) Yes Ad Hoc Mode or WIFI Direct capability Capability Yes Yes	nt ability
Band (MHz) device can transmit a probe (beacon)) with no probes) the device is can listen only capability capa yes Trequency Active dealining (the passive seathing seathing seathing (the passive seathing (the passive seathing s	nt ability
probe (beacon)) with no probes) capability capa 5150-5250 Yes Yes Yes	ability
5150-5250 Yes Yes Yes Yes	
5150-5250 1es 100 No.	3
5250-5350 No Yes No No	
5470-5725 No Yes No No	
5725-5850 No No No No	
(3) Country code selection ability - □Yes ,■No	
If yes, please explain how it was implemented: (please also help to provide detail of options for	
each country selection):	
(4) Meet 15.202 requirements —■Yes ,□No Please check below: □A master device is defined as a device operating in a mode in which it has the capability to transmit without receiving an enabling signal. In this mode it is able to select a channel and initiate a network by sending enabling signals to other devices ■A client device is defined as a device operating in a mode in which the transmissions of the device are under control of the master. A device in client mode is not able to initiate a network. (5)For client devices that have software configuration control to operate in different modes (active scanning in some and passive scanning in others) in different bands (devices with multiple equipment classes or those that operate on non-DFS frequencies) or modular devices which configure the modes of operations through software, the application must provide software and operations description on how the software and / or hardware is implemented to ensure that proper operations modes cannot be modified by end user or an installer ■Apply, □No Apply, (If apply, please help to provide explanation on it was implement, and how software was controlled) The software cannot be modified by the end user. Changes are prevented through the use of a proprietary secure boot process.	

Sincerely yours,

U. Thaty
