## **FCC PART 22 TEST REPORT**

### FCC Part 22

Report Reference No.....:: LCS190305123AEF FCC ID.....:: 2APTIS55ER8 Date of Issue. ....:: April 16, 2019

Testing Laboratory Name ..... Shenzhen LCS Compliance Testing Laboratory Ltd.

1/F., Xingyuan Industrial Park, Tongda Road, Bao'an Avenue, Address.....

Bao'an District, Shenzhen, Guangdong, China

Applicant's name..... Panasonic India Pvt Ltd

Address..... 12th Floor Ambience Tower, Ambience Island, NH-8, Gurgaon,

Haryana-122002, India

Test specification .....::

FCC CFR Title 47 Part 2, Part 22

TIA-603-E: 2016 Standard .....:

KDB 971168 D01

Test Report Form No...... LCSEMC-1.0

Master TRF...... Dated 2011-03

Test item description .....:: **Smart Phone** 

Trade Mark .....: Panasonic

Test Model....: **ELUGA RAY 800** 

Listed Models ....: N/A

Modulation Type .....: QPSK, 16QAM

DC 3.85V by Rechargeable Li-polymer Battery(4000mAh) Rating .....:

Recharged by DC 5V Adapter

V2.2 Hardware version .....:

Software version..... EB-90S55ER8v1022

Result....: **PASS** 

Compiled by:

Supervised by:

Approved by:

Leo Lee/ Administrators

Calvin Weng/ Technique principal

Gavin Liang/ Manager

#### TEST STANDARDS 1

The tests were performed according to following standards:

FCC Part 22 (10-1-16 Edition): Private Land Mobile Radio Services.

TIA-603-E March 2016: Land Mobile FM or PM Communications Equipment Measurement and Performance Standards.

47 CFR FCC Part 15 Subpart B: Unintentional Radiators

FCC Part 2: FREQUENCY ALLOCA-TIONS AND RADIO TREATY MAT-TERS; GENERAL RULES AND REG-**ULATIONS** 

ANSI C63.4:2014: Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz

FCCKDB971168 D01 Power Meas License Digital Systems v03r01

DC 3.85V

# 2.4 Short description of the Equipment under Test (EUT)

## 2.4.1 GeneralDescription

ELUGA RAY 800 is subscriber equipment in the WCDMA/GSM/LTE system. The GSM/GPRS/EDGE frequency band includes GSM850, GSM900, DCS1800 and PCS1900. The HSPA/UMTS frequency band is Band I/VIII. LTE frequency band is band 1, band 3, band 5 and band 8. The LTE band 1, band 3 and band 8 is not allowed in U.S. and will be disabled for U.S. models. The LTE frequency band 5 test data included in this report. The Smart Phone implements such functions as RF signal receiving/transmitting, HSPA/UMTS/LTE and GSM/GPRS/EDGE protocol processing, voice, video MMS service and etc. Externally it provides SIM card interface.

NOTE: Unless otherwise noted in the report, the functional boards installed in the units shall be selected from the below list, but not means all the functional boards listed below shall be installed in one unit.

## 2.5 Internal Identification of AE used during the test

| AE ID* | Description                     |
|--------|---------------------------------|
| AE1    | Rechargeable Li-polymer Battery |
| AE2    | Adapter                         |

AE2

Model: A8A-050200U-US1

INPUT: AC 100-240V, 50/60Hz 0.35A

OUTPUT: DC 5V/2A

\*AE ID: is used to identify the test sample in the lab internally.

## 2.6 Normal Accessory setting

Fully charged battery was used during the test.

## 2.7 EUT configuration

The following peripheral devices and interface cables were connected during the measurement:

- supplied by the manufacturer
- O supplied by the lab

| 0 | Power Cable | Length (m):   | 1 |
|---|-------------|---------------|---|
|   |             | Shield :      | / |
|   |             | Detachable :  | / |
| 0 | Multimeter  | Manufacturer: | / |
|   |             | Model No. :   | / |

## 2.8 Related Submittal(s) / Grant (s)

This submittal(s) (test report) is intended for FCC ID: 2APTIS55ER8 filing to comply with FCC Part 22, Part 24 and Part 27 Rules

#### 2.9 **Modifications**

No modifications were implemented to meet testing criteria.

# 2.10 General Test Conditions/Configurations

## 2.10.1 Test Environment

| EnvironmentParameter | SelectedValuesDuringTests |       |  |  |
|----------------------|---------------------------|-------|--|--|
| Relative Humidity    | Ambient                   |       |  |  |
| Temperature          | TN Ambient                |       |  |  |
|                      | VL                        | 3.40V |  |  |
| Voltage              | VN                        | 3.85V |  |  |
|                      | VH                        | 4.30V |  |  |

NOTE:VL=lower extreme testvoltage VN=nominal voltage VH=upper extreme testvoltage TN=normal temperature

# TEST ENVIRONMENT

## 3.1 Address of the test laboratory

## **Shenzhen LCS Compliance Testing Laboratory Ltd**

1/F., Xingyuan Industrial Park, Tongda Road, Bao'an Avenue, Bao'an District, Shenzhen, Guangdong,

The sites are constructed in conformance with the requirements of ANSI C63.4 (2014) and CISPR Publication 22.

## 3.2 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

FCC Registration Number. is 254912. Industry Canada Registration Number. is 9642A-1. ESMD Registration Number. is ARCB0108. UL Registration Number. is 100571-492. TUV SUD Registration Number. is SCN1081. TUV RH Registration Number. is UA 50296516-001 NVLAP Registration Code is 600167-0

#### 3.3 **Environmental conditions**

During the measurement the environmental conditions were within the listed ranges:

| Temperature:          | 15-35 ° C    |
|-----------------------|--------------|
|                       |              |
| Humidity:             | 30-60 %      |
|                       |              |
| Atmospheric pressure: | 950-1050mbar |

## 3.4 Test Description

Cellular Band (824-849MHz pairedwith 869-894MHz)(band 5)

| Test Item                                  | FCC Rule<br>No.     | Requirements   | Verdict |

#### 3.6 **Measurement uncertainty**

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities. The measurement uncertainty was calculated for all measurements listed in this test report acc. to ETSI TR 100 028"Electromagnetic compatibilityand Radio spectrum Matters (ERM); Uncertainties in the measurement of mobile radio equipment characteristics" and is documented in the Shenzhen LCS Compliance Testing Laboratory Ltd.quality system acc. to DIN EN ISO/IEC 17025. Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

Hereafter the best measurement capability for Shenzhen LCS Compliance Testing Laboratory Ltd. is reported:

| Test                                | Range      | Measurement<br>Uncertainty | Notes |
|-------------------------------------|------------|----------------------------|-------|
| Radiated Emission                   | 30~1000MHz | 3.10 dB                    | (1)   |
| Radiated Emission                   | 1~18GHz    | 3.80 dB                    | (1)   |
| Radiated Emission                   | 18-40GHz   | 3.90 dB                    | (1)   |
| Conducted Disturbance               | 0.15~30MHz | 1.63 dB                    | (1)   |
| Conducted Power                     | 9KHz~18GHz | 0.61 dB                    | (1)   |
| Spurious RF Conducted Emission      | 9KHz~40GHz | 1.22 dB                    | (1)   |
| Band Edge Compliance of RF Emission | 9KHz~40GHz | 1.22 dB                    | (1)   |
| Occuiped Bandwidth                  | 9KHz~40GHz | -                          | (1)   |

<sup>(1)</sup> This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=1.96.

# TEST CONDITIONS AND RESULTS

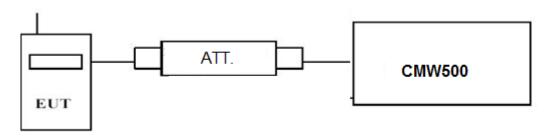

## 4.1 Output Power

### **TEST APPLICABLE**

During the process of testing, the EUT was controlled via R&S Digital Radio Communication tester (CMW500) to ensure max power transmission and proper modulation. This result contains output power and EIRP measurements for the EUT. In all cases, output power is within the specified limits.

## 4.1.1. Conducted Output Power

## **TEST CONFIGURATION**

### **TEST PROCEDURE**

### **Conducted Power Measurement:**

- Place the EUT on a bench and set it in transmitting mode.
- b) Connect a low loss RF cable from the antenna port to a CMW500 by an Att.
- EUT Communicate with CMW500 then selects a channel for testing.
- Add a correction factor to the display CMW500, and then test.

## **TEST RESULTS**

- 1. We were tested all RB Configuration refer 3GPP TS136 521 for each Channel Bandwidth of LTE FDD Band 5; recorded worst case for each Channel Bandwidth of LTE FDD Band 5.
- 2. For E-UTRA Band 5, please refer to Appendix D: Section D.1

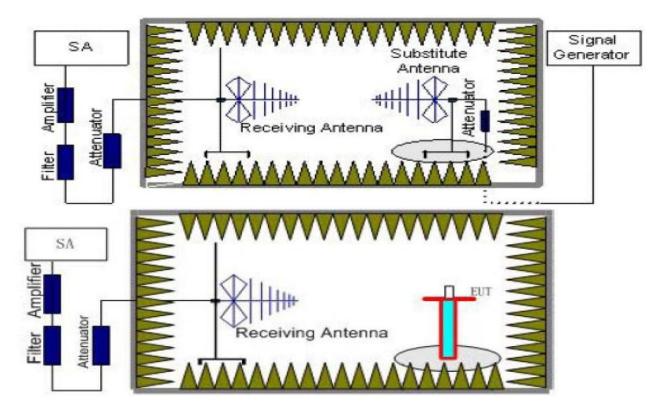

## 4.1.2. Radiated Output Power

## **LIMIT**

This is the test for the maximum radiated power from the EUT.

Per §22.913(2) Extend coverage on a secondary basis into cellular unserved areas, as those areas are defined in §22.949, the ERP of base transmitters and cellular repeaters of such systems must not exceed 1000 Watts. The ERP of mobile transmitters and auxiliary test transmitters must not exceed 7 Watts.

### **TEST CONFIGURATION**

## **TEST PROCEDURE**

- 1. EUT was placed on a 1.50 meter high non-conductive stand at a 3 meter test distance from the receive antenna. A receiving antenna was placed on the antenna mast 3 meters from the EUT for emission measurements. The height of receiving antenna is 1.50m. Detected emissions were maximized at each frequency by rotating the EUT through 360° and adjusting the receiving antenna polarization. The radiated emission measurements of all transmit frequencies in three channels (High, Middle, Low) were measured with peak detector.
- 2. A log-periodic antenna or double-ridged waveguide horn antenna shall be substituted in place of the EUT. The log-periodic antenna will be driven by a signal generator and the level will be adjusted till the same power value on the spectrum analyzer or receiver. The level of the spurious emissions can be calculated through the level of the signal generator, cable loss, the gain of the substitution antenna and the reading of the spectrum analyzer or receiver.
- 3. The EUT is then put into continuously transmitting mode at its maximum power level during the test. Set Test Receiver or Spectrum RBW=1MHz, VBW=3MHz, And the maximum value of the receiver should be recorded as (P<sub>r</sub>).
- 4. The EUT shall be replaced by a substitution antenna. In the chamber, an substitution antenna for the frequency band of interest is placed at the reference point of the chamber. An RF Signal source for the frequency band of interest is connected to the substitution antenna with a cable that has been constructed to not interfere with the radiation pattern of the antenna. A power (P<sub>Mea</sub>) is applied to the input of the substitution antenna, and adjust the level of the signal generator output until the value of the receiver reach the previously recorded (P<sub>r</sub>). The power of signal source (P<sub>Mea</sub>) is recorded. The test should be performed by rotating the test item and adjusting the receiving antenna polarization.

- 5. A amplifier should be connected to the Signal Source output port. And the cable should be connect between the Amplifier and the Substitution Antenna. The cable loss (Pcl) ,the Substitution Antenna Gain (Ga) and the Amplifier Gain (P<sub>Aq</sub>) should be recorded after test.
  - The measurement results are obtained as described below:
  - Power(EIRP)= $P_{Mea}$ +  $P_{Ag}$   $P_{cl}$  +  $G_a$
- This value is EIRP since the measurement is calibrated using an antenna of known gain (2.15 dBi) and known input power.
- 7. ERP can be calculated from EIRP by subtracting the gain of the dipole, ERP = EIRP-2.15dBi.

### **TEST RESULTS**

### **Radiated Measurement:**

### Remark:

- We were tested all RB Configuration refer 3GPP TS136 521 for each Channel Bandwidth of LTE FDD Band 5; recorded worst case for each Channel Bandwidth of LTE FDD Band 5.
- 2.  $EIRP=P_{Mea}(dBm)-P_{cl}(dB)+P_{Ag}(dB)+G_a(dBi)$
- 3. ERP = EIRP 2.15dBi as EIRP by subtracting the gain of the dipole.
- 4. Margin = Emission Level Limit
- We test the H direction and V direction recorded worst case

## 4.2 Peak-to-Average Ratio (PAR)

## LIMIT

The Peak-to-Average Ratio (PAR) of the transmission may not exceed 13 dB.

## **TEST CONFIGURATION**

## **TEST PROCEDURE**

- 1. Refer to instrument's analyzer instruction manual for details on how to use the power statistics/CCDF function;
- 2. Set resolution/measurement bandwidth ≥ signal's occupied bandwidth:
- 3. Set the number of counts to a value that stabilizes the measured CCDF curve;
- 4. Set the measurement interval as follows:
  - 1). for continuous transmissions, set to 1 ms,
  - 2). for burst transmissions, employ an external trigger that is synchronized with the EUT burst timing sequence, or use the internal burst trigger with a trigger level that allows the burst to stabilize and set the measurement interval to a time that is less than or equal to the burst duration.
- 5. Record the maximum PAPR level associated with a probability of 0.1%.

## **TEST RESULTS**

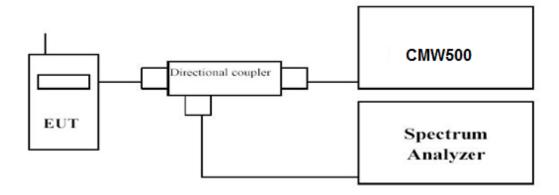

- 1. We were tested all RB Configuration refer 3GPP TS136 521 for each Channel Bandwidth of LTE FDD Band 5; recorded worst case for each Channel Bandwidth of LTE FDD Band 5.
- 2. For E-UTRA Band 5, please refer to Appendix D: Section D.2

## 4.3 Occupied Bandwidth and Emission Bandwidth

## LIMIT

N/A

## **TEST CONFIGURATION**

## **TEST PROCEDURE**

The transmitter output was connected to a calibrated coaxial cable and coupler, the other end of which was connected to a spectrum analyzer. The occupied bandwidth was measured with the spectrum analyzer at low, middle and high channel in each band. The -26dBc Emission bandwidth was also measured and recorded. Set RBW was set to about 1% of emission BW, VBW≥3 times RBW.

-26dBc display line was placed on the screen (or 99% bandwidth), the occupied bandwidth is the delta frequency between the two points where the display line intersects the signal trace.

## **TEST RESULTS**

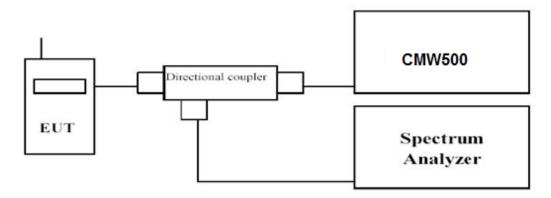

- We were tested all RB Configuration refer 3GPP TS136 521 for each Channel Bandwidth of LTE FDD Band 5; recorded worst case for each Channel Bandwidth of LTE FDD Band 5.
- 2. For E-UTRA Band 5, please refer to Appendix D: Section D.3

#### 4.4 Band Edge compliance

## LIMIT

For LTE FDD Band 5:Per FCC §22.917 the power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least 43 + 10log(P) dB.

## **TEST CONFIGURATION**

### **TEST PROCEDURE**

- 1. The transmitter output port was connected to base station.
- The RF output of EUT was connected to the power meter by RF cable and attenuator, the path loss was compensated to the results for each measurement.
- 3. Set EUT at maximum power through base station.
- 4. Select lowestand highest channels for each band and different modulation.
- 5. Measure Band edge using RMS (Average) detector by spectrum

## **TEST RESULTS**

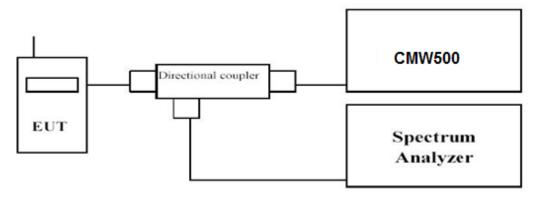

- We were tested all RB Configuration refer 3GPP TS136 521 for each Channel Bandwidth of LTE FDD Band 5; recorded worst case for each Channel Bandwidth of LTE FDD Band 5.
- For E-UTRA Band 5, please refer to Appendix D: Section D.45

#### 4.5 **Spurious Emssion on Antenna Port**

## LIMIT

For LTE FDD Band 5:Per FCC §22.917 the power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least 43 + 10log(P) dB.

## **TEST CONFIGURATION**

## **TEST PROCEDURE**

The EUT was setup according to TIA-603-E

- Place the EUT on a bench and set it in transmitting mode.
- Connect a low loss RF cable from the antenna port to a spectrum analyzer and CMW500 by a Directional Couple.
- EUT Communicate with CMW500, then select a channel for testing. C.
- d. Add a correction factor to the display of spectrum, and then test.
- The resolution bandwidth of the spectrum analyzer was setsufficient scans were taken to show the out of band Emission if any up to 10<sup>th</sup> harmonic.
- Please refer to following tables for test antenna conducted emissions.

| Working<br>Frequency | Sub range<br>(GHz) | RBW   | VBW   | Sweep time<br>(s) |
|----------------------|--------------------|-------|-------|-------------------|
|                      | 0.000009~0.000015  | 1KHz  | 3KHz  | Auto              |
| LTE FDD Band 5       | 0.000015~0.03      | 10KHz | 30KHz | Auto              |
|                      | 0.03~26            | 1 MHz | 3 MHz | Auto              |

### **TEST RESULTS**

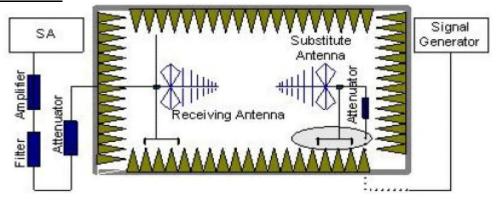

- 1. We were tested all RB Configuration refer 3GPP TS136 521 for each Channel Bandwidth of LTE FDD Band 5; recorded worst case for each Channel Bandwidth of LTE FDD Band 5.
- 2. For E-UTRA Band 5, please refer to Appendix D: Section D.5

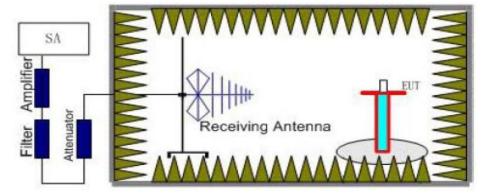

## 4.6 Radiated Spurious Emssion

## <u>LIM</u>IT

For LTE FDD Band 5:Per FCC §22.917 the power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least 43 + 10log(P) dB.

## **TEST CONFIGURATION**

### **TEST PROCEDURE**

- 1. EUT was placed on a 1.50 meter high non-conductive stand at a 3 meter test distance from the receive antenna. A receiving antenna was placed on the antenna mast 3 meters from the EUT for emission measurements. The height of receiving antenna is 1.50m. Detected emissions were maximized at each frequency by rotating the EUT through 360° and adjusting the receiving antenna polarization. The radiated emission measurements of all transmit frequencies in three channels (High, Middle, Low) were measured with peak detector.
- A log-periodic antenna or double-ridged waveguide horn antenna shall be substituted in place of the EUT. The log-periodic antenna will be driven by a signal generator and the level will be adjusted till the same power value on the spectrum analyzer or receiver. The level of the spurious emissions can be calculated through the level of the signal generator, cable loss, the gain of the substitution antenna and the reading of the spectrum analyzer or receiver.
- The EUT is then put into continuously transmitting mode at its maximum power level during the test. Set Test Receiver or Spectrum RBW=1MHz, VBW=3MHz, And the maximum value of the receiver should be recorded as (P<sub>r</sub>).
- The EUT shall be replaced by a substitution antenna. In the chamber, an substitution antenna for the frequency band of interest is placed at the reference point of the chamber. An RF Signal source for the frequency band of interest is connected to the substitution antenna with a cable that has been constructed to not interfere with the radiation pattern of the antenna. A power (P<sub>Mea</sub>) is applied to the input of the substitution antenna, and adjust the level of the signal generator output until the value of the receiver reach the previously recorded (P<sub>r</sub>). The power of signal source (P<sub>Mea</sub>) is recorded. The test should be performed by rotating the test item and adjusting the receiving antenna polarization.
- 5. A amplifier should be connected to the Signal Source output port. And the cable should be connect between the Amplifier and the Substitution Antenna. The cable loss (Pcl), the Substitution Antenna Gain (Ga) and the Amplifier Gain (P<sub>Ag</sub>) should be recorded after test.
  - The measurement results are obtained as described below:
  - $Power(EIRP) = P_{Mea} + P_{Ag} P_{cl} + G_{a}$
- 6. This value is EIRP since the measurement is calibrated using an antenna of known gain (2.15 dBi) and known input power.
- 7. ERP can be calculated from EIRP by subtracting the gain of the dipole, ERP = EIRP -2.15dBi.
- 8. In order to make sure test results more clearly, we set frequency range and sweep time for difference frequency range as follows table:

| Working<br>Frequency | Subrange<br>(GHz) | RBW    | VBW    | Sweep time<br>(s) |
|----------------------|-------------------|--------|--------|-------------------|
|                      | 0.00009~0.15      | 1KHz   | 3KHz   | 30                |
|                      | 0.00015~0.03      | 10KHz  | 30KHz  | 10                |
|                      | 0.03~1            | 100KHz | 300KHz | 10                |
| LTE FDD Band 5       | 1~2               | 1 MHz  | 3 MHz  | 2                 |
|                      | 2~5               | 1 MHz  | 3 MHz  | 3                 |
|                      | 5~8               | 1 MHz  | 3 MHz  | 3                 |
|                      | 8~9               | 1 MHz  | 3 MHz  | 3                 |

### **TEST LIMITS**

According to FCC §22.917 specify that the power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least 43 + 10 log(P) dB. The specification that emissions shall be attenuated below the transmitter power (P) by at least 43 + 10 log (P) dB, translates in the relevant power range (1 to 0.001 W) to -13 dBm. At 1 W the specified minimum attenuation becomes 43 dB and relative to a 30 dBm (1 W) carrier becomes a limit of -13 dBm. At 0.001 W (0 dBm) the minimum attenuation is 13 dB, which again yields a limit of -13 dBm. In this way a translation of the specification from relative to absolute terms is carried out.

| Frequency      | Channel | Frequency Range | Verdict |
|----------------|---------|-----------------|---------|
|                | Low     | 9KHz -9GHz      | PASS    |
| LTE FDD Band 5 | Middle  | 9KHz -9GHz      | PASS    |
|                | High    | 9KHz -9GHz      | PASS    |

## **TEST RESULTS**

### Remark:

- 1. We were tested all RB Configuration refer 3GPP TS136 521 for each Channel Bandwidth of LTE FDD Band 5; recorded worst case for each Channel Bandwidth of LTE FDD Band 5.
- 2.  $EIRP=P_{Mea}(dBm)-P_{cl}(dB)+G_{a}(dBi)$
- 3. We were not recorded other points as values lower than limits.
- 4. Margin = EIRP Limit

#### 4.7 Frequency Stability under Temperature & Voltage Variations

### LIMIT

According to FCC §2.1055,§22.355 requirement, the frequency stability shall be sufficient to ensure that the fundamental emissions stay within the authorized bands of operation and should not exceed 2.5ppm.

## **TEST CONFIGURATION**

### **TEST PROCEDURE**

The EUT was setup according to TIA-603-E

### Frequency Stability Under Temperature Variations:

In order to measure the carrier frequency under the condition of AFC lock, it is necessary to make measurements with the EUT in a "call mode". This is accomplished with the use of R&S CMW500 DIGITAL RADIO COMMUNICATION TESTER.

- 1. Measure the carrier frequency at room temperature.
- 2. Subject the EUT to overnight soak at -30°C.
- 3. With the EUT, powered via nominal voltage, connected to the CMW500 and in a simulated call on middle channel for LTE band 5; measure the carrier frequency. These measurements should be made within 2 minutes of Powering up the EUT, to prevent significant self-warming.
- 4. Repeat the above measurements at 10°C increments from -30°C to +50°C. Allow at least 1.5 hours at each temperature, unpowered, before making measurements.
- 5. Re-measure carrier frequency at room temperature with nominal voltage. Vary supply voltage from minimum voltage to maximum voltage, in 0.1Volt increments re-measuring carrier frequency at each voltage. Pause at nominal voltage for 1.5 hours unpowered, to allow any self-heating to stabilize, before continuing.
- 6. Subject the EUT to overnight soak at +50°C.
- 7. With the EUT, powered via nominal voltage, connected to the CMW500 and in a simulated call on the centre channel, measure the carrier frequency. These measurements should be made within 2 minutes of Powering up the EUT, to prevent significant self-warming.
- 8. Repeat the above measurements at 10 °C increments from +50°C to -30°C. Allow at least 1.5 hours at each temperature, unpowered, before making measurements
- 9. At all temperature levels hold the temperature to +/- 0.5℃ during the measurement procedure.

## Frequency Stability Under Voltage Variations:

Set chamber temperature to 20°C. Use a variable AC power supply / DC power source to power the EUT and set the voltage to rated voltage. Set the spectrum analyzer RBW low enough to obtain the desired frequency resolution and recorded the frequency.

Reduce the input voltage to specify extreme voltage variation (±15%) and endpoint, record the maximum frequency change.

## **TEST RESULTS**

### Remark:

We were tested all RB Configuration refer 3GPP TS136 521 for each Channel Bandwidth of LTE FDD Band 5; recorded worst case for each Channel Bandwidth of LTE FDD Band 5.
