| front | 17 mm | 17 mm | 22 mm | 20 mm | 20 mm |
|  |  |  |  |  |  |
| back | 21 mm | 23 mm | 24 mm | 24 mm | 24 mm |
|  |  |  |  |  |  |
| bottom | 20 mm | 20 mm | $\backslash$ | $\backslash$ | $\backslash$ |
|  |  |  |  |  |  |
| top | $\backslash$ | $\backslash$ | 25 mm | 22 mm | 22 mm |
|  |  |  |  |  |  |
| left | $\backslash$ | 14 mm | 20 mm | $\backslash$ | $\backslash$ |
|  |  |  |  |  |  |
| right | $\backslash$ | $\backslash$ | $\backslash$ | $\backslash$ | $\backslash$ |

Per FCC KDB Publication 616217 D04v01r02, this device was tested by the manufacturer to determine the proximity sensor triggering distances for the rear and bottom edge of the device. The measured output power within $\pm 5 \mathrm{~mm}$ of the triggering points (or until touching the phantom) is included for rear and each applicable edge.

To ensure all production units are compliant it is necessary to test SAR at a distance 1 mm less than the smallest distance from the device and SAR phantom (determined from these triggering tests according to the KDB 616217 D04v01r02) with the device at maximum output power without power reduction. These SAR tests are included in addition to the SAR tests for the device touching the SAR phantom, with reduced power.

We tested the power and got the different proximity sensor triggering distances for front/rear/bottom edge for ANTO. The manufacturer has declared $17 \mathrm{~mm} / 21 \mathrm{~mm} / 20 \mathrm{~mm}$ is the most conservative triggering distance for ANT0 with front/rear/bottom edge. So base on the most conservative triggering distance of $17 \mathrm{~mm} / 21 \mathrm{~mm} / 20 \mathrm{~mm}$, additional SAR measurements were required at $16 \mathrm{~mm} / 20 \mathrm{~mm} / 19 \mathrm{~mm}$ from the highest SAR position between front/rear/bottom edge of ANTO.

We tested the power and got the different proximity sensor triggering distances for front/rear /bottom/left edge for ANT1. The manufacturer has declared $17 \mathrm{~mm} / 23 \mathrm{~mm} / 20 \mathrm{~mm} / 14 \mathrm{~mm}$ is the most conservative triggering distance for ANT1 with front/rear/bottom/left edge. So base on the most conservative triggering distance of $17 \mathrm{~mm} / 23 \mathrm{~mm} / 20 \mathrm{~mm} / 14 \mathrm{~mm}$, additional SAR measurements were required at $16 \mathrm{~mm} / 22 \mathrm{~mm} / 19 \mathrm{~mm} / 13 \mathrm{~mm}$ from the highest SAR position between front/rear/bottom/left edge of ANT1.

We tested the power and got the different proximity sensor triggering distances for front/rear /top/left edge for ANT3. The manufacturer has declared $22 \mathrm{~mm} / 24 \mathrm{~mm} / 25 \mathrm{~mm} / 20 \mathrm{~mm}$ is the most conservative triggering distance for ANT3 with front/rear/top/left edge. So base on the most ©Copyright. All rights reserved by CTTL.
conservative triggering distance of $22 \mathrm{~mm} / 24 \mathrm{~mm} / 25 \mathrm{~mm} / 20 \mathrm{~mm}$, additional SAR measurements were required at $21 \mathrm{~mm} / 23 \mathrm{~mm} / 24 \mathrm{~mm} / 19 \mathrm{~mm}$ from the highest SAR position between front/rear/top/left edge of ANT3.

We tested the power and got the different proximity sensor triggering distances for front/rear /top edge for ANT4. The manufacturer has declared $20 \mathrm{~mm} / 24 \mathrm{~mm} / 22 \mathrm{~mm}$ is the most conservative triggering distance for ANT4 with front/rear/top edge. So base on the most conservative triggering distance of $20 \mathrm{~mm} / 24 \mathrm{~mm} / 22 \mathrm{~mm}$, additional SAR measurements were required at $19 \mathrm{~mm} / 23 \mathrm{~mm} / 21 \mathrm{~mm}$ from the highest SAR position between front/rear/top edge of ANT4.

We tested the power and got the different proximity sensor triggering distances for front/rear /top edge for ANT5. The manufacturer has declared $20 \mathrm{~mm} / 24 \mathrm{~mm} / 22 \mathrm{~mm}$ is the most conservative triggering distance for ANT5 with front/rear/top edge. So base on the most conservative triggering distance of $20 \mathrm{~mm} / 24 \mathrm{~mm} / 22 \mathrm{~mm}$, additional SAR measurements were required at $19 \mathrm{~mm} / 23 \mathrm{~mm} / 21 \mathrm{~mm}$ from the highest SAR position between front/rear/top edge of ANT5.

Per FCC KDB Publication 616217 D04v01r02, the influence of table tilt angles to proximity sensor triggering is determined by positioning each edge that contains a transmitting antenna, perpendicular to the flat phantom, at the smallest sensor triggering test distanceby rotating the device around the edge next to the phantom in $\leq 10^{\circ}$ increments until the tablet is $\pm 45^{\circ}$ or more from the vertical position at $0^{\circ}$.

The front/rear edge evaluation

The bottom/top edge evaluation

## The left/right edge evaluation

Based on the above evaluation, we come to the conclusion that the sensor triggering is not released and normal maximum output power is not restored within the $\pm 45^{\circ}$ range at the smallest sensor triggering test distance declared by manufacturer.
