

DFS Client Declaration Letter

Date:2021-05-17

We have	declared	below	featured	for	device,

FCC ID:2APXW-WTRVL5G

⊠ Client witho	Radar detection out radar detection	n capability					
• • • • • • • • • • • • • • • • • • • •	ssive Scanning, a		· · · · · · · · · · · · · · · · · · ·	1	TAME: D.		
Frequency	Scanning Plan	Ad Hoc Mode	Access point	WiFi Direct	WiFi Direct		
Band (MHz)		Capability	Capability	Group Owner	Group Client		
2412 - 2462	Active	NO	Yes	Yes	Yes		
5180 – 5240	Active	NO	Yes	Yes	NO		
5260 – 5320	Passive	NO	NO	NO	NO		
5500 – 5580	Passive	NO	NO	NO	NO		
5660 – 5700	Passive	NO	NO	NO	NO		
5745 - 5825	Active	NO	Yes	NO	Yes		
If yes, please explain how it was implemented: (please also help to provide detail of options for each country selection) (4) Transmission in 5600 MHz to 5650 MHz is notched - Yes, No No							
A master device is defined as a device operating in a mode in which it has the capability to transmit without receiving an enabling signal. In this mode it is able to select a channel and initiate a network by sending enabling signals to other devices. A client device is defined as a device operating in a mode in which the transmissions of the device are under control of the master. A device in client mode is not able to initiate a network.							
(6) For client devices that have software configuration control to operate in different modes (active scanning in some and passive scanning in others) in different bands (devices with multiple equipment classes or those that operate on non-DFS frequencies) or modular devices which configure the modes of operations through software, the application must provide software and operations description on how the software and / or hardware is implemented to ensure that proper operations modes cannot be modified by end user or an installer. Apply, Not Apply, (If apply, please help to provide explanation on it was implement, and how							

software was controlled).
