5260 – 5320	Passive	No	No	No	Yes
5500 – 5580	Passive	No	No	No	Yes
5660 – 5720	Passive	No	No	No	Yes
5745 - 5825	Active	Yes	Yes	Yes	Yes
 (3) Country code selection capability to end user-					
(5) Meet Part 15.202 requirement - X Yes, No					
A master device is defined as a device operating in a mode in which it has the capability to transmit without receiving an enabling signal. In this mode it is able to select a channel and initiate a network by sending enabling signals to other devices. A client device is defined as a device operating in a mode in which the transmissions of the device are under control of the master. A device in client mode is not able to initiate a network.					
scanning in so classes or thos operations thro software and / end user or an	me and passive see that operate or bugh software, the or hardware is im installer.	scanning in other n non-DFS freque e application mus aplemented to en	s) in different bar encies) or modula st provide softwar sure that proper o	ar devices which or re and operations operations modes	nt modes (active multiple equipment configure the modes of description on how the s cannot be modified by mplement, and how

software was controlled).
