

Global United Technology Services Co., Ltd.

Report No.: GTS201911000087F01

TEST Report

Applicant: Shenzhen FuShiKe Electronic Co., Ltd

Address of Applicant: F2, Building C, Kedashi Technology Park, No. 42 Xinzhang Road,

Guanlan Street, Longhua New District, Shenzhen, China 518110

Shenzhen FuShiKe Electronic Co., Ltd Manufacturer/Factory:

Address of

F2, Building C, Kedashi Technology Park, No. 42 Xinzhang Road, Manufacturer/Factory:

Guanlan Street, Longhua New District, Shenzhen, China 518110

Equipment Under Test (EUT)

Product Name: Bluetooth headset

Model No.: K12,K10E,S1, S2,K6P,K10I,T600,T200,T300,K15,K16,K10D,

Q5,Q5S,Q2,J32,T3

Trade Mark: N/A

FCC ID: 2APZE - K12

Applicable standards: FCC CFR Title 47 Part 15 Subpart C Section 15.247

Date of sample receipt: Oct.10,2019

Date of Test: Oct.10,2019-Nov.12, 2019

Date of report issued: Nov.12, 2019

Test Result: PASS *

In the configuration tested, the EUT complied with the standards specified above.

Authorized Signature:

Robinson Lo Laboratory Manager

This results shown in this test report refer only to the sample(s) tested, this test report cannot be reproduced, except in full, without prior written permission of the company. The report would be invalid without specific stamp of test institute and the signatures of compiler and approver.

4 Test Summary

| Test Item | Section in CFR 47 | Result |
|--------------------------------------------|-------------------|--------|
| Antenna Requirement | 15.203/15.247 (c) | Pass |
| AC Power Line Conducted Emission | 15.207 | Pass |
| Conducted Peak Output Power | 15.247 (b)(1) | Pass |
| 20dB Occupied Bandwidth | 15.247 (a)(1) | Pass |
| Carrier Frequencies Separation | 15.247 (a)(1) | Pass |
| Hopping Channel Number | 15.247 (a)(1) | Pass |
| Dwell Time | 15.247 (a)(1) | Pass |
| Pseudorandom Frequency Hopping Sequence | 15.247(b)(4) | Pass |
| Radiated Emission | 15.205/15.209 | Pass |
| Band Edge | 15.247(d) | Pass |

Remarks:

- 1. Pass: The EUT complies with the essential requirements in the standard.
- 2. Test according to ANSI C63.10:2013

Measurement Uncertainty

| Test Item | Frequency Range | Frequency Range Measurement Uncertainty | | | | |
|-------------------------------------------------------------|------------------------------------|-----------------------------------------|------|--|--|--|
| Radiated Emission | 30MHz-200MHz | 3.8039dB | (1) | | | |
| Radiated Emission | 200MHz-1GHz | 3.9679dB | (1) | | | |
| Radiated Emission | 1GHz-18GHz | 4.29dB | (1) | | | |
| Radiated Emission | 18GHz-40GHz | 3.30dB | (1) | | | |
| AC Power Line Conducted Emission 0.15MHz ~ 30MHz 3.44dB (1) | | | | | | |
| Note (1): The measurement uncert | tainty is for coverage factor of k | =2 and a level of confidence of 9 | 95%. | | | |

5 General Information

5.1 General Description of EUT

| Product Name: | Bluetooth headset |
|---------------------------------------|---------------------------------------------------------|
| Model No.: | K12 |
| Series model: | K10E,S1,S2,K6P,K10I,T600,T200,T300,K15,K16,K10D,Q5,Q5S, |
| | Q2,J32,T3 |
| Test sample(s) ID: | GTS201911000087F01 |
| Sample(s) Status: | Engineer sample |
| Operation Frequency: | 2402MHz~2480MHz |
| Channel numbers: | 79 |
| Channel separation: | 1MHz |
| Modulation type: | GFSK, π/4-DQPSK, 8-DPSK |
| Antenna Type: | Chip |
| Antenna gain: | 2.00dBi |
| Power supply: | DC 3.7V From Adapter and DC 5V From external circuit |
| | DC 3.7 V FIORI Adapter and DC 3V FIORI external circuit |
| Adapter | Mode:EP-TA20CBC |
| (Auxiliary test suppled by test Lab): | Input:AC100-240V-50/60Hz, 0.5A |
| | Output:DC 5V,2A |

| Operation Frequency each of channel | | | | | | | | | |

| 14 | 2415MHz | 34 | 2435MHz | 54 | 2455MHz | 74 | 2475MHz | | |
| 15 | 2416MHz | 35 | 2436MHz | 55 | 2456MHz | 75 | 2476MHz | | |
| 16 | 2417MHz | 36 | 2437MHz | 56 | 2457MHz | 76 | 2477MHz | | |
| 17 | 2418MHz | 37 | 2438MHz | 57 | 2458MHz | 77 | 2478MHz | | |
| 18 | 2419MHz | 38 | 2439MHz | 58 | 2459MHz | 78 | 2479MHz | | |
| 19 | 2420MHz | 39 | 2440MHz | 59 | 2460MHz | 79 | 2480MHz | | |
| 20 | 2421MHz | 40 | 2441MHz | 60 | 2461MHz | | | | |

Note:

In section 15.31(m), regards to the operating frequency range over 10 MHz, the Lowest frequency, the middle frequency, and the highest frequency of channel were selected to perform the test, and the selected channel see below:

| Channel | Frequency |
|---------------------|-----------|
| The lowest channel | 2402MHz |
| The middle channel | 2441MHz |
| The Highest channel | 2480MHz |

5.2 Test mode

Transmitting mode Keep the EUT in continuously transmitting mode.

Remark: During the test, the test voltage was tuned from 85% to 115% of the nominal rated supply voltage, and found that the worst case was under the nominal rated supply condition. So the report just shows that condition's data.

5.3 Description of Support Units

None.

5.4 Deviation from Standards

None.

5.5 Abnormalities from Standard Conditions

None.

5.6 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

• FCC —Registration No.: 381383

Global United Technology Services Co., Ltd., Shenzhen EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in files. Registration 381383.

• IC —Registration No.: 9079A

The 3m Semi-anechoic chamber of Global United Technology Services Co., Ltd. has been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 9079A

• NVLAP (LAB CODE:600179-0)

Global United Technology Services Co., Ltd., is accredited by the National Voluntary Laboratory Accreditation Program (NVLAP). LAB CODE:600179-0

5.7 Test Location

All tests were performed at:

Global United Technology Services Co., Ltd.

Address: No. 123-128, Tower A, Jinyuan Business Building, No.2, Laodong Industrial Zone, Xixiang Road, Baoan District, Shenzhen, Guangdong, China 518102

Tel: 0755-27798480 Fax: 0755-27798960

7 Test results and Measurement Data

7.1 Antenna requirement

Standard requirement: FCC Part15 C Section 15.203 /247(c)

15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

15.247(c) (1)(i) requirement:

(i) Systems operating in the 2400-2483.5 MHz band that is used exclusively for fixed. Point-to-point operations may employ transmitting antennas with directional gain greater than 6dBi provided the maximum conducted output power of the intentional radiator is reduced by 1 dB for every 3 dB that the directional gain of the antenna exceeds 6dBi.

E.U.T Antenna:

The antenna is chip antenna, the best case gain of the is 2.00dBi, reference to the appendix II for details

7.8 Pseudorandom Frequency Hopping Sequence

Test Requirement:

FCC Part15 C Section 15.247 (a)(1)/g/h requirement:

a(1): Frequency hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25 kHz or the 20 dB bandwidth of the hopping channel, whichever is greater.

Alternatively. Frequency hopping systems operating in the 2400-2483.5 MHz band may have hopping channel carrier frequencies that are separated by 25 kHz or two-thirds of the 20 dB bandwidth of the hopping channel, whichever is greater, provided the systems operate with an output power no greater than 125 mW. The system shall hop to channel frequencies that are selected at the system hopping rate from a Pseudorandom ordered list of hopping frequencies. Each frequency must be used equally on the average by each transmitter. The system receivers shall have input bandwidths that match the hopping channel bandwidths of their corresponding transmitters and shall shift frequencies in synchronization with the transmitted signals.

(g) Frequency hopping spread spectrum systems are not required to employ all available hopping channels during each transmission. However, the system, consisting of both the transmitter and the receiver, must be designed to comply with all of the regulations in this section should the transmitter be presented with a continuous data (or information) stream. In addition, a system employing short transmission bursts must comply with the definition of a frequency hopping system and must distribute its transmissions over the minimum number of hopping channels specified in this section.

(h) The incorporation of intelligence within a frequency hopping spread spectrum system that permits the system to recognize other users within the spectrum band so that it individually and independently chooses and adapts its hopsets to avoid hopping on occupied channels is permitted. The coordination of frequency hopping systems in any other manner for the express purpose of avoiding the simultaneous occupancy of individual hopping frequencies by multiple transmitters is not permitted.

EUT Pseudorandom Frequency Hopping Sequence

The pseudorandom sequence may be generated in a nine-stage shift register whose 5th and 9th stage outputs are added in a modulo-two addition stage. And the result is fed back to the input of the first stage. The sequence begins with the first ONE of 9 consecutive ONEs; i.e. the shift register is initialized with nine ones.

- Number of shift register stages: 9
- Length of pseudo-random sequence: 29-1 = 511 bits
- · Longest sequence of zeros: 8 (non-inverted signal)

Linear Feedback Shift Register for Generation of the PRBS sequence

An example of Pseudorandom Frequency Hopping Sequence as follow:

Each frequency used equally on the average by each transmitter.

The system receivers have input bandwidths that match the hopping channel bandwidths of their corresponding transmitters and shift frequencies in synchronization with the transmitted signals.

it permits the system to recognize other users within the spectrum band so that it individually and independently chooses and adapts its hopsets to avoid hopping on occupied channels is permitted.

7.9 Band Edge

7.9.1 Conducted Emission Method

| Test Requirement: | FCC Part15 C Section 15.247 (d) | | | | |

| 2483.5 | 44.57 | -5.85 | 38.72 | 54 | -15.28 | AVG |

Remark: Factor = Antenna Factor + Cable Loss – Pre-amplifier.

Remark: All the other emissions not reported were too low to read and deemed to comply with FCC limit.

7.10 Spurious Emission

7.10.1 Conducted Emission Method

| Test Requirement: | FCC Part15 C Section 15.247 (d) | | | | |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|
| Test Method: | ANSI C63.10:2013 | | | | |
| Limit: | In any 100 kHz bandwidth outside the frequency band in which the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. | | | | |
| Test setup: | Spectrum Analyzer E.U.T Non-Conducted Table Ground Reference Plane | | | | |
| Test Instruments: | Refer to section 6.0 for details | | | | |
| Test mode: | Refer to section 5.2 for details | | | | |
| Test results: | Pass | | | | |

7.10.2 Radiated Emission Method

| Test Requirement: | FCC Part15 C Section 15.209 | | | | | | | |
|-----------------------|---------------------------------------|---------------------|------------|-------------|------|-------|------------|-----------------------|
| Test Method: | ANSI C63.10:2013 | | | | | | | |
| Test Frequency Range: | 9kHz to 25GHz | | | | | | | |
| Test site: | Measurement Distance: 3m | | | | | | | |

|-------------------|---------------|-------|---------|-----|---------|----------|
| Test voltage: | AC 120V, 60Hz | | | | | |
| Test results: | Pass | | | | | |

Measurement data:

Remarks:

- 1. During the test, pre-scan the GFSK, $\pi/4$ -DQPSK, 8-DPSK modulation, and found the GFSK modulation which it is worse case.
- 2. Pre-scan all kind of the place mode (X-axis, Y-axis, Z-axis), and found the Y-axis which it is worse case.

■ 9kHz~30MHz

The low frequency, which started from 9 kHz to 30 MHz, was pre-scanned and the result which was 20 dB lower than the limit line per 15.31(o) was not reported.

For 30MHz-1GHz

| No. | Mk. | Freq. | Reading Level | Correct Factor | Measure- ment | Limit | Over | |

Remark: Factor = Antenna Factor + Cable Loss – Pre-amplifier.

Remark:

- (1) Data of measurement within this frequency range shown "--- " in the table above means the reading of emissions are attenuated more than 20dB below the permissible limits or the field strength is too small to be measured.
- (2) When the test results of Peak Detected below the limits of Average Detected, the Average Detected is not need completed.
