Forward

The following information is submitted as documentation of compliance with regulations supporting Class 2 Permissible Change of Authorized Equipment. This product was authorized under Digital transmission system equipment per 47 CFR Paragraph 15.247 operating in the 2412–2462 MHz frequency band. The design was originally Granted as a module incorporating an integral antenna. The original product authorization remains intact and this report documents using the module with a Flat Patch style antenna. The patch antenna would be permanently attached to the module in a finished product. This provision will comply with the unique antenna port connector under 15.203. This Class 2 Permissible Change request documents and supports demonstration of compliance when using the associated external antenna. The product remains electrically identical as no modifications to the product were performed or required.

Name of Applicant: Cargt, Inc. 9753 Widmer Road Lenexa, KS 66215

Model: MUR1DXUFL FCC ID: 2AQ2Q-MUR1DXUFL

Opinion / Interpretation of Results

| Tests Performed | Results | |
|--------------------|----------|--|
| Radiated Emissions | Complies | |

Change to Equipment from Original Design

This request addresses use with a Flat Patch style antenna. Testing was performed using a model FXP72.07.0053A 4dBi gain antenna manufactured by Togals Antenna Solutions. The information contained in this report addresses radiated emissions measured when using the MUR1DXUFL and FXP72.07.0053A mounted on a flat panel. No modification in the transmitter circuitry was required or performed. The transmitter remains electrically identical and functionally equivalent to the original equipment authorization.

Equipment Function and Configuration

The EUT is a 2412-2462 MHz Digital Transmission System module using a 4dBi Gain antenna. The design provides operational capabilities across the 2412-2462 MHz Digital Transmissions System. The EUT provides broadband wireless connectivity to transmit and receive data. The design requires direct current power provided by the host support system. For testing purposes, the EUT was mounted on a flat supporting panel with integrated software providing testing personnel the ability to set channel and operational modes. This configuration provided operational control of the EUT. As requested by the manufacturer the equipment was tested for emissions compliance using the available configuration with the worst-case data presented. Test results in this report relate only to the products described in this report.

Application for Certification

| (1) | Manufacturer: | Cargt, Inc. |
|-----|---------------|------------------|
| | | 9753 Widmer Road |
| | | Lenexa, KS 66215 |

- (2) Identification: Model: MUR1DXUFLFCC I.D.: 2AQ2Q-MUR1DXUFL
- (3) Instruction Book:Refer to Exhibit for Instruction Manual.
- (4) Description of Circuit Functions:Refer to Exhibit of Operational Description.
- (5) Block Diagram with Frequencies:Refer to Exhibit of Operational Description.
- (6) Report of Measurements:Report of measurements follows in this Report.
- (7) Photographs: Construction, Component Placement, etc.:Refer to Exhibit for photographs of equipment.
- (8) List of Peripheral Equipment Necessary for operation. The equipment operates from direct current power supplied from the host equipment. The module provides no interface to connect tot utility AC power.
- (9) Transition Provisions of 47CFR 15.37 are not requested
- (10) Not Applicable. The unit is not a scanning receiver.
- (11) Not Applicable. The EUT does not operate in the 59 64 GHz frequency band.
- (12) The equipment is not software defined and this section is not applicable.
- (13) Applications for certification of U-NII devices in the 5.15-5.35 GHz and the 5.47-5.85 GHz bands must include a high-level operational description of the security procedures that control the radio frequency operating parameters and ensure that unauthorized modifications cannot be made. Not applicable to this filing.
- (14) Contain at least one drawing or photograph showing the test set-up for each of the required types of tests applicable to the device for which certification is requested. These drawings or photographs must show enough detail to confirm other information contained in the test report. Any photographs used must be focused originals without glare or dark spots and must clearly show the test configuration used. This information is provided in this report and Test Setup Exhibits provided with the application filing.

Applicable Standards & Test Procedures

In accordance with the Federal Communications Code of Federal Regulations, Title 47 (47CFR) dated November 20, 2018: Part 2, Subpart J, Paragraphs 2.1043, applicable parts of paragraph 15C, and KDB 178919 D01 Permissive Change Policy v06 operation in the 2400 – 2483.5 MHz Frequency band. Test procedures used are the established Methods of Measurement of Radio-Noise Emissions as described in ANSI C63.10-2013.

Equipment Testing Procedures

Radiated Emission Test Procedure

The EUT was placed on a rotating 0.9 x 1.2-meter platform, elevated as required above the ground plane at a distance of 3 meters from the FSM antenna. Radiated emissions testing was performed as required in the regulations and specified in ANSI C63.10-2013. EMI energy was maximized by equipment placement permitting orientation in three orthogonal axes, raising and lowering the FSM antenna, changing the antenna polarization, and by rotating the turntable. Each emission was maximized before data was taken and recorded. The frequency spectrum from 9 kHz to 25,000 MHz was searched for emissions during preliminary investigation. Refer to diagrams one and two showing typical test setup. Refer to photographs in the test setup exhibits for specific EUT placement during testing.

1—A LISN is optional for radiated measurements between 30 MHz and 1000 MHz but not allowed for measurements below 30 MHz and above 1000 MHz (see 6.3.1). If used, then connect EUT to one LISN. Unused LISN measuring port connectors shall be terminated in 50 Ω loads. The LISN may be placed on top of, or immediately beneath, the reference ground plane (see 6.2.2 and 6.2.3.2).

1.1—LISN spaced at least 80 cm from the nearest part of the EUT chassis.

2—Antenna can be integral or detachable, depending on the EUT (see 6.3.1).

3—Interconnecting cables that hang closer than 40 cm to the ground plane shall be folded back and forth in the center forming a bundle 30 cm to 40 cm long (see 6.3.1).

4—For emission measurements at or below 1 GHz, the table height shall be 80 cm. For emission measurements above 1 GHz, the table height shall be 1.5 m for measurements, except as otherwise specified (see 6.3.1 and 6.6.3.1).

Units of Measurements

Conducted EMIData is in dBµV; dB referenced to one microvoltRadiated EMIData is in dBµV/m; dB/m referenced to one microvolt per meterSample Calculation:

RFS = Radiated Field Strength, FSM = Field Strength Measured

A.F. = Receive antenna factor, Gain = amplification gains and/or cable losses

RFS $(dB\mu V/m @ 3m) = FSM (dB\mu V) + A.F. (dB) - Gain (dB)$

Environmental Conditions

| Ambient Temperature | 20.0° C |
|----------------------|-----------|
| Relative Humidity | 23% |
| Atmospheric Pressure | 1033.0 mb |

Statement of Modifications and Deviations

No modifications to the EUT were required during investigation for the equipment to demonstrate compliance with the 47CFR, Part 2.1043 and Part 15C requirements. There were no deviations to the specifications.

Intentional Radiators

The following information is submitted in support of demonstration of compliance with the requirements of 47CFR Parts 2 and 15C, Class 2 permissible change.

Operation in the 2400-2483.5 MHz Frequency Band

Radiated emissions were measured on the Open Area Test Site (OATS) at a three-meter distance. The production design MUR1DXUFL was mounted on a flat panel with the patch antenna during testing. Radiated emissions measurements were performed on the described configuration. Testing procedures defined in publication ANSI C63.10-2013 were used during compliance testing. The EUT was placed on a turntable elevated as required above the ground plane at a distance of 3 meters from the FSM antenna located on the OATS. The peak and quasi-peak amplitude of the frequencies below 1000 MHz were measured using a spectrum analyzer / EMC receiver. The peak and average amplitude of emissions above 1000 MHz were measured using a spectrum analyzer / EMC receiver. Emissions data was recorded from the measurement results. Data presented reflects measurement result corrected to account for measurement system gains and losses.

Other emissions present had amplitudes at least 20 dB below the limit. Peak and Quasi-Peak amplitude emissions are recorded above for frequency range of 30-1000 MHz. Peak and Average amplitude emissions are recorded above for frequency range above 1000 MHz.

Summary of Results for Transmitter Radiated Emissions of Intentional Radiator

The EUT demonstrated compliance with the radiated emissions requirements of 47CFR Part 15.247. The minimum radiated harmonic emission provided -3.8 dB margin below requirements. There were no other significantly measurable emissions in the restricted bands other than those recorded in this report. Other emissions were present with amplitudes at least 20 dB below the requirements. There were no other deviations or exceptions to the requirements.

Statement of Modifications and Deviations

No modifications to the EUT were required for the unit to demonstrate compliance with the 47CFR Part 15C paragraph 15.247 emissions requirements. There were no deviations or modifications to the specifications.

Annex A Measurement Uncertainty Calculations

The measurement uncertainty was calculated for all measurements listed in this test report according To CISPR 16–4. Result of measurement uncertainty calculations are recorded below. Component and process variability of production devices similar to those tested may result in additional deviations. The manufacturer has the sole responsibility of continued compliance.

| Measurement | Expanded Measurement Uncertainty U _(lab) |
|---|--|
| 3 Meter Horizontal 0.009-1000 MHz Measurements | 4.16 |
| 3 Meter Vertical 0.009-1000 MHz Measurements | 4.33 |
| 3 Meter Measurements 1-18 GHz | 5.14 |
| 3 Meter Measurements 18-40 GHz | 5.16 |
| 10 Meter Horizontal Measurements 0.009-1000 MHz | 4.15 |
| 10 Meter Vertical Measurements 0.009-1000 MHz | 4.32 |

Annex C Rogers Qualifications

Scot D. Rogers, Engineer

Rogers Labs, Inc.

Mr. Rogers has approximately 30 years' experience in the field of electronics. Engineering experience includes six years in the automated controls industry and remaining years working with the design, development and testing of radio communications and electronic equipment.

Positions Held

| Systems Engineer: | A/C Controls Mfg. Co., Inc. 6 Years |
|----------------------|--------------------------------------|
| Electrical Engineer: | Rogers Consulting Labs, Inc. 5 Years |
| Electrical Engineer: | Rogers Labs, Inc. Current |

Educational Background

- 1) Bachelor of Science Degree in Electrical Engineering from Kansas State University.
- 2) Bachelor of Science Degree in Business Administration Kansas State University.
- Several Specialized Training courses and seminars pertaining to Microprocessors and Software programming.
