

TEST REPORT

Test Report No. : UL-RPT-RP12447929-316A V3.0

Customer : Grundium Oy

Model No. / HMN : OCUS

FCC ID : Contains FCC ID: 2AQ5IOCUS1

ISED Certification No. : Contains IC: 24290-OCUS1

Technology : WLAN

Test Standard(s) : FCC Parts 15.205(a), 15.209(a) & 15.407(b)
ISED Canada RSS-247 6.2.1.2, 6.2.2.2 &
RSS-Gen 6.13, 8.9 & 8.10

Test Laboratory : UL VS LTD, Basingstoke, Hampshire, RG24 8AH, United Kingdom

1. This test report shall not be reproduced in full or partial, without the written approval of UL VS LTD.
2. The results in this report apply only to the sample(s) tested.
3. The sample tested is in compliance with the above standard(s).
4. The test results in this report are traceable to the national or international standards.
5. Version 3.0 supersedes all previous versions.

Date of Issue: 27 March 2019

Checked by:

1. Attestation of Test Results

1.1. Description of EUT

The equipment under test was a digital microscope scanner that contains a FCC / ISED Canada certified 2.4 GHz and 5 GHz WLAN module (FCC ID: 2AQ5IOCUS1 and IC: 24290-OCUS1).

1.2. General Information

Specification Reference:	47CFR15.407
Specification Title:	Code of Federal Regulations Volume 47 (Telecommunications): Part 15 Subpart E (Unlicensed National Information Infrastructure Devices) – Section 15.407
Specification Reference:	47CFR15.209
Specification Title:	Code of Federal Regulations Volume 47 (Telecommunications): Part 15 Subpart C (Intentional Radiators) - Section 15.209
Specification Reference:	RSS-Gen Issue 5 April 2018
Specification Title:	General Requirements for Compliance of Radio Apparatus
Specification Reference:	RSS-247 Issue 2 February 2017
Specification Title:	Digital Transmission Systems (DTSS), Frequency Hopping Systems (FHSS) and Licence-Exempt Local Area Network (LE-LAN) Devices
FCC Test Firm Registration No.:	621311
ISED Canada Site Registration No.:	3245B-2 & 3245B-3
Test Dates:	28 February 2019 to 06 March 2019

Key to Results  = Complied  = Did not comply			

Note(s):

1. The measurement was performed to assist in the calculation of the level of average emissions as the EUT employs pulsed operation.

1.4. Deviations from the Test Specification

For the measurements contained within this test report, there were no deviations from, additions to, or exclusions from the test specifications identified above.

2. Summary of Testing

2.1. Facilities and Accreditation

The test site and measurement facilities used to collect data are located at Unit 3 Horizon, Wade Road, Kingsland Business Park, Basingstoke, Hampshire, RG24 8AH, United Kingdom. The following table identifies which facilities were utilised for radiated emission measurements documented in this report. Specific facilities are also identified in the test results sections.

Site 1	X
Site 2	-
Site 17	X

UL VS LTD is accredited by UKAS. The tests reported herein have been performed in accordance with its terms of accreditation.

2.2. Methods and Procedures

Reference:	ANSI C63.10-2013
Title:	American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices
Reference:	KDB 789033 D02 General U-NII Test Procedures New Rules v02r01 December 14, 2017
Title:	Guidelines for Compliance Testing of Unlicensed National Information Infrastructure (U-NII) Devices (Part 15, Subpart E)

2.3. Calibration and Uncertainty

Measuring Instrument Calibration

In accordance with UKAS requirements all the measurement equipment is on a calibration schedule. All equipment was within the calibration period on the date of testing.

Measurement Uncertainty

No measurement or test can ever be perfect and the imperfections give rise to error of measurement in the results. Consequently the result of a measurement is only an approximation to the value measured (the specific quantity subject to measurement) and is only complete when accompanied by a statement of the uncertainty of the approximation.

The expression of uncertainty of a measurement result allows realistic comparison of results with reference values and limits given in specifications and standards.

The uncertainty of the result may need to be taken into account when interpreting the measurement results.

The reported expanded uncertainties below are based on a standard uncertainty multiplied by an appropriate coverage factor such that a confidence level of approximately 95% is maintained. For the purposes of this document "approximately" is interpreted as meaning "effectively" or "for most practical purposes".

Measurement Type	Range	Confidence Level (%)	Calculated Uncertainty
Duty Cycle	5150 MHz to 5350 MHz	95%	±1.14 %
Radiated Spurious Emissions	30 MHz to 1 GHz	95%	±4.65 dB
Radiated Spurious Emissions	1 GHz to 40 GHz	95%	±2.94 dB

The methods used to calculate the above uncertainties are in line with those recommended within the various measurement specifications. Where measurement specifications do not include guidelines for the evaluation of measurement uncertainty the published guidance of the appropriate accreditation body is followed.

2.4. Test and Measurement Equipment

Test Equipment Used for Transmitter Duty Cycle

Asset No.	Instrument	Manufacturer	Type No.	Serial No.	Date Calibration Due	Cal. Interval (Months)

3. Equipment Under Test (EUT)

3.1. Identification of Equipment Under Test (EUT)

Brand Name:	Grundium Oy
Model No. / HMN:	OCUS
Test Sample Serial Number:	MGU-00001-000035 (<i>Radiated sample</i>)
Hardware Version:	A.02.02.02
Software Version:	1.0.146
FCC ID:	Contains FCC ID: 2AQ5IOCUS1
ISED Certification Number:	Contains IC: 24290-OCUS1

3.2. Modifications Incorporated in the EUT

No modifications were applied to the EUT during testing.

3.3. Additional Information Related to Testing

Technology Tested:	WLAN (IEEE 802.11a,n,ac) / U-NII / LE-LAN	
Type of Unit:	Transceiver	
Modulation:	BPSK, QPSK, 16QAM, 64QAM & 256QAM	
Data rates:	802.11a	6, 9, 12, 18, 24, 36, 48 & 54 Mbit/s
	802.11n HT20	MCS0 to MCS7 (SISO)
	802.11n HT40	MCS0 to MCS7 (SISO)
	802.11ac VHT20	MCS0 to MCS8 (SISO)
	802.11ac VHT40	MCS0 to MCS9 (SISO)
	802.11ac VHT80	MCS0 to MCS9 (SISO)
Power Supply Requirement(s):	Nominal	12.0 VDC via 120 VAC 60 Hz adaptor

Additional Information Related to Testing (continued)

Channel Spacing:	20 MHz		
Transmit Frequency Band:	5150 MHz to 5250 MHz		
Transmit Channels Tested:	Channel ID	Channel Number	Channel Frequency (MHz)
	Bottom	36	5180
	Top	48	5240
Transmit Frequency Band:	5250 MHz to 5350 MHz		
Transmit Channels Tested:	Channel ID	Channel Number	Channel Frequency (MHz)
	Bottom	52	5260
	Top	64	5320
Channel Spacing:	40 MHz		
Transmit Frequency Band:	5150 MHz to 5250 MHz		
Transmit Channels Tested:	Channel ID	Channel Number	Channel Frequency (MHz)
	Bottom	38	5190
Transmit Frequency Band:	5250 MHz to 5350 MHz		
Transmit Channels Tested:	Channel ID	Channel Number	Channel Frequency (MHz)
	Top	62	5310
Channel Spacing:	80 MHz		
Transmit Frequency Band:	5150 MHz to 5250 MHz		
Transmit Channels Tested:	Channel ID	Channel Number	Channel Frequency (MHz)
	Single	42	5210
Transmit Frequency Band:	5250 MHz to 5350 MHz		
Transmit Channels Tested:	Channel ID	Channel Number	Channel Frequency (MHz)
	Single	58	5290

3.4. Description of Available Antennas

The EUT incorporates 2 integrated antennas.

The antenna assembly consists of a feed board and an antenna board. The EUT chassis runs between the boards and is connected to ground. 2 Pogo pins carry RF from the feed board to the antenna board through holes in the EUT chassis. The antenna board contains 2 PCB stripe antennas. Antenna 1 is used for diversity (Rx only). Antenna 2 is the transmitting antenna, and has the following maximum gain:

Manufacturer	Model	Type	Frequency Range (MHz)	Antenna Gain (dBi)
Radiantum Oy	Not stated	Dipole (Integrated)	5150 to 5350	-4.8

3.5. Description of Test Setup

Support Equipment

The following support equipment was used to exercise the EUT during testing:

Brand Name:	Lenovo
Description:	Laptop
Model Name or Number:	L480
Serial Number:	PF1EHZQQ

Brand Name:	Asus
Description:	Ethernet Router
Model Name or Number:	RT-AX88U
Serial Number:	JBIUHP000173

Brand Name:	Not Stated
Description:	Ethernet Cable. Length 2 m. Quantity 1.
Model Name or Number:	Not Stated
Serial Number:	Not Stated

Brand Name:	Maplin
Description:	USB Cable. Length 2 m. Quantity 1.
Model Name or Number:	Not Stated
Serial Number:	Not Stated

Brand Name:	Belkin
Description:	USB Hub
Model Name or Number:	F5U 404-BLK
Serial Number:	Not Stated

Brand Name:	XP Power
Description:	AC/DC Power Adapter
Model Name or Number:	AFM45US12
Serial Number:	1727-01442

Operating Modes

The EUT was tested in the following operating mode(s):

- Continuously transmitting with a modulated carrier at maximum power on bottom, middle and top channels as required using the supported data rates/modulation types.

Configuration and Peripherals

The EUT was tested in the following configuration(s):

- The customer requested the following worst case data rates to be used for all measurements:
 - o 802.11a / SISO / BPSK / 6 Mbit/s
 - o 802.11n HT20 / SISO / BPSK / MCS0
 - o 802.11n HT40 / SISO / BPSK / MCS0
 - o 802.11ac VHT80 / SISO / BPSK / MCS0
- The EUT has two separate antennas which correspond to two separate antenna ports. Port 1 and Port 2 correspond to antenna 1 and antenna 2 respectively. Only Port 2 is an active transmitter.
- Transmitter spurious emissions were performed with the EUT transmitting with a data rate of 6 Mbit/s (802.11a). This was found to be the worst case modulation scheme with regards to emissions after preliminary investigations and, as this mode emits the highest transmit output power level, it was deemed to be the worst case.
- The EUT was powered from an AC/DC power adapter connected to a 120 VAC 60 Hz single phase mains supply.
- Transmitter radiated spurious emissions tests were performed with the AC/DC power adapter connected to the EUT, and the USB and Ethernet ports terminated.
- The customer supplied instructions for controlling the device in a document titled "WLAN_TX_Commands.docx".
- For 802.11a modes, testing was performed using the power settings defined in the customer supplied document titled "Jetson_TX2_WWSafe_Power_Q_Table.pdf".
- For all other modes, testing was performed using the higher power settings provided in "WLAN_TX_Commands.docx".

Test Setup Diagrams

Radiated Tests:

Test Setup for Transmitter Radiated Emissions

Test Setup for Transmitter Radiated Emissions (continued)

4. Radiated Test Results

4.1. Transmitter Duty Cycle

Test Summary:

Test Engineer:	Mark Perry	Test Date:	02 March 2019
Test Sample Serial Number:	MGU-00001-000035		

FCC Reference:	Part 15.35(c)
ISED Canada Reference:	RSS-Gen 8.2
Test Method Used:	KDB 789033 D02 Section II.B.2.b)

Environmental Conditions:

Temperature (°C):	21
Relative Humidity (%):	40

Note(s):

1. In order to assist with the determination of the average level of fundamental and spurious emissions field strength, measurements were made of duty cycle to determine the transmission duration and the silent period time of the transmitter. The transmitter duty cycle was measured using a spectrum analyser in the time domain and calculated by using the following calculation:

$$10 \log 1 / (\text{On Time} / [\text{Period or } 100\text{ms whichever is the lesser}]).$$

$$802.11a \text{ 20MHz / SISO / 6 Mbit/s duty cycle: } 10 \log (1 / (1.4293/1.5335)) = 0.3$$

$$802.11n \text{ HT20 / SISO / MCS0 duty cycle: } 10 \log (1 / (1.3381/1.4383)) = 0.3$$

$$802.11n \text{ HT40 / SISO / MCS0 duty cycle: } 10 \log (1 / (0.6611/0.7620)) = 0.6$$

$$802.11ac \text{ VHT80 / SISO / MCS0 duty cycle: } 10 \log (1 / (0.3309/0.4327)) = 1.2$$

Transmitter Duty Cycle (continued)**Results: 802.11a / 20 MHz / SISO / 6 Mbit/s**

Pulse Duration (ms)	Period (ms)	Duty Cycle (dB)
1.4293	1.5335	0.3

**Results: 802.11n / 20 MHz / SISO / MCS0**

Pulse Duration (ms)	Period (ms)	Duty Cycle (dB)
1.3381	1.4383	0.3

Transmitter Duty Cycle (continued)**Results: 802.11n / 40 MHz / SISO / MCS0**

Pulse Duration (ms)	Period (ms)	Duty Cycle (dB)
0.6611	0.7620	0.6

**Results: 802.11ac / 80 MHz / SISO / MCS0**

Pulse Duration (ms)	Period (ms)	Duty Cycle (dB)
0.3309	0.4327	1.2

4.2. Transmitter Out of Band Radiated Emissions <1 GHz

Test Summary:

Test Engineer:	Marco Zunarelli	Test Date:	28 February 2019
Test Sample Serial Number:	MGU-00001-000035		

FCC Reference:	Parts 15.407(b)(2),(6),(7) & 15.209(a)
ISED Canada Reference:	RSS-Gen 6.13, 8.9 & RSS-247 6.2.2.2
Test Method Used:	KDB 789033 II.G. & ANSI C63.10 Sections 6.3 and 6.5
Frequency Range:	30 MHz to 1000 MHz

Environmental Conditions:

Temperature (°C):	24
Relative Humidity (%):	38

Note(s):

1. The final measured value, for the given emission in the field strength result tables, incorporates the calibrated antenna factor and cable loss.
2. Pre-scans were performed with the EUT transmitting in the band 5.25 to 5.35 GHz band with a data rate of 802.11a / SISO / 6 Mbit/s on top channel in this band as it produced the highest power spectral density and was therefore deemed worst case. An enquiry was made to the FCC and the response was pre-scans could be performed in the band with the highest power spectral density and all final measurements should be performed on any emission seen in each band.
3. The preliminary scans showed similar emission levels below 1 GHz, for each channel of operation. Therefore final radiated emissions measurements were performed with the EUT set to the top channel only.
4. All other emissions shown on the pre-scan were investigated and found to be ambient, or >20 dB below the applicable limit or below the measurement system noise floor.
5. Measurements below 1 GHz were performed in a semi-anechoic chamber (Asset Number K0017) at a distance of 3 metres. The EUT was placed at a height of 80 cm above the reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.
6. Pre-scans were performed and markers placed on the highest measured levels. The test receiver resolution bandwidth was set to 120 kHz and video bandwidth 500 kHz. The sweep time was set to auto. A peak detector was used, sweep time was set to auto and trace mode was Max Hold.
7. Final measurements were performed on the marker frequencies and the results entered into the table below. The test receiver resolution bandwidth was set to 120 kHz, using a CISPR quasi-peak detector and span wide enough to see the whole emission.

Transmitter Out of Band Radiated Emissions (5.25-5.35 GHz band operation) (continued)**Results: Quasi-Peak / Top Channel / 802.11a / SISO / BPSK / 6 Mbit/s**

Frequency (MHz)	Antenna Polarity	Level (dB μ V/m)	Limit (dB μ V/m)	Margin (dB)	Result
38.415	Vertical	24.7	40.0	15.3	Complied
53.676	Vertical	31.3	40.0	8.7	Complied
78.866	Vertical	26.2	40.0	13.8	Complied
59.214	Vertical	27.4	40.0	12.6	Complied
90.762	Vertical	25.6	43.5	17.9	Complied
256.001	Vertical	31.2	46.0	14.8	Complied

Note: These plots are pre-scans and for indication purposes only. For final measurements, see accompanying tables.

4.3. Transmitter Out of Band Radiated Emissions >1 GHz**4.3.1. 5.15-5.25 GHz band****Transmitter Out of Band Radiated Emissions (5.15-5.25 GHz band operation)****Test Summary:**

Test Engineer:	Marco Zunarelli	Test Dates:	28 February 2019 & 06 March 2019
Test Sample Serial Number:	MGU-00001-000035		

FCC Reference:	Parts 15.407(b)(1),(7) & 15.209(a)
ISED Canada Reference:	RSS-Gen 6.13, 8.9, 8.10 & RSS-247 6.2.1.2
Test Method Used:	KDB 789033 II.G. & ANSI C63.10 Sections 6.3 and 6.6
Frequency Range:	1 GHz to 40 GHz

Environmental Conditions:

Temperature (°C):	23 to 24
Relative Humidity (%):	35 to 36

Note(s):

1. FCC Part 15.407(b)(1) states for transmitters operating in the band 5.15 to 5.25 GHz: all emissions outside of the 5.15 to 5.35 GHz band will not exceed -27 dBm/MHz. Part(b)(7) states the provisions of 15.205 apply e.g. restricted bands of operation.
2. In accordance with ANSI C63.10-2013 Section 6.5.4, emissions more than 20 dB below the limit do not need to be reported.
3. Pre-scans were performed with the EUT transmitting in the band 5.25 to 5.35 GHz band with a data rate of 802.11a / SISO / 6 Mbit/s on top channel in this band as it produced the highest power spectral density and was therefore deemed worst case. An enquiry was made to the FCC and the response was pre-scans could be performed in the band with the highest power spectral density and all final measurements should be performed on any emission seen in each band.
4. All emissions shown on the pre-scan plots were investigated and found to be ambient, or >20 dB below the applicable limit or below the measurement system noise floor. Therefore the highest peak and average noise floor readings of the measuring receiver were recorded in the 5.25-5.35 GHz results section of this report.
5. Appropriate RF filters and attenuators were used during pre-scans and final measurements. Insertion losses were entered on the spectrum analyser as RF levels offsets.
6. In accordance with KDB 789033 Section II.G.1.c) if the peak measurement is below the average limit, it is not necessary to perform a separate average measurement.
7. Measurements above 1 GHz were performed in a fully anechoic chamber (Asset Number K0001) at a distance of 3 metres. The EUT was placed at a height of 1.5 metres above the reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.

Results: Top Channel / EIRP

Frequency (MHz)	Antenna Polarity	Level (dBm)	Limit (dBm)	Margin (dB)	Result
See note 4					

4.3.2. 5.25-5.35 GHz band**Transmitter Out of Band Radiated Emissions (5.25-5.35 GHz band operation)****Test Summary:**

Test Engineer:	Marco Zunarelli	Test Dates:	28 February 2019 & 06 March 2019
Test Sample Serial Number:	MGU-00001-000035		

FCC Reference:	Part 15.407(b)(2),(7) & 15.209(a)
ISED Canada Reference:	RSS-Gen 6.13, 8.9 & 8.10 / RSS-247 5.5 & 6.2.2.2
Test Method Used:	KDB 789033 II.G. & ANSI C63.10 Sections 6.3 and 6.6
Frequency Range:	1 GHz to 40 GHz

Environmental Conditions:

Temperature (°C):	23 to 24
Relative Humidity (%):	35 to 36

Note(s):

1. FCC Part 15.407(b)(2) states for transmitters operating in the band 5.15 to 5.25 GHz: all emissions outside of the 5.15 to 5.35 GHz band will not exceed -27 dBm/MHz. Part(b)(7) states the provisions of 15.205 apply e.g. restricted bands of operation.
2. In accordance with ANSI C63.10-2013 Section 6.5.4, emissions more than 20 dB below the limit do not need to be reported.
3. Pre-scans were performed with the EUT transmitting in the band 5.25 to 5.35 GHz band with a data rate of 802.11a / SISO / 6 Mbit/s on top channel in this band as it produced the highest power spectral density and was therefore deemed worst case. An enquiry was made to the FCC and the response was pre-scans could be performed in the band with the highest power spectral density and all final measurements should be performed on any emission seen in each band.
4. All emissions shown on the pre-scan plots were investigated and found to be ambient, or >20 dB below the applicable limit or below the measurement system noise floor. Therefore the highest peak and average noise floor readings of the measuring receiver were recorded in the table below.
5. The final measured value, for the given emission in the field strength result tables, incorporates the calibrated antenna factor and cable loss.
6. Appropriate RF filters and attenuators were used during pre-scans and final measurements. Insertion losses were entered on the spectrum analyser as RF levels offsets.
7. The emission shown on the 4 GHz to 6 GHz plot is the EUT fundamental.
8. Measurements were performed across the two restricted bands closest to the bands of operation with the EUT transmitting on the bottom channel in the 5.15 to 5.25 GHz band and top channel in the 5.25 to 5.35 GHz band. Plots are included in this section of the test report. Peak and average measurements were made.
9. Measurements above 1 GHz were performed in a fully anechoic chamber (Asset Number K0001) at a distance of 3 metres. The EUT was placed at a height of 1.5 metres above the reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.

Transmitter Out of Band Radiated Emissions (5.25-5.35 GHz band operation) (continued)**Results: Top Channel / Field Strength / Peak**

Frequency (MHz)	Antenna Polarity	Level (dB μ V/m)	Limit (dB μ V/m)	Margin (dB)	Result
40000.000	Vertical	59.2	74.0	14.8	Complied

Results: Top Channel / Field Strength / Average

Frequency (MHz)	Antenna Polarity	Level (dB μ V/m)	Limit (dB μ V/m)	Margin (dB)	Result
40000.000	Vertical	47.9	54.0	6.1	Complied

Transmitter Out of Band Radiated Emissions (5.25-5.35 GHz band operation) (continued)**Restricted Band 4.5 GHz to 5.15 GHz****Restricted Band 5.35 GHz to 5.46 GHz**

Transmitter Out of Band Radiated Emissions (5.25-5.35 GHz band operation) (continued)

Note: These plots are pre-scans and for indication purposes only. For final measurements, see accompanying tables.

4.4. Transmitter Band Edge Radiated Emissions

4.4.1. 5.15-5.25 GHz band

Test Summary:

Test Engineer:	Mark Perry	Test Dates:	02 March 2019 & 03 March 2019
Test Sample Serial Number:	MGU-00001-000035		

FCC Reference:	Parts 15.407(b)(1),(7), 15.205 & 15.209(a)
ISED Canada Reference:	RSS-Gen 6.13, 8.9, 8.10 & RSS-247 6.2.1.2
Test Method Used:	ANSI C63.10 Section 6.10 & KDB 789033 II.G.

Environmental Conditions:

Temperature (°C):	21 to 23
Relative Humidity (%):	38 to 40

Note(s):

1. An Inquiry was made to the FCC and the response confirmed band edge measurements need only be performed in the EUT modes that produce the highest power and the widest bandwidths. The modes that produced the highest power and widest bandwidth were:
 - o 802.11a / SISO / BPSK / 6 Mbps
 - o 802.11n HT20 / SISO / BPSK / MCS0
 - o 802.11n HT40 / SISO / BPSK / MCS0
 - o 802.11ac VHT80 / SISO / BPSK / MCS0
2. Lower band edge measurements were performed with the EUT transmitting on the bottom channel. Upper band edge measurements were performed with the EUT transmitting on the top channel.
3. For transmitters operating in the 5.15-5.25 GHz band: all emissions outside of the 5.15-5.35 GHz band shall not exceed an EIRP of -27 dBm/MHz. However, there are restricted bands of operation below the lower band edge at 4.5-5.15 GHz and also above the upper band edge at 5.35-5.46 GHz therefore the provisions of FCC Part 15.205 apply. Tests were performed in these restricted bands of operation, the results are included in the transmitter 5.25-5.35 GHz band radiated spurious emission section of this test report.
4. Field strength measurements using peak and average detectors were performed in the restricted bands below 5.15 GHz and above 5.35 GHz. Field strength and EIRP results were found to be compliant with the restricted band limits and Part 15.407 out-of-band limits.
5. For all average measurements in this section, 300 sweeps were used. This satisfies the requirement for the minimum number of sweep points, as stated in KDB 789033 Section II.G.6.c) Method AD (vi).
6. In accordance with KDB 789033 Section II.G.6.c) Method AD (vii), for average measurements, data rates where the EUT was transmitting <98% duty cycle, the duty cycle correction factor calculated in section 4.1 was added to the measured result.

Transmitter Band Edge Radiated Emissions (5.15-5.25 GHz band operation) (continued)**Results: 802.11a / 20 MHz / BPSK / 6 Mbps****Results: Lower Band Edge / Peak**
