TEST REPORT

Test report no.: 1-5794/23-01-02-B

BNetzA-CAB-02/21-102

Testing laboratory

cetecom advanced GmbH

Untertuerkheimer Strasse 6 – 10 66117 Saarbruecken / Germany Phone: + 49 681 5 98 - 0 Fax: + 49 681 5 98 - 9075 Internet: <u>https://cetecomadvanced.com</u> e-mail: mail@cetecomadvanced.com

Accredited Testing Laboratory:

The testing laboratory (area of testing) is accredited according to DIN EN ISO/IEC 17025 (2018-03) by the Deutsche Akkreditierungsstelle GmbH (DAkkS) The accreditation is valid for the scope of testing procedures as stated in the accreditation certificate starting with the registration number: D-PL-12076-01.

Applicant

Acconeer AB Västra Varvsgatan 19 211 77 Malmö / SWEDEN Phone: +46 72 5838428 Fax: Contact: Mikael Egard e-mail: Mikael.egard@acconeer.com Phone: +46 70 760 80 48

Manufacturer

Acconeer AB Västra Varvsgatan 19 211 77 Malmö / SWEDEN

Test standard/s

47 CFR Part 15

Title 47 of the Code of Federal Regulations; Chapter I; Part 15 - Radio frequency devices

For further applied test standards please refer to section 3 of this test report.

2 General information

2.1 Notes and disclaimer

The test results of this test report relate exclusively to the test item specified in this test report. cetecom advanced GmbH does not assume responsibility for any conclusions and generalizations drawn from the test results with regard to other specimens or samples of the type of the equipment represented by the test item.

The test report may only be reproduced or published in full. Reproduction or publication of extracts from the report requires the prior written approval of cetecom advanced GmbH.

The testing service provided by cetecom advanced GmbH has been rendered under the current "General Terms and Conditions for cetecom advanced GmbH".

cetecom advanced GmbH will not be liable for any loss or damage resulting from false, inaccurate, inappropriate or incomplete product information provided by the customer.

Under no circumstances does the cetecom advanced GmbH test report include any endorsement or warranty regarding the functionality, quality or performance of any other product or service provided.

Under no circumstances does the cetecom advanced GmbH test report include or imply any product or service warranties from cetecom advanced GmbH, including, without limitation, any implied warranties of merchantability, fitness for purpose, or non-infringement, all of which are expressly disclaimed by cetecom advanced GmbH.

All rights and remedies regarding vendor's products and services for which cetecom advanced GmbH has prepared this test report shall be provided by the party offering such products or services and not by cetecom advanced GmbH.

In no case this test report can be considered as a Letter of Approval.

This test report is electronically signed and valid without handwritten signature. For verification of the electronic signatures, the public keys can be requested at the testing laboratory.

4 Reporting statements of conformity – decision rule

Only the measured values related to their corresponding limits will be used to decide whether the equipment under test meets the requirements of the test standards listed in chapter 3.

The measurement uncertainty is mentioned in this test report, see chapter 9, but is not taken into account - neither to the limits nor to the measurement results. Measurement results with a smaller margin to the corresponding limits than the measurement uncertainty have a potential risk of more than 5% that the decision might be wrong."

6 Test item

6.1 General description

| Kind of test item : | Module for SRD radar 60 GHz |
|-----------------------|---|
| Type identification : | A111 Pulsed Coherent Radar module – XR112 – LH113 |
| S/N serial number : | n.a. |
| hardware version : | A111 |
| software version : | 2.8.3 |
| firmware version : | 2.8.3 |
| Frequency band : | 57 GHz – 71 GHz |
| Type of modulation : | Pulse Modulation |
| Number of channels : | 1 |
| Antenna : | 2 embedded Dipole Antennas dielectric lens LH113 |
| Power supply : | 1.71 V to 1.89 V DC |
| Auxiliary equipment : | Raspberry Pi with connector board |
| Temperature range : | -40°C to +85°C |

6.2 Additional information

The content of the following annexes is defined in the QA. It may be that not all of the listed annexes are necessary for this report, thus some values in between may be missing.

Test setup- and EUT-photos are included in test report:

1-5794/23-01-01_AnnexA 1-5794/23-01-01_AnnexB 1-5794/23-01-01_AnnexC

7 Description of the test setup

Typically, the calibrations of the test apparatus are commissioned to and performed by an accredited calibration laboratory. The calibration intervals are determined in accordance with the DIN EN ISO/IEC 17025. In addition to the external calibrations, the laboratory executes comparison measurements with other calibrated test systems or effective verifications. Weekly chamber inspections and range calibrations are performed. Where possible, RF generating and signaling equipment as well as measuring receivers and analyzers are connected to an external high-precision 10 MHz reference (GPS-based or rubidium frequency standard).

In order to simplify the identification of the equipment used at some special tests, some items of test equipment and ancillaries can be provided with an identifier or number in the equipment list below (Lab/Item).

Agenda: Kind of Calibration

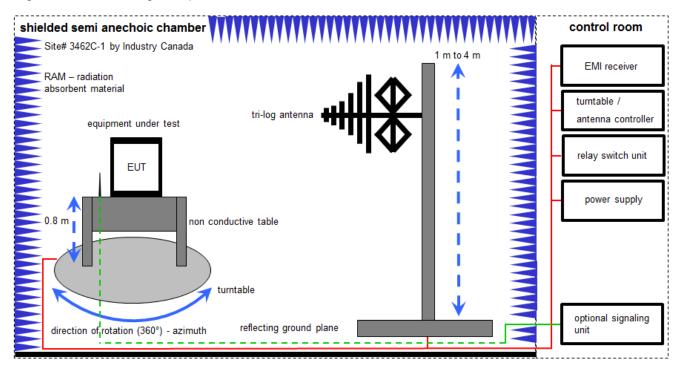

- k calibration / calibrated
- ne not required (k, ev, izw, zw not required)
- ev periodic self verification
- Ve long-term stability recognized
- vlkl! Attention: extended calibration interval
- NK! Attention: not calibrated

- EK limited calibration
- zw cyclical maintenance (external cyclical maintenance)
- izw internal cyclical maintenance
- g blocked for accredited testing
- *) next calibration ordered / currently in progress

The radiated measurements are performed in vertical and horizontal plane in the frequency range from 30 MHz to 1 GHz in semi-anechoic chambers. The EUT is positioned on a non-conductive support with a height of 0.80 m above a conductive ground plane that covers the whole chamber. The receiving antennas are conform to specifications ANSI C63. These antennas can be moved over the height range between 1.0 m and 4.0 m in order to search for maximum field strength emitted from EUT. The measurement distances between EUT and receiving antennas are indicated in the test setups for the various frequency ranges. For each measurement, the EUT is rotated in all three axes until the maximum field strength is received. The wanted and unwanted emissions are received by spectrum analyzers where the detector modes and resolution bandwidths over various frequency ranges are set according to requirement ANSI C63.

Measurement distance: tri-log antenna 10 meter EMC32 software version: 10.30.0

FS = UR + CL + AF

(FS-field strength; UR-voltage at the receiver; CL-loss of the cable; AF-antenna factor)

Example calculation:

 \overrightarrow{FS} [dBµV/m] = 12.35 [dBµV/m] + 1.90 [dB] + 16.80 [dB/m] = 31.05 [dBµV/m] (35.69 µV/m)

7.2 Shielded fully anechoic chamber

Measurement distance: horn antenna 3 meter; loop antenna 3 meter / 1 meter

FS = UR + CA + AF

(FS-field strength; UR-voltage at the receiver; CA-loss of the signal path; AF-antenna factor)

Example calculation:

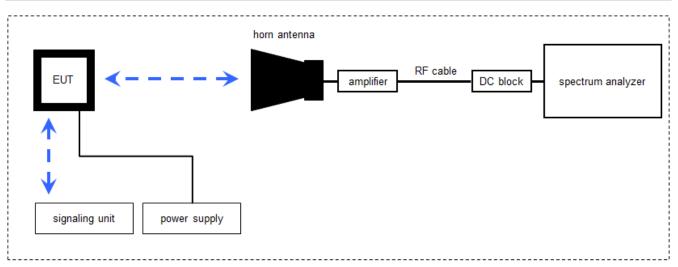

FS $[dB\mu V/m] = 40.0 [dB\mu V/m] + (-35.8) [dB] + 32.9 [dB/m] = 37.1 [dB\mu V/m] (71.61 <math>\mu V/m$)

7.3 Radiated measurements, 18 GHz – 50 GHz

7.4 Radiated measurements > 50 GHz

OP = AV + D - G

(OP-rad. output power; AV-analyzer value; D-free field attenuation of measurement distance; G-antenna gain)

 $\frac{Example \ calculation:}{OP \ [dBm] = -54.0 \ [dBm] + 64.0 \ [dB] - 20.0 \ [dBi] = -10 \ [dBm] \ (100 \ \mu W)}$

Note: conversion loss of mixer is already included in analyzer value.

7.5 Radiated measurements > 50 GHz

Note: EUT is replaced by reference source for substitution measurement

8 Sequence of testing

8.1 Sequence of testing radiated spurious 9 kHz to 30 MHz

Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- If the EUT is a tabletop system, it is placed on a table with 0.8 m height.
- If the EUT is a floor standing device, it is placed directly on the turn table.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet below the turntable.
- Measurement distance is 3 m (see ANSI C 63.4) see test details.
- EUT is set into operation.

Premeasurement*

- The turntable rotates from 0° to 315° using 45° steps.
- The antenna height is 1 m.
- At each turntable position the analyzer sweeps with positive-peak detector to find the maximum of all emissions.

Final measurement

- Identified emissions during the pre-measurement are maximized by the software by rotating the turntable from 0° to 360°.
- Loop antenna is rotated about its vertical axis for maximum response at each azimuth about the EUT. (For certain applications, the loop antenna plane may also need to be positioned horizontally at the specified distance from the EUT)
- The final measurement is done in the position (turntable and elevation) causing the highest emissions with quasi-peak (as described in ANSI C 63.4).
- Final levels, frequency, measuring time, bandwidth, turntable position, correction factor, margin to the limit and limit will be recorded. A plot with the graph of the premeasurement and the limit is stored.

*)Note: The sequence will be repeated three times with different EUT orientations.

8.2 Sequence of testing radiated spurious 30 MHz to 1 GHz

Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- If the EUT is a tabletop system, a table with 0.8 m height is used, which is placed on the ground plane.
- If the EUT is a floor standing device, it is placed on the ground plane with insulation between both.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet below the turntable.
- Measurement distance is 10 m or 3 m (see ANSI C 63.4) see test details.
- EUT is set into operation.

Premeasurement

- The turntable rotates from 0° to 315° using 45° steps.
- The antenna is polarized vertical and horizontal.
- The antenna height changes from 1 m to 3 m.
- At each turntable position, antenna polarization and height the analyzer sweeps three times in peak to find the maximum of all emissions.

- The final measurement is performed for at least six highest peaks according to the requirements of the ANSI C63.4.
- Based on antenna and turntable positions at which the peak values are measured the software maximize the peaks by changing turntable position ± 45° and antenna height between 1 and 4 m.
- The final measurement is done with quasi-peak detector (as described in ANSI C 63.4).
- Final levels, frequency, measuring time, bandwidth, antenna height, antenna polarization, turntable angle, correction factor, margin to the limit and limit are recorded. A plot with the graph of the premeasurement with marked maximum final results and the limit is stored.

8.3 Sequence of testing radiated spurious 1 GHz to 18 GHz

Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- If the EUT is a tabletop system, a 2-axis positioner with 1.5 m height is used.
- If the EUT is a floor standing device, it is placed directly on the turn table.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet below the turntable.
- Measurement distance is 3 m (see ANSI C 63.4) see test details.
- EUT is set into operation.

Premeasurement

- The turntable rotates from 0° to 315° using 45° steps.
- The antenna is polarized vertical and horizontal.
- The antenna height is 1.5 m.
- At each turntable position and antenna polarization the analyzer sweeps with positive peak detector to find the maximum of all emissions.

- The final measurement is performed for at least six highest peaks according to the requirements of the ANSI C63.4.
- Based on antenna and turntable positions at which the peak values are measured the software maximizes the peaks by rotating the turntable from 0° to 360°. This measurement is repeated for different EUT-table positions (0° to 150° in 30°-steps) and for both antenna polarizations.
- The final measurement is done in the position (turntable, EUT-table and antenna polarization) causing the highest emissions with Peak and RMS detector (as described in ANSI C 63.4).
- Final levels, frequency, measuring time, bandwidth, turntable position, EUT-table position, antenna polarization, correction factor, margin to the limit and limit are recorded. A plot with the graph of the premeasurement with marked maximum final results and the limit is stored.

8.4 Sequence of testing radiated spurious above 18 GHz

Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet.
- The measurement distance is as appropriate (e.g. 0.5 m).
- The EUT is set into operation.

Premeasurement

• The test antenna is handheld and moved carefully over the EUT to cover the EUT's whole sphere and different polarizations of the antenna.

- The final measurement is performed at the position and antenna orientation causing the highest emissions with Peak and RMS detector (as described in ANSI C 63.4).
- Final levels, frequency, measuring time, bandwidth, correction factor, margin to the limit and limit are recorded. A plot with the graph of the premeasurement and the limit is stored.

8.5 Sequence of testing radiated spurious above 50 GHz with external mixers

Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet.
- The measurement distance is as appropriate for far field (e.g. 0.25 m).
- The EUT is set into operation.

Premeasurement

- The test antenna with external mixer is handheld and moved carefully over the EUT to cover the EUT's whole sphere and different polarizations of the antenna.
- Caution is taken to reduce the possible overloading of the external mixer.

- The final measurement is performed at the position and antenna orientation causing the highest emissions with Peak and RMS detector (as described in ANSI C 63.4).
- As external mixers may generate false images care is taken to ensure that any emission measured by the spectrum analyzer does indeed originate in the EUT. Signal identification feature of spectrum analyzer is used to eliminate false mixer images (i.e., it is not the fundamental emission or a harmonic falling precisely at the measured frequency).
- Final levels, frequency, measuring time, bandwidth, correction factor, margin to the limit and limit are recorded. A plot with the graph of the premeasurement and the limit is stored.

9 Measurement uncertainty

| Test case | Uncertainty |
|---|-------------|
| Permitted range of operating frequencies | ± 100 kHz |
| Conducted unwanted emissions in the spurious domain (up to 40 GHz) | ± 1 dB |
| Radiated unwanted emissions in the spurious domain (up to 40 GHz) | ± 3 dB |
| Conducted unwanted emissions in the spurious domain (40 to 50 GHz) | ± 4 dB |
| Radiated unwanted emissions in the spurious domain (40 to 50 GHz) | ± 4 dB |
| Conducted unwanted emissions in the spurious domain (50 to 300 GHz) | ± 5 dB |
| Radiated unwanted emissions in the spurious domain (50 to 300 GHz) | ± 5 dB |
| DC and low frequency voltages | ± 3 % |
| Temperature | ± 1 °C |
| Humidity | ±3% |

10 Far field consideration for measurements above 18 GHz

Far field distance calculation:

 $D_{\rm ff} = 2 \times D^2 / \lambda$

 $\begin{array}{ll} \mbox{with} & \\ \mbox{D}_{\rm ff} & \mbox{Far field distance} \\ \mbox{D} & \mbox{Antenna dimension} \\ \mbox{\lambda} & \mbox{wavelength} \end{array}$

Spurious emission measurements:

| Antenna frequency range in GHz | Highest measured frequency in GHz | D in cm | λ in cm | D _{ff} in cm |
|--------------------------------|--------------------------------------|---------|---------|-----------------------|
| 18-26 | 26 | 3.4 | 1.15 | 20.04 |
| 26-40 | 40 | 2.2 | 0.75 | 12.91 |
| 40-50 | 50 | 2.77 | 0.60 | 25.58 |
| 50-75 | 75 | 1.85 | 0.40 | 17.11 |
| 75-110 | 110 | 1.24 | 0.27 | 11.28 |
| 110-170 | 170 | 0.85 | 0.18 | 8.19 |
| 170-220 | 220 | 0.68 | 0.14 | 6.78 |

In band measurement (EIRP, OBW):

| Treatiency | Highest measured frequency in GHz | Antenna dimension in cm | Wavelength in cm | far field distance in cm |
|------------|--------------------------------------|-------------------------|---------------------|--------------------------------|
| 50-75 | 64 | 1.85 | 0.47 | 14.6 |

11 Summary of measurement results

| No deviations from the technical specifications were ascertained | |

12 Measurement results

12.1 Occupied bandwidth

Description:

Measurement of the Bandwidth of the wanted signal.

Measurement:

| Measurement parameter | | | |
|-----------------------|----------|--|--|
| Detector: | Peak | | |
| Sweep time: | 10 s | | |
| Resolution bandwidth: | 50 MHz | | |
| Video bandwidth: | 80 MHz | | |
| Span: | 8 GHz | | |
| Trace-Mode: | Max Hold | | |

Limits:

| FCC |
|---|
| CFR Part 15.255 (c) (3) |
| The occupied bandwidth from intentional radiators operated within the specified frequency band shall comply with the following: |
| Frequency range |
| 57 GHz – 64 GHz |

Measurement results:

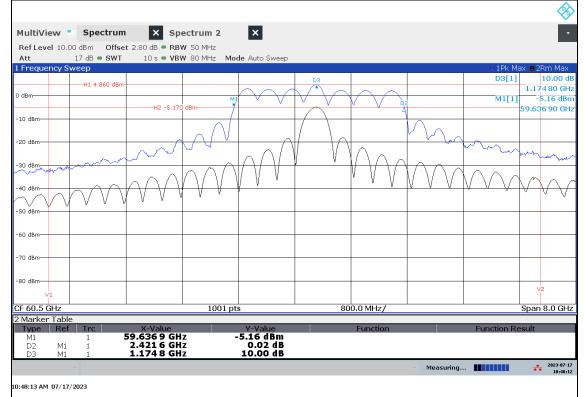

| Test condition T _{nom} / V _{nom} | F∟ in GHz | F _H in GHz | Occupied bandwidth in GHz |
|---|-----------|-----------------------|------------------------------|
| 10 dB OBW | 59.6369 | 62.0685 | 2.422 |
| 20 dB OBW | 59.4930 | 62.0265 | 2.530 |
| Measurement uncertainty | | ± span/1000 | |

Result: The measurement is passed.

Plot 1: 10 dB OBW

Plot 2: 20 dB OBW

12.2 Maximum E.I.R.P. / Transmitter Output Power

Description:

Measurement of the maximum radiated e.i.r.p. of the wanted signal.

Limits:

FCC Part 15.255

The requirements of Part 15.255 (c) (3) for pulsed field disturbance sensors are as follows:

- Pulse duration not to exceed 6 ns
- Duty factor \leq 10% within any 0.3 µs time window
- Averaged EIRP ≤ 13 dBm
- Peak ĔIRP ≤ 33 dBm
- Averaged integrated EIRP <= 5 dBm in any 0.3 µs time window within 61.5 and 64 GHz

Measurement:

| Measurement parameter | | | | |
|----------------------------------|----------|--|--|--|
| Detector: Pos-Peak (RF-Detector) | | | | |
| Video bandwidth: | 10 MHz | | | |
| Trace-Mode: | Max Hold | | | |

Measurement results:

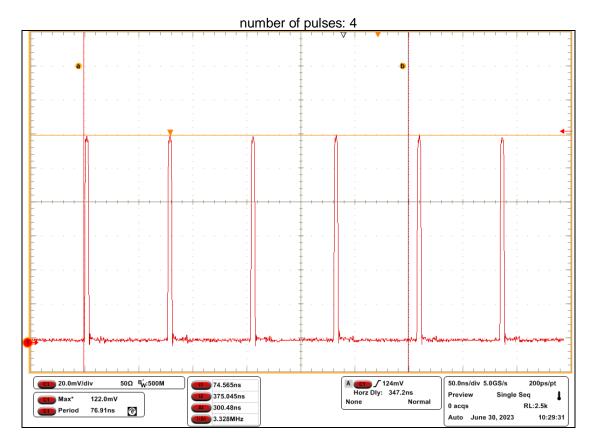

| | with Lens | without Lens | limit |
|---|-----------|--------------|--------|
| Average E.I.R.P. 10 MHz VBW | 10.7 dBm | -3.7 dBm | 13 dBm |
| Peak E.I.R.P. 10 MHz VBW | 23.9 dBm | 9.5 dBm | 33 dBm |
| Maximum Pulse duration | 4.8 ns | 4.8 ns | 6 ns |
| Duty factor within 0.3µs time window | 4.8% | 4.8% | 10% |
| Averaged integrated E.I.R.P. within 61.5 – 64 GHz within 0.3µs | -6.9 dBm | -23.69 dBm | 5 dBm |
| Measurement uncertainty | | ± 3 dB | |

<u>Result:</u> The measurement is passed.

Test report no.: 1-5794/23-01-02-B

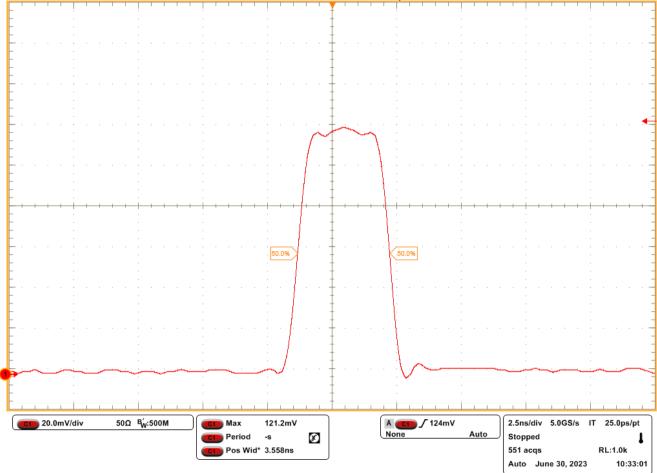

Determination of maximum number of pulses within 0.3µs:

Pulse width of one of the four pulses

Result:

pulse duration: 3.6 ns (limit: < 6 ns)

duty factor within 300 ns(0.3 µs): 4x 3.6 ns/300 ns = 4.8% (limit: 10%)

Determination of longest pulse duration:

longest pulse (4.8 ns < 6 ns) ∇ 6 a 6 A C1 / 124mV None 20.0mV/div 50Ω ^B_W:500M 50.0µs/div 5.0GS/s 200ps/pt **76.684µs** 20.0mV 2.5ns 76.7µs 76.7µs Normal Stopped Single Seq 76.688µs l 1 acqs RL:2.5M 4.8ns Max* 124.4mV Auto June 30, 2023 10:42:03 208.333MH Period 76.92ns Ø Cursor Controls Cursor Type Source Move Cursors to Center H Bars V Bars Waveform Cursor 1 Cursor 2 Screen Setup C V Ch 1 V Ch 1

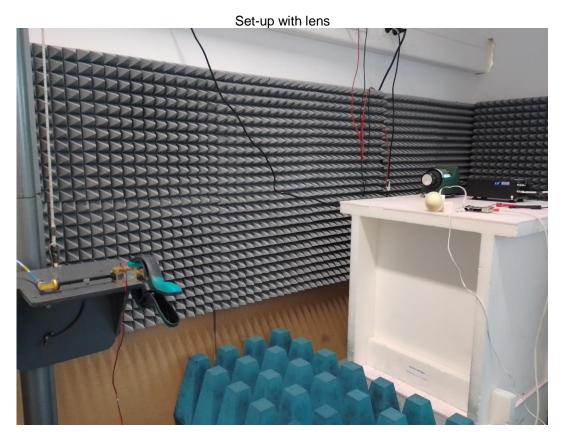

Note:

longest pulse duration: 4.8 ns (limit: < 6 ns)

duty factor within 300 ns(0.3μ s): 4.8 ns/300 ns = 1.6% (limit: 10%)

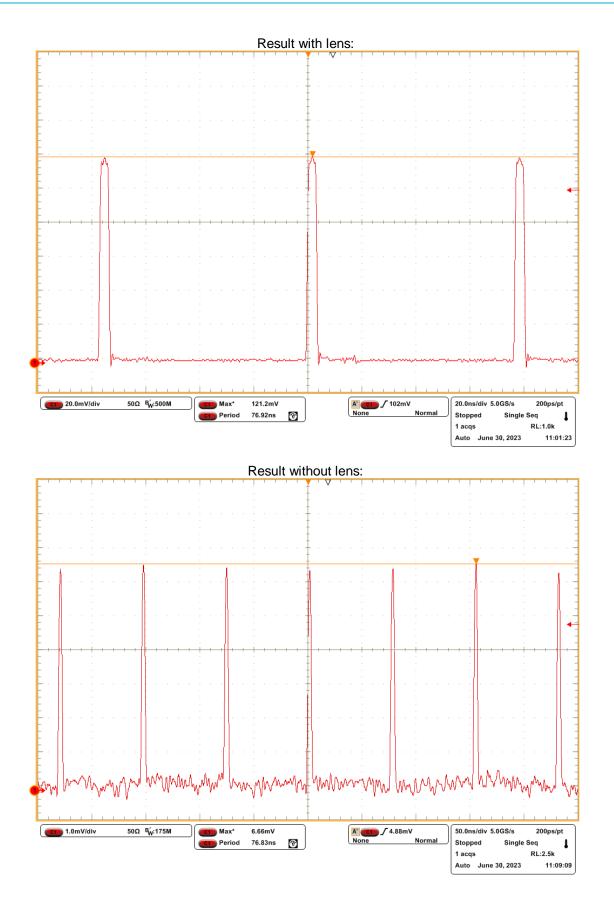

12.2.1 Radiated RF-detector and power measurement

Set-up without lens

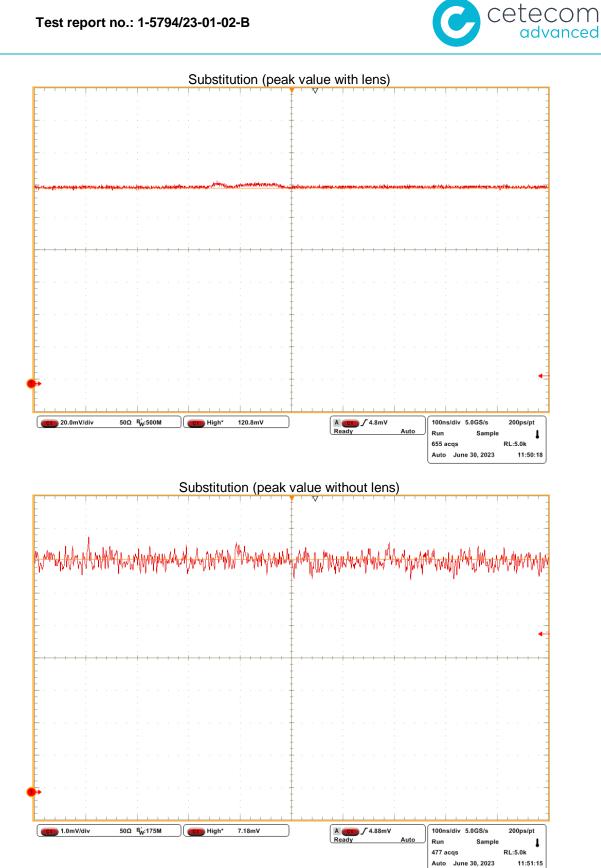

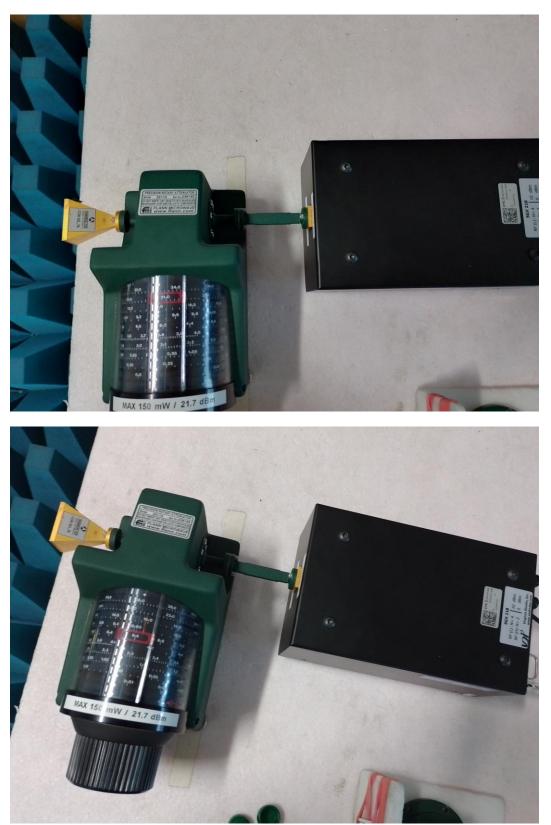

Replacement of EUT by reference source:

Attenuation of rotary attenuator to align voltage levels at oscilloscope:

EIRP substitution measurement for determining average EIRP:

| Measurement: | with Lens | Note: |
|--|-----------|---|
| | | |
| Readout average (mean) value of oscilloscope at 1 m with EUT | 121 mV | |
| EIRP of reference source at 1 m | 40.5 dBm | Multiplier: ~20 dB; Horn 20.4 dBi Readout value of power sensor adjusted by far field attenuation |
| fix attenuation added | -10 dB | |
| rotary attenuator setting to reach peak voltage value of EUT with detector | -6.6 dB | adjusted to oscilloscope readout value of EUT |
| Peak EIRP of EUT | 23.9 dBm | |
| Average EIRP of EUT within 0.3µs | 10.7 dBm | 4.8 % duty cycle within 0.3µs |

| | without Lens | Note: |
|--|--------------|---|
| Readout average (mean) value of oscilloscope at 1 m with EUT | 7 mV | |
| EIRP of reference source at 1 m | 40.5 dBm | Multiplier: ~20 dB; Horn 20.4 dBi Readout value of power sensor adjusted by far field attenuation |
| fix attenuation added | -10 dB | |
| rotary attenuator setting to reach peak voltage value of EUT with detector | -21 dB | adjusted to oscilloscope readout value of EUT |
| Peak EIRP of EUT | 9.5 dBm | |
| Average EIRP of EUT within 0.3µs | -3.7 dBm | 4.8 % duty cycle within 0.3µs |

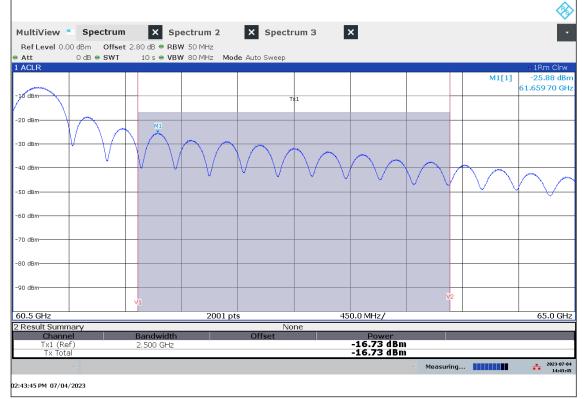

Plot 4: Channel power within 57 to 64 GHz without lens

Plot 5: Channel power within 61.5 to 64 GHz with lens

Plot 6: Channel power within 61.5 to 64 GHz without lens

Calculation of Averaged integrated EIRP within 61.5 – 64 GHz and within 0.3µs:

| Measurement: | with Lens | Note: |
|----------------------------------|------------|---------------------------|
| | | |
| Channel power full band | 0.87 dBm | |
| Channel power 61.5 – 64 GHz | -16.73 dBm | |
| Difference | 17.6 dBm | |
| Average EIRP of EUT within 0.3µs | 10.7 dBm | from detector measurement |
| Average EIRP of EUT within 0.3µs | -6.9 dBm | Limit: 5 dBm |
| and within 61.5 – 64 GHz | | |

| Measurement: | without Lens | Note: | |
|----------------------------------|--------------|---------------------------|--|
| | | | |
| Channel power full band | -7.54 dBm | | |
| Channel power 61.5 – 64 GHz | -27.53 dBm | | |
| Difference | 19.99 dBm | | |
| Average EIRP of EUT within 0.3µs | -3.7 dBm | from detector measurement | |
| Average EIRP of EUT within 0.3µs | -23.69 dBm | -23.69 dBm Limit: 5 dBm | |
| and within 61.5 – 64 GHz | | | |

12.3 Spurious emissions radiated

Description:

Measurement of the radiated spurious emissions in transmit mode.

Limits:

FCC Part 15.255

- (c) Limits on spurious emissions:
- (1) The power density of any emissions outside the 57-71 GHz band shall consist solely of spurious emissions.
- (2) Radiated emissions below 40 GHz shall not exceed the general limits in §15.209.
- (3) Between 40 GHz and 200 GHz, the level of these emissions shall not exceed 90 pW/cm² (-10dBm) at a distance of 3 meters.
- (4) The levels of the spurious emissions shall not exceed the level of the fundamental emission.

| | FCC | | | | | | |
|-----------------------------|-------------------------|----------------------|--|--|--|--|--|
| CFR Part 15.209(a) | | | | | | | |
| Radiated Spurious Emissions | | | | | | | |
| Frequency (MHz) | Field Strength (dBµV/m) | Measurement distance | | | | | |
| 0.009 – 0.490 | 2400/F(kHz) | 300 | | | | | |
| 0.490 – 1.705 | 24000/F(kHz) | 30 | | | | | |
| 1.705 – 30.0 | 30 | 30 | | | | | |
| 30 88 | 30.0 | 10 | | | | | |
| 88 – 216 | 33.5 | 10 | | | | | |
| 216 – 960 | 36.0 | 10 | | | | | |
| Above 960 | 54.0 | 3 | | | | | |

Limit conversion (ANSI C63.10-2013 9.6):

 $\mathsf{EIRP}[\mathsf{dBm}] = 10 \times \log(4 \times \pi \times d^2 \times \mathsf{PD}[\mathsf{W}/\mathsf{m}^2])$

- Power density at the distance specified by the limit: PD [W/m²]
- Equivalent isotropically radiated power: EIRP [dBm]
- Distance at which the power density limit is specified: d [m]

According to this formula, an emission limit of PD = 90 pW/cm² at a distance of d = 3 m corresponds to an equivalent isotropically radiated power of EIRP = -10 dBm.

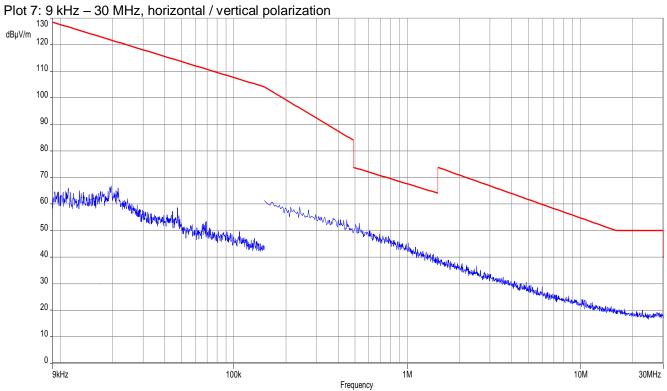

Measurement:

| Measurement parameter | | | | |
|-----------------------|--|--|--|--|
| Detector: | Quasi Peak / Pos-Peak / RMS | | | |
| Resolution bandwidth: | F < 1 GHz: 100 kHz F > 1 GHz: 1 MHz | | | |
| Video bandwidth: | F < 1 GHz: 300 kHz F > 1 GHz: 3 MHz | | | |
| Trace-Mode: | Max Hold | | | |

Measurement results:

| Frequency [GHz] | Detector | Bandwidth [MHz] | Level | Limit | Margin [dB] | | |
|---|----------|--------------------|-------|-------|----------------|--|--|
| No peaks detected! | | | | | | | |
| Please refer to the following plots for more information on the level of spurious emissions | | | | | | | |

Result: The measurement is passed.

12.4 Frequency Stability

Description:

Measurement of the radiated spurious emissions in transmit mode.

Limits:

(e) *Frequency stability.* Fundamental emissions must be contained within the frequency bands specified in this section during all conditions of operation. Equipment is presumed to operate over the temperature range -20 to + 50 degrees Celsius with an input voltage variation of 85% to 115% of rated input voltage, unless justification is presented to demonstrate otherwise.

| FCC |
|---|
| CFR Part 15.255 |
| The occupied bandwidth from intentional radiators operated within the specified frequency band shall comply with the following: |
| Frequency range |
| 57 GHz – 64 GHz |

Measurement:

| Measurement parameter | | | |
|-----------------------|-----------------|--|--|
| Detector: | Peak | | |
| Sweep time: | 10 s | | |
| Resolution bandwidth: | 50 MHz | | |
| Video bandwidth: | 80 MHz | | |
| Span: | 8 GHz | | |
| Trace-Mode: | Max Hold | | |
| Temperature: | -40 °C / +85 °C | | |

Measurement Results:

| Temperature in °C | Voltage | f∟ in GHz | f _H in GHz |
|----------------------|---------|-----------|-----------------------|
| -40 | Vnom | 59.709 | 62.282 |
| -20 | Vnom | 59.677 | 62.242 |
| -10 | Vnom | 59.637 | 62.202 |
| 0 | Vnom | 59.612 | 62.186 |
| 10 | Vnom | 59.589 | 62.154 |
| 20 | Vnom | 59.557 | 62.130 |
| 30 | Vnom | 59.557 | 62.106 |
| 40 | Vnom | 59.541 | 62.082 |
| 50 | Vnom | 59.533 | 62.066 |
| 85 | Vnom | 59.509 | 62.034 |

Voltage variation

| Voltage variation of rated input voltage | f∟ in GHz | f _H in GHz | | |
|---|---|-----------------------|--|--|
| < 85 % of U | Voltage variation does not affect the radiated signal | | | |
| > 115 % of U | | | | |

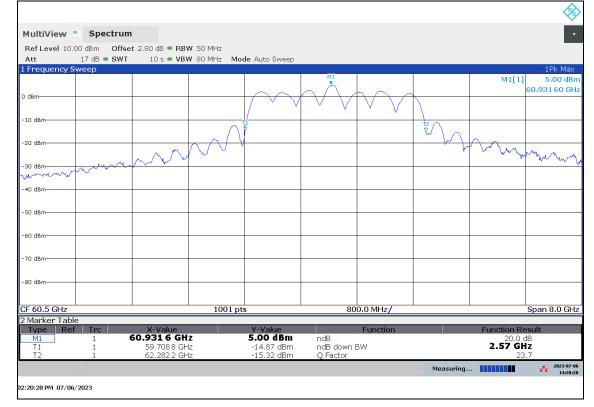

Note: The control board only allows a voltage variation of +/-5 %

<u>Result:</u> The measurement is passed.
