Aug 5, 2022

Dear Reader,

The Parsyl Passport (Model PPA1) design contains a WiFi and Classic Bluetooth enabled module. That module is made by EspressIf Systems and has part number ESP32-WROOM-32E with FCC ID 2AC7Z-ESP32WROOM32E.

The Parsyl Passport, as designed, leverages a Nordic Semiconductor nRF52840 Bluetooth SoC as the primary and only bluetooth subsystem within the product. The Bluetooth components within the ESP32-WROOM-32E module are disabled and will never be used in the end product.

As such, we Parsyl, Inc., formally attest that the Classic Bluetooth functionality within the ESP32-WROOM-32E module (FCC ID 2AC7Z-ESP32WROOM32E) is locked out and will not be used.

Best regards,

Murat Erdoğan
