

MODEL DESCRIPTION AND DIFFERENCE

The model of AM antenna series
Description

There are two models of CA79 series AM antennas: CA79L (CA79L/F2, Vista Classic) and CA79X (CA79X/F2, Vista Grand). The names in the brackets are different designations for same antenna model. The difference between CA79L and CA79X is the size of antenna panels. CA79X is the main test model.

We, Beijing CSS Technologies Development Co., Ltd. Hangzhou Branch, hereby declare that that the layout of PCB in the CA79 series are same, all electronics in the AM detection systems are exactly the same. The difference is only the coil gain, because of the structures and sizes of antenna panels are different.

We will responsible for any consequences caused by other differences in the AM detection systems.
