Application Examiner

**RE: Gemalto Document Reader Model Differences**

**Applicant: Gemalto, Inc.**

**FCC ID: 2AQL3PR01523**

**To Whom it may Concern:**

This letter is to summarize the differences between Gemalto document reader models PV70-02-00-00-01 and PV75-02-00-00-01.

**PV70-02-00-00-01      Marketing name: Gemalto Document Reader AT10K**

**PV75-02-00-00-01      Marketing name: Gemalto OEM Document Reader AT10K**

The above document reader models are, from an electronic standpoint, identical, with only external mechanical differences to address different markets. Model PV70-02-00-00-01 is designed to be used on the customer's desktop, and incorporates an external plastic shell with rounded edges and Gemalto-branded graphics. PV75-02-00-00-01 is an OEM version of the product in which the external cosmetic plastic parts are removed, leaving a plain rectangular enclosure designed to be incorporated into the customer's end product, for example, a self-service kiosk.

Both document reader models incorporate the same printed circuit assemblies, including the same radio, arranged and interconnected identically. In addition, both reader models incorporate the same operating firmware. Because the only difference between the two reader models is in their external mechanical appearance, it is my professional opinion that both models are equivalent in terms of their electromagnetic compatibility.

If you have any questions or comments, please do not hesitate to contact me.

Sincerely,

A handwritten signature in cursive script, reading "Stephen P. Bernard".
