1. General Product Information

1.1.EUT description

Test item description:	LED table lamp		
Model/Type reference:	W20		
Sample Number	TCT220221E039-0101		
Operation Frequency:	127.08kHz-176.12kHz	$\langle \mathcal{O} \rangle$	
Modulation Technology:	Load modulation		
Antenna Type:	Inductive loop coil Antenna		
Rating(s):	Adapter Information: Model: K48V240200U Input: AC 100-240V, 50/60Hz, 1.2A Max Output: DC 24.0V, 2.0A		

Note: The antenna gain listed in this report is provided by applicant, and the test laboratory is not responsible for this parameter.

2. Test Result Summary

Requirement	CFR	47 Section		Result		
Antenna requirement	§	15.203	PASS			
AC Power Line Conducte Emission	ed §	15.207		PASS		
Spurious Emission	§15	.209(a)(f)		PASS		
lote: 1. PASS: Test item meets the re 2. Fail: Test item does not meet						
3. N/A: Test case does not apply						
4. The test result judgment is de	cided by the limit of test :	standard.

3. General Information

3.1. Test environment and mode

Operating Environment:

opolating Environmont.		
Condition	Conducted Emission	Radiated Emission
Temperature:	25 °C	25.1 °C
Humidity:	55 % RH	50 % RH
Atmospheric Pressure:	1010 mbar	1010 mbar
Test Meder	•	

Test Mode:

Engineering mode:	Wireless charger output MA	V lood 5\// mode
Engineening mode.		Λ load SVV mode.
3		

The sample was placed 0.8m for the measurement below above the ground plane of 3m chamber. Measurements in both horizontal and vertical polarities were performed. During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X, Y & Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables, rotating the turntable, varying antenna height from 1m to 4m in both horizontal and vertical polarizations. The emissions worst-case(Z axis) are shown in Test Results of the following pages.

3.2. Description of Support Units

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

T	Equipment	Model No.	Serial No.	FCC ID	Trade Name
ſ	Mobile Phone	SM-G9350	R28HA2ER3GT	/	SAMSUNG

Note:

1. All the equipment/cables were placed in the worst-case configuration to maximize the emission during the test.

- 2. Grounding was established in accordance with the manufacturer's requirements and conditions for the intended
 - use.

4. Facilities and Accreditations

4.1. Facilities

The test facility is recognized, certified, or accredited by the following organizations:

• FCC - Registration No.: 645098

SHENZHEN TONGCE TESTING LAB

Designation Number: CN1205

The testing lab has been registered and fully described in a report with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files.

IC - Registration No.: 10668A-1

SHENZHEN TONGCE TESTING LAB CAB identifier: CN0031

The testing lab has been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing.

4.2. Location

SHENZHEN TONGCE TESTING LAB

Address: TCT Testing Industrial Park Fuqiao 5th Industrial Zone, Fuhai Street, Bao'an District Shenzhen, Guangdong, 518103, People's Republic of China

TEL: +86-755-27673339

4.3. Measurement Uncertainty

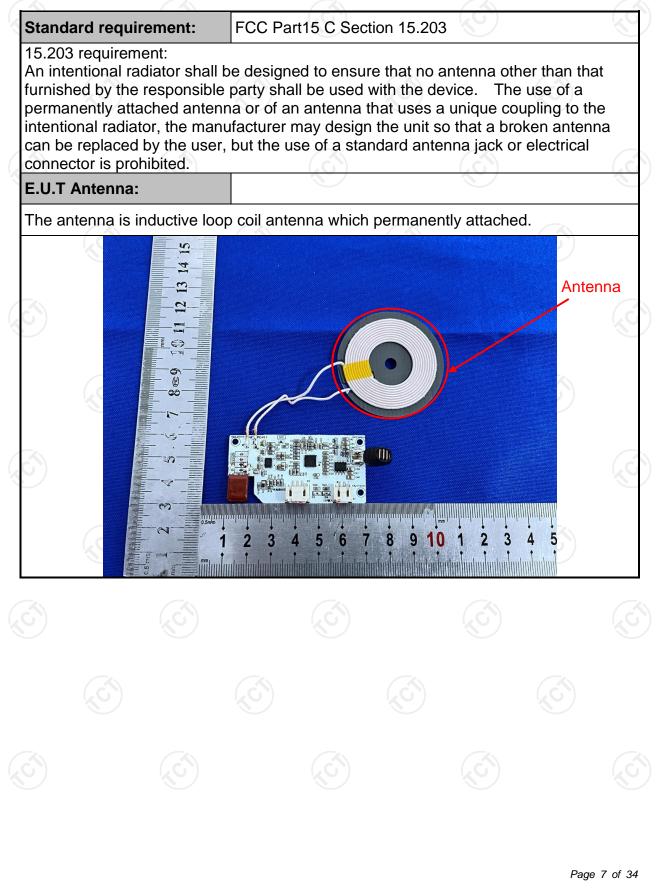

The reported uncertainty of measurement $y \pm U$, where expended uncertainty U is based on a standard uncertainty multiplied by a coverage factor of k=2, providing a level of confidence of approximately 95 %.

No.	Item	MU
1	Conducted Emission	± 3.10 dB
2	RF power, conducted	± 0.12 dB
3	Spurious emissions, conducted	± 0.11 dB
4	All emissions, radiated(<1 GHz)	± 4.56 dB
5	All emissions, radiated(1 GHz - 18 GHz)	🕙 ± 4.22 dB
6	All emissions, radiated(18 GHz- 40 GHz)	± 4.36 dB

5. Test Results and Measurement Data

5.1. Antenna requirement

5.2. Conducted Emission

5.2.1. Test Specification

 Test Procedure: impedance stabilization network (L.I.S.N.). The provides a 500hm/50uH coupling impedance for the measuring equipment. The peripheral devices are also connected to the material power through a LISN that provides a 500hm/50u coupling impedance with 500hm termination. (Please refer to the block diagram of the test setup are photographs). Both sides of A.C. line are checked for maximum emission, the relative positions of equipment and all of the test setup. 	.z.i. rest specification

ГСТ 通测检测 TESTING CENTRE TECHNOLOGY	Report No.: TCT220221E039
	 measurement antenna elevation shall be that which maximizes the emissions. The measurement antenna elevation for maximum emissions shall be restricted to a range of heights of from 1 m to 4 m above the ground or reference ground plane. 2. Corrected Reading: Antenna Factor + Cable Loss + Read Level - Preamp Factor = Level 3. For measurement below 1GHz, If the emission level of the EUT measured by the peak detector is 3 dB lower than the applicable limit, the peak emission level will be reported. Otherwise, the emission
	 measurement will be repeated using the quasi-peak detector and reported. 4. Use the following spectrum analyzer settings: (1) Span shall wide enough to fully capture the emission being measured;
	 (2) Set RBW=120 kHz for f < 1 GHz; VBW ≥RBW; Sweep = auto; Detector function = peak; Trace = max hold; (3) Set RBW = 1 MHz, VBW= 3MHz for f □ 1 GHz for peak measurement.
	For average measurement: VBW = 10 Hz, when duty cycle is no less than 98 percent. VBW \geq 1/T, when duty cycle is less than 98 percent where T is the minimum transmission duration over which the transmitter is on and is transmitting at its maximum power control level for the tested mode of operation.
Test mode:	Refer to section 3.1 for details
Test results:	PASS (C) (C)
