

SAR evaluation

MPE Calculation Method

$$E \text{ (V/m)} = (30 * P * G)^{0.5} / d$$

$$\text{Power Density: } Pd \text{ (W/m}^2\text{)} = E^2 / 377$$

E = Electric Field (V/m)

P = Peak RF output Power (W)

G = EUT Antenna numeric gain (numeric)

d = Separation distance between radiator and human body (m)

The formula can be changed to

$$Pd = (30 * P * G) / (377 * d^2)$$

From the peak EUT RF output power, the minimum mobile separation distance, d=0.2m, as well

as the gain of the used antenna, the RF power density can be obtained.

Calculated Result and Limit (WORSE CASE IS AS BELOW)

| Directional Antenna Gain (Numeric) | Peak Output Power (mW) | Power Density (S)(mW/cm ²) | Limit of Power Density (S) (mW/cm ²) | Test Result |
|------------------------------------|------------------------|--|--|-------------|
| 1.3 (1.12dBi) | 3.65 (5.62dBm) | 0.00094 | 1 | Complies |
