TO WHOM IT MAY CONCERN

ATTESTATION:

I attest that the product, model BT21 WIRELESS CHARGER (FCC ID: 2AQTS-LINEBT21WC), has a USB port only for the power supply purpose; and that the USB port cannot be used by the End-User for data exchange as a computer peripheral device.

The USB port is not a port for the data exchange.

As see in the circuit diagram's, D-, D+ terminals of the USB port have the following functions:  
When wireless charging power is supplied, signal detection of DC 9 V was sent to the IC of input power via D-1, D+1, D-2, D+2. In this case, high-speed charging is operated. If DC 9 V was not recognized at the input terminals, wireless charging power was worked by DC 5V.

Sincerely,

*JaeHong Noh*
