General Description

Low-power Wi-Fi 802.11bgn SiP transceiver radio module, targeted to, but not limited to, operate with a Linux-based host system as a network co-processor for connectivity to WLANs.

Module has two RF pins. End-product manufacturer can decide to connect external antenna to RF1 and/or RF2. The unused RF port should be 50Ω terminated. Reason for connecting both external antennas would be to implement the supported switched diversity. There is no MIMO functionality, and there is never simultaneous transmission out of the antennas, since an internal switch redirects the RF signal to either RF1 or RF2, where RF2 has ~1dB less TX power compared to RF1.

Only the A-variant, WFM200SA, has the integral antenna assembled, so a customer might want to use it, instead of an external antenna, by shorting the RF1 pin with the adjacent ANT_IN pin using a 0Ω resistor.

Modifications Incorporated in the EUT

No modifications were applied to the EUTs during testing.

Samples

Two samples were used in the testing. During the tests the EUT was set to transmit continuously and was set to the channel under test. Normal test modulation and maximum transmit power was used in all tests. No modifications were done during the tests. Each antenna and RF I/O port were tested individually.

**FCC Rule: 15.247(b)(3)
 RSS-247 5.4(d)**

For systems using digital modulation in the 2400-2483.5 MHz bands the limit is 1 Watt. As an alternative to a peak power measurement, compliance with the one watt limit can be based on a measurement of the maximum conducted output power. Gated RMS power was measured with Rohde & Schwarz TS8997 test system. Following measurement method was used, AVGPM-G (C11.9.2.3.2), ANSI 63.10
 Pre-measurements were performed to RF I/O port 1 and RF I/O port 2, the worst-case test results have been reported.

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power. In addition, radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a).

Measurement distance was 3 meters during the tests.

The correction factor in the final result table contains the sum of the transducers (antenna + amplifier + cables).

Peak values of emissions below 1000 MHz measured for reference as well as transmitter fundamental.

The pre measurements were performed with the EUT being in three orthogonal positions (X, Y, Z). Final measurements were done in worst position.

Radiated spurious emissions measurements were tested with 1Mbps data rate.

Transmitter Band Edge Measurement and Conducted Spurious Emissions

Standard: ANSI C63.10 (2013)
Tested by: JAT
Date: 8 - 12 August 2019
Temperature: 23 ± 3 °C
Humidity: 20 - 60 % RH
Measurement uncertainty: ± 2.87 dB Level of confidence 95 % (k = 2)

FCC Rule: 15.247(d), 15.209(a)

RSS-247 5.5

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in Section 15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a) (see Section 15.205(c)).
