2.1 TEST STANDARDS

The limit for Maximum Permissible Exposure (MPE) specified in KDB 447498 D01 General RF Exposure Guidance v06 is followed. The gain of the antennas used in the product is extracted from the Antenna data sheets provided and also the maximum total power input to the antenna is measured. Through the Friis transmission formula and the maximum gain of the antenna, we can calculate the distance, away from the product, where the limit of MPE is reached. Although the Friis Transmission formula is far field assumption, the calculated result of that is an over-prediction for near field power density. It is taken as worst case to specify the safety range.

2.2 LIMIT

Approximate SAR Test Exclusion Power Thresholds at Selected Frequencies and Test Separation Distances are illustrated in the following Table.

The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances \leq 50 mm are determined by:

Page 7 of 8

[(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)] • $[\sqrt{f}(GHz)] \le 3.0$ for 1-g SAR and ≤ 7.5 for 10-g extremity SAR,where f(GHz) is the RF channel transmit frequency in GHz.

Power and distance are rounded to the nearest mW and mm before calculation

The result is rounded to one decimal place for comparison

The test exclusions are applicable only when the minimum test separation distance is \leq 50 mm and for transmission frequencies between 100 MHz and 6 GHz. When the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine SAR test exclusion.

2.3 TEST RESULT

Maximum measured transmitter power.

BLE The Worst Case

Mode	frequency	Maximum AV Output Power	aximum AV Output Power Tune up tolerance	
mode	GHz	dBm	dBm	dBm
GFSK	2.402	2.23	2±1	3

Remark: The worst case gain of the antenna is 1.5dBi.

1.5dBi logarithmic terms convert to numeric result is nearly 1.413.

Maximum Tune up Power₍₂₄₀₂₎= 1.995mW

[(GFSK power of channel, including tune-up tolerance, mW)/(min. test separation distance,mm)] $\cdot \left[\sqrt{f(GHz)}\right] = 1.995/5^*\sqrt{2.402} = 0.618 \le 3.0$

Threshold at which no SAR required is $0.618 \le 3.0$ for 1-g SAR, Separation distance ≤ 5 mm.
