Regarding: US Coast Guard Notification Requirement

As an exclusively designed radar transponder (RACON), this device is intended for installation at fixed locations to mark maritime navigational hazards by responding to signals from a passing ships radar.

RACONs are not subject to USCG notification prior to FCC authorization.

USCG notification is required for other technology (AIS-SART, VDSMS, EPIRB) as specified in FCC R&O 16-119. This is generally VHF/UHF radio devices using maritime radio channels for active navigation. Such devices are used on board ships or are for search and rescue locators.
