

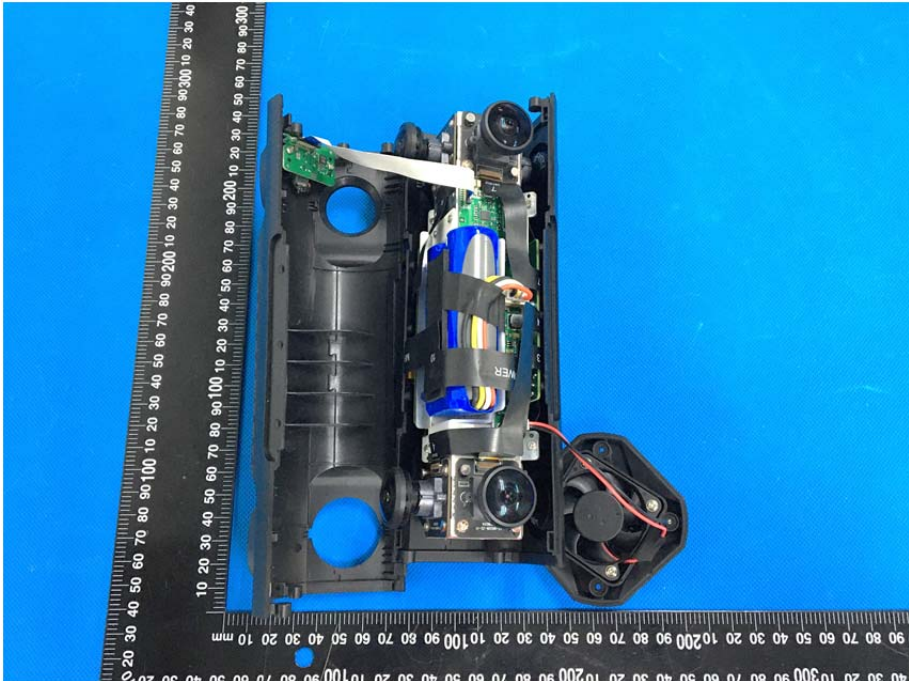

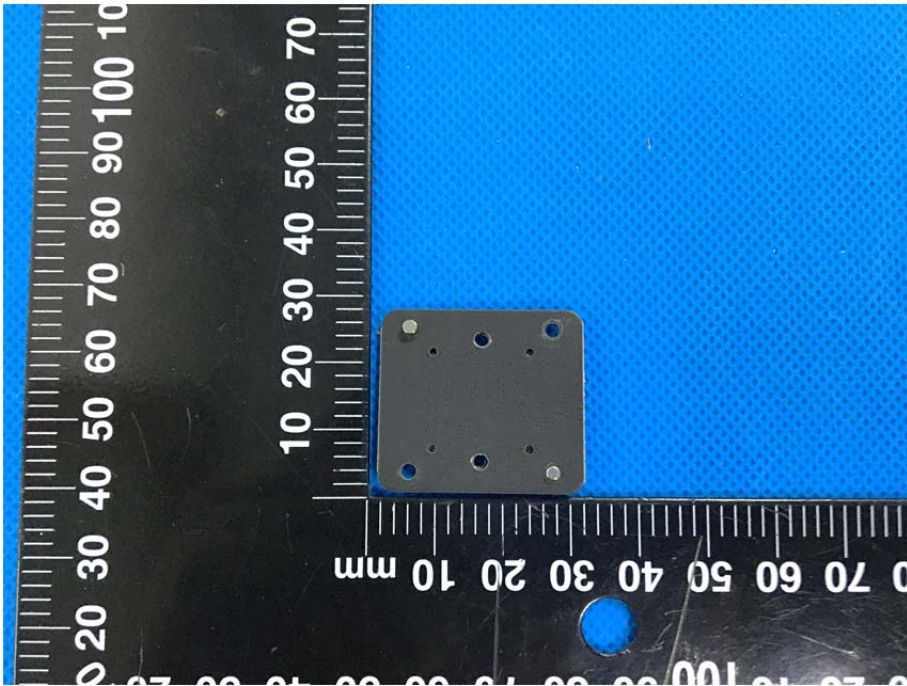

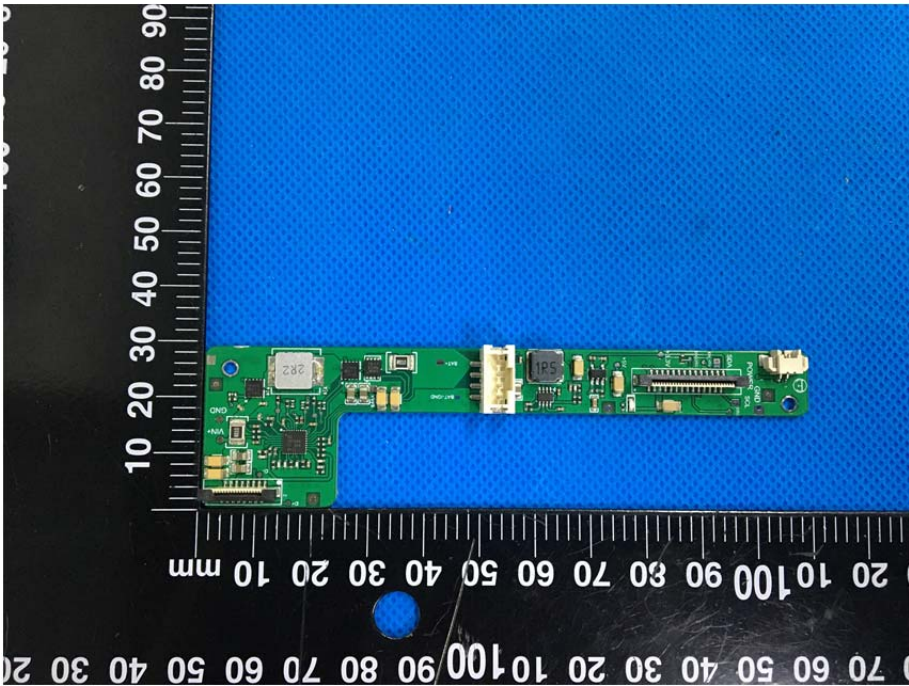

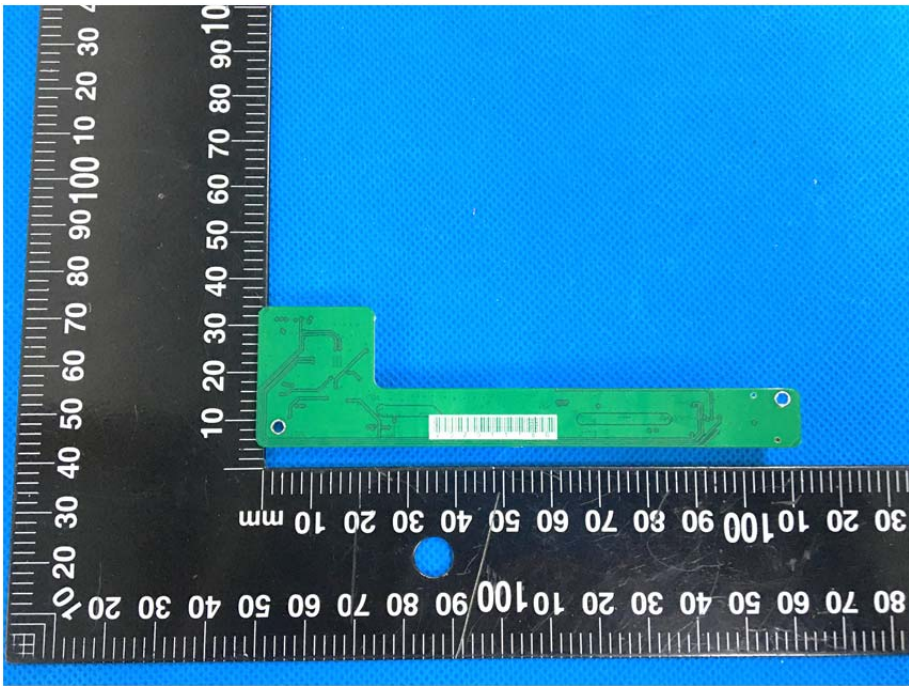

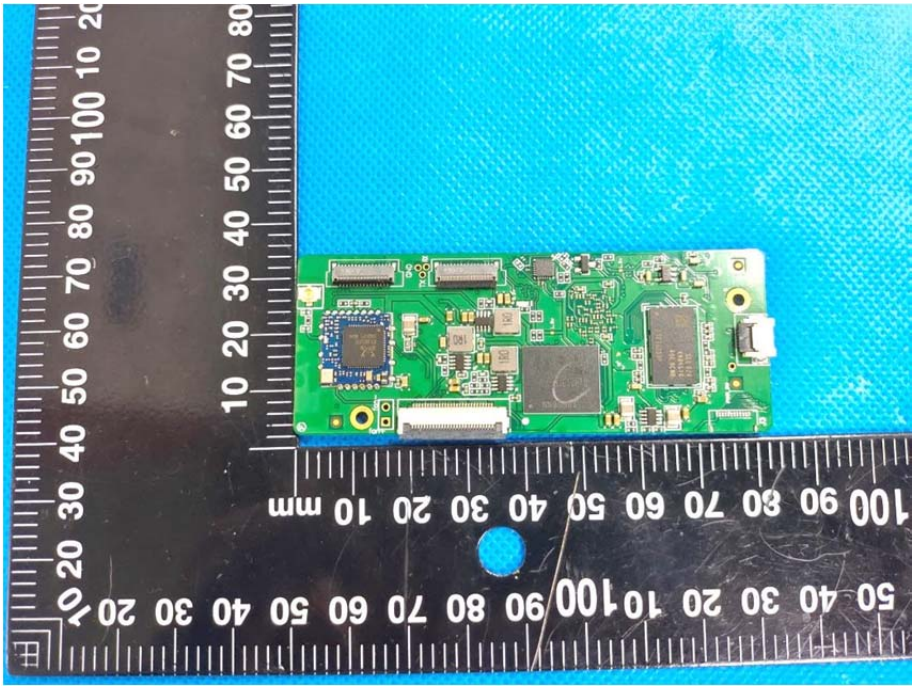

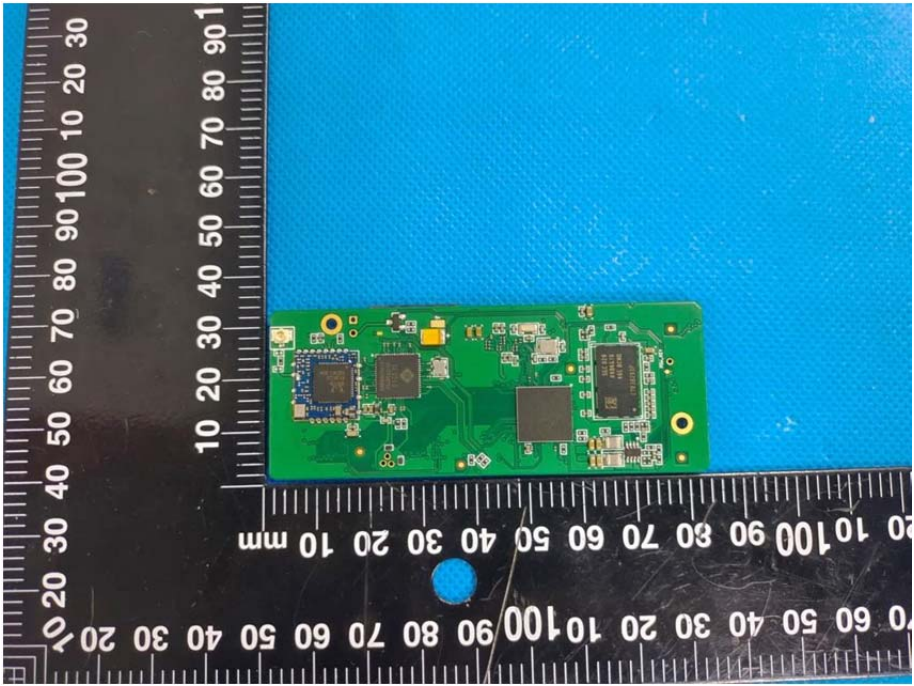

EXHIBIT 3 - EUT INTERNAL PHOTOGRAPHS

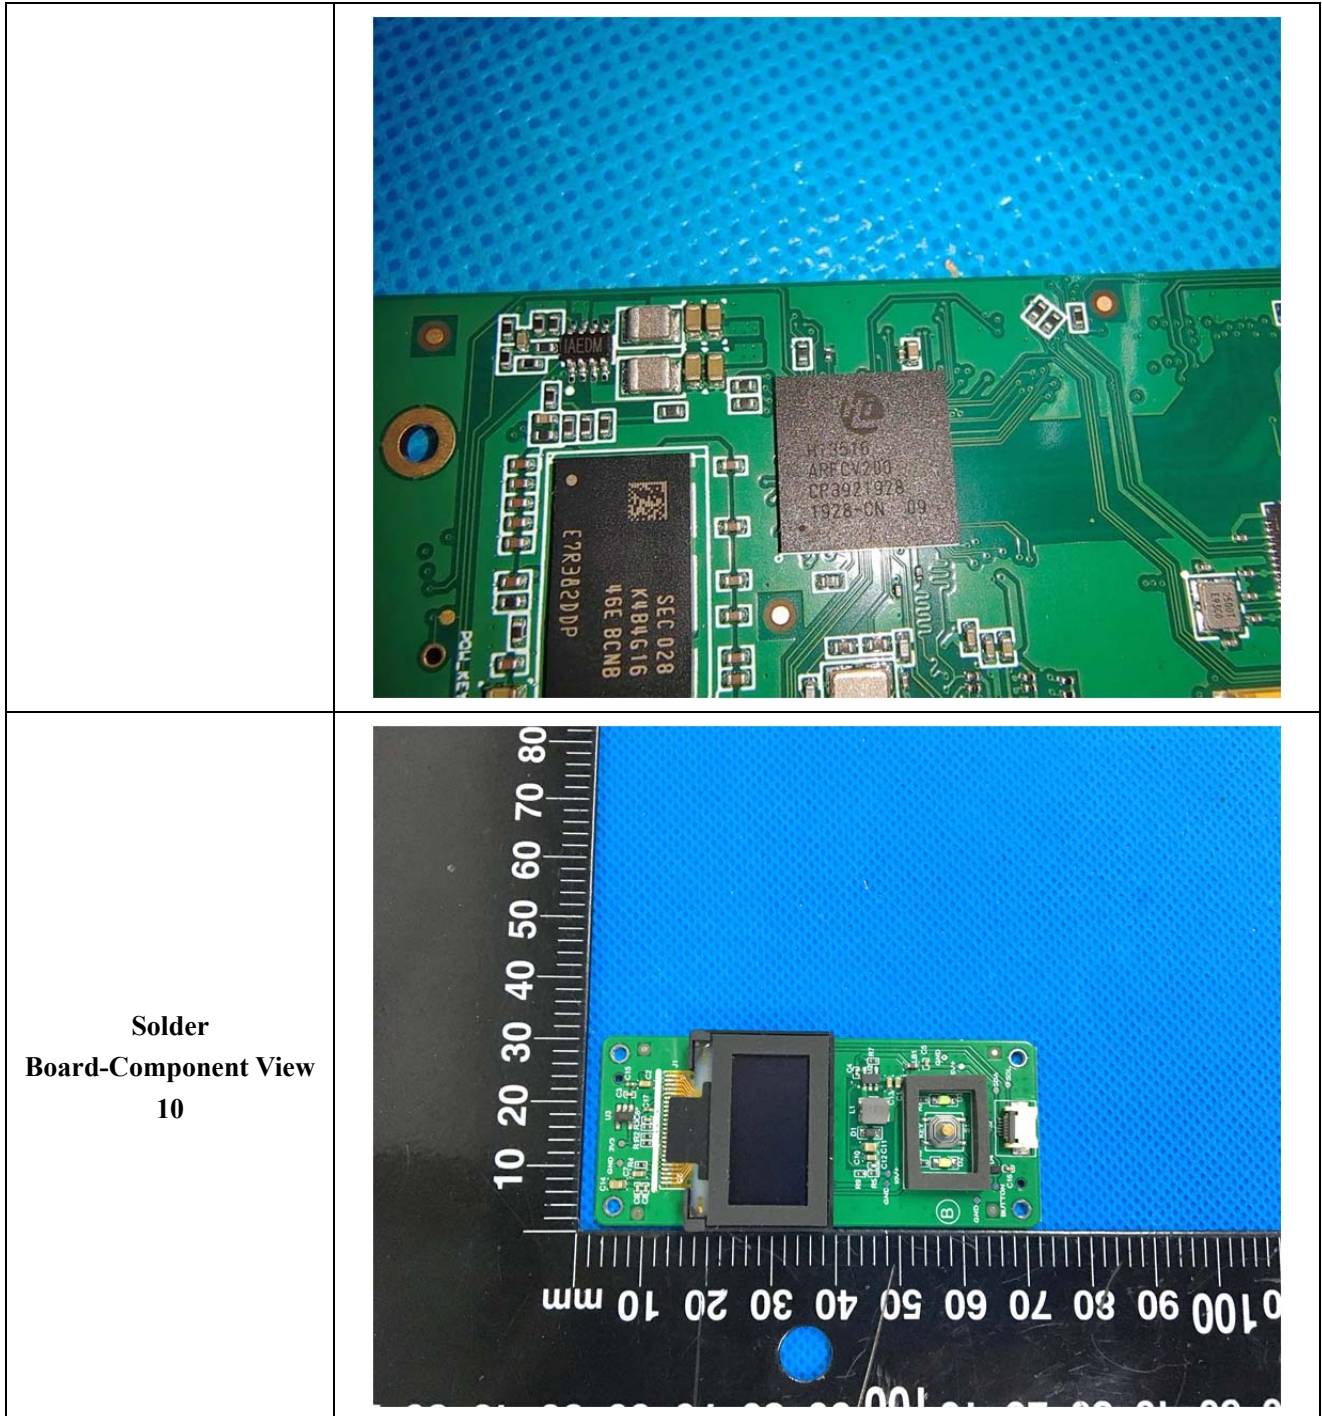

<p>EUT Housing and Board View 1</p>	 A photograph showing the internal components of an Electronic Under Test (EUT) housed in a black plastic casing. The components include a green printed circuit board (PCB) with various electronic components, a blue battery pack, and a fan. A black ruler is placed vertically on the left side of the assembly for scale, with markings in millimeters. The background is a solid blue color.
<p>Solder Board-Component View 1</p>	 A close-up photograph of a small green PCB component, likely a soldered board component, placed on a blue textured surface. A black ruler is positioned vertically on the left side of the component for scale, with markings in millimeters. The component has several surface-mounted components and a connector. The background is a solid blue color.

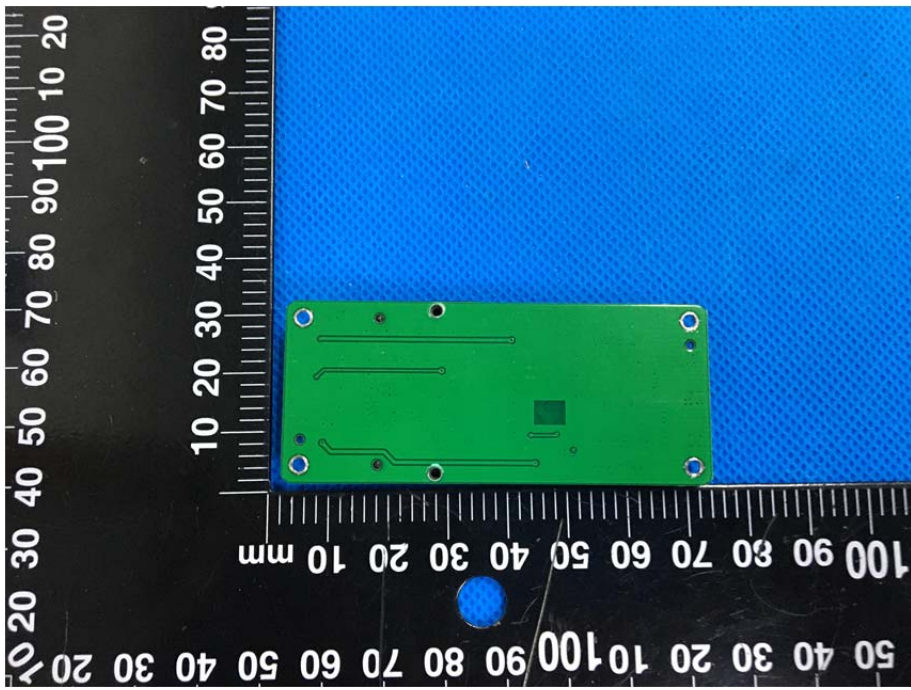

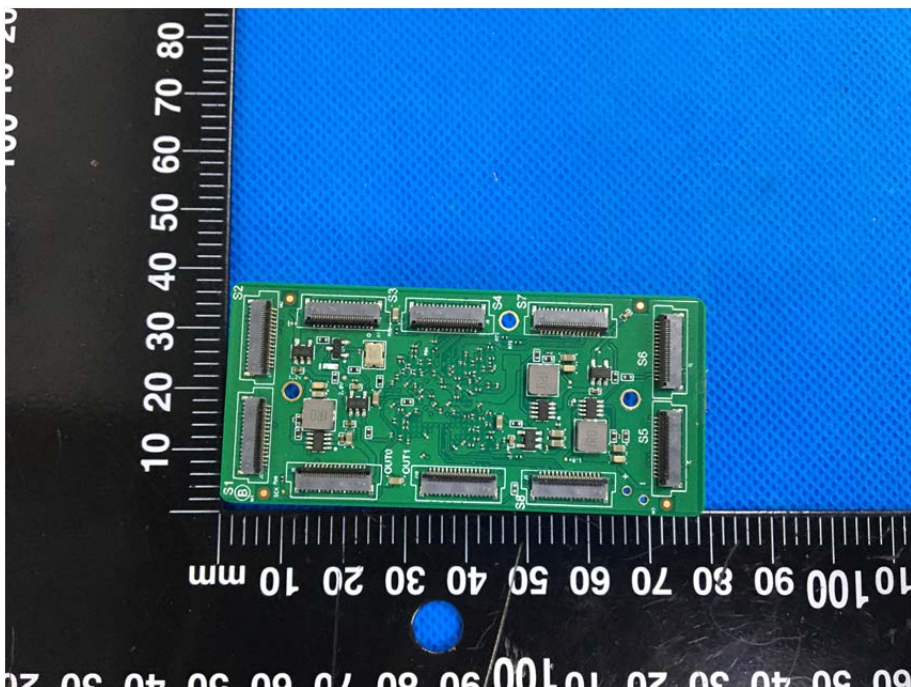

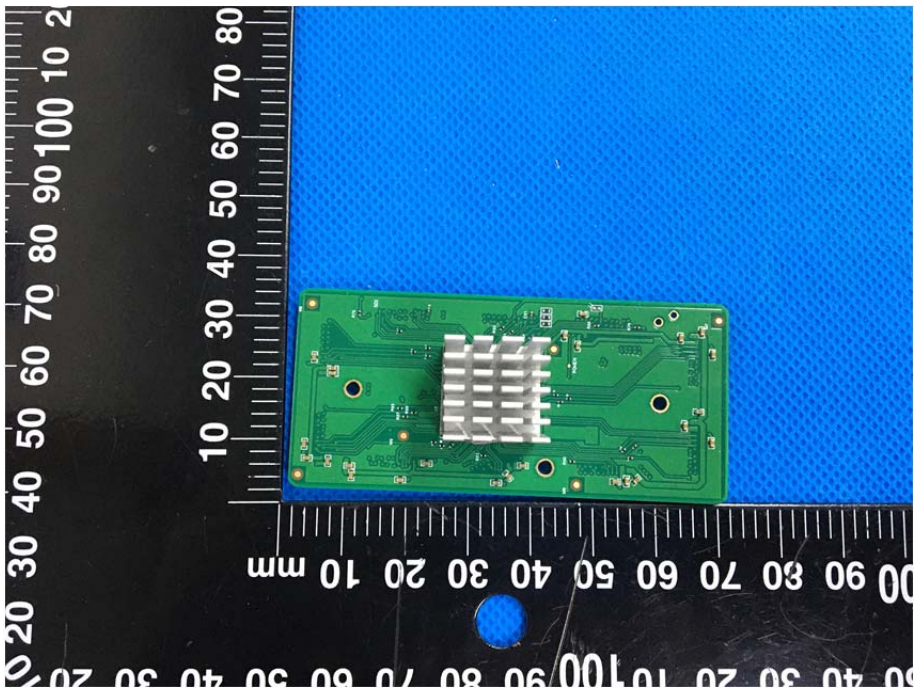

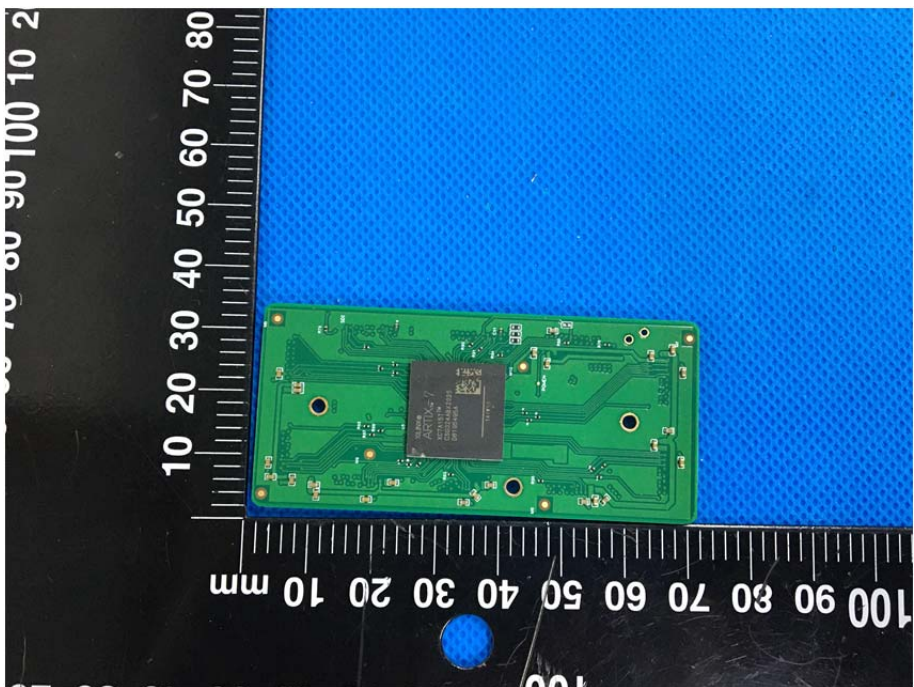

<p>Solder Board-Component View 4</p>	 A photograph of a small, square, black solder board component. The component has four circular holes, two on each side. It is placed on a blue textured surface next to a black ruler with white markings. The ruler shows measurements in millimeters, with the component's width being approximately 30 mm and its height approximately 25 mm.
<p>Solder Board-Component View 5</p>	 A photograph of a blue rectangular solder board component. The component has a black rectangular area in the center. It is connected to a white connector with four colored wires (red, yellow, black, and red). The component is placed on a blue textured surface next to a black ruler with white markings. The ruler shows measurements in millimeters, with the component's length being approximately 100 mm and its width approximately 40 mm.

<p style="text-align: center;">Solder Board-Component View 6</p>	 <p>A photograph of a green printed circuit board (PCB) component, labeled '6', showing its soldered side. The board is L-shaped and populated with various electronic components, including a large silver capacitor with the value '2R2', a smaller capacitor with '1R5', and several integrated circuits. It features a multi-pin connector on the left and a two-pin connector on the right. The board is placed on a blue textured surface next to a black ruler with white markings in millimeters. The ruler shows the board's length is approximately 100 mm and its width is about 20 mm.</p>
<p style="text-align: center;">Solder Board-Component View 7</p>	 <p>A photograph of the same green PCB component, labeled '7', showing its reverse side. The board is mostly empty, with visible copper traces and a small white barcode sticker. It has two circular mounting holes. The board is placed on a blue textured surface next to a black ruler with white markings in millimeters. The ruler shows the board's length is approximately 100 mm and its width is about 20 mm.</p>

<p>Solder Board-Component View 8</p>	 <p>A photograph of a green printed circuit board (PCB) component, labeled as View 8. The board is rectangular and populated with various electronic components, including a large square chip, several smaller integrated circuits, and surface-mount components. The board is placed on a black surface with a white ruler for scale. The ruler shows markings in millimeters, with the component spanning approximately 100 mm in length and 40 mm in width. The background is a blue textured surface.</p>
<p>Solder Board-Component View 9</p>	 <p>A photograph of the same green PCB component, labeled as View 9. This view shows the component from a different angle, highlighting the solder joints and the placement of components on the reverse side of the board. The board is again placed on a black surface with a white ruler for scale, showing a length of approximately 100 mm and a width of about 40 mm. The background is a blue textured surface.</p>

<p style="text-align: center;">Solder Board-Component View 11</p>	 A photograph of a green printed circuit board (PCB) component, labeled 'Solder Board-Component View 11'. The board is rectangular and features several circular solder pads and traces. It is positioned on a black surface with a white ruler for scale. The ruler shows markings in millimeters, with the board's length approximately 100 mm and width approximately 40 mm. The background is a blue textured surface.
<p style="text-align: center;">Solder Board-Component View 12</p>	 A photograph of a green printed circuit board (PCB) component, labeled 'Solder Board-Component View 12'. This board is more complex than the one in View 11, featuring numerous integrated circuits (chips), resistors, and other electronic components. It is positioned on a black surface with a white ruler for scale. The ruler shows markings in millimeters, with the board's length approximately 100 mm and width approximately 40 mm. The background is a blue textured surface.

<p style="text-align: center;">Solder Board-Component View 13</p>	 <p>A photograph of a green printed circuit board (PCB) component, labeled 'Solder Board-Component View 13'. The component is rectangular and features a central white, multi-pin connector. It is placed on a blue textured surface. A black ruler with white markings is visible on the left and bottom edges of the image, showing measurements in millimeters. The ruler on the left is oriented vertically, and the ruler on the bottom is oriented horizontally.</p>
<p style="text-align: center;">Solder Board-Component View 14</p>	 <p>A photograph of a green printed circuit board (PCB) component, labeled 'Solder Board-Component View 14'. The component is rectangular and features a central black integrated circuit (IC) chip. It is placed on a blue textured surface. A black ruler with white markings is visible on the left and bottom edges of the image, showing measurements in millimeters. The ruler on the left is oriented vertically, and the ruler on the bottom is oriented horizontally.</p>
