

# Report on the Industry Canada Testing of:

DETNET SOUTH AFRICA (PTY) LTD  
Blasting control of electronic detonators, Model: CE4 Commander

## In accordance with Industry Canada RSS-247 and Industry Canada RSS-GEN

Prepared for: DETNET SOUTH AFRICA (PTY) LTD  
Block 1B, Founders Hill Office Park  
Centenary Road, Modderfontein P O Box 10  
1645, SOUTH AFRICA

IC: 24476-15351660

Signatures in this approval box have checked this document in line with the requirements of TÜV SÜD document control rules.

### ENGINEERING STATEMENT

The measurements shown in this report were made in accordance with the procedures described on test pages. All reported testing was carried out on a sample equipment to demonstrate limited compliance with Industry Canada RSS-247 and Industry Canada RSS-GEN. The sample tested was found to comply with the requirements defined in the applied rules.

### EXECUTIVE SUMMARY

A sample of this product was tested and found to be compliant with Industry Canada RSS-247 Issue 2 (2017-02) and Industry Canada RSS-GEN: Issue 5 (2018-04).

# 1 Report Summary

## 1.1 Report Modification Record

Alterations and additions to this report will be issued to the holders of each copy in the form of a complete document.

Issue	Description of Change	Date of Issue
1	First Issue	03 April 2019
2	Add Declared Variant	02 February 2022

**Table 1**

## 1.2 Introduction

Applicant	DETNET SOUTH AFRICA (PTY) LTD
Manufacturer	DETNET SOUTH AFRICA (PTY) LTD
Model Number(s)	CE4 Commander
Manufacturer's Declared Variant(s)	CE4 Commander DS600
Serial Number(s)	1530000B8
Hardware Version(s)	V5
Software Version(s)	36230C
Number of Samples Tested	1
Test Specification/Issue/Date	Industry Canada RSS-247: Issue 2 (2017-02) Industry Canada RSS-GEN: Issue 5 (2018-04)
Order Number	4500366034
Date	06-February-2019
Date of Receipt of EUT	07-September-2018
Start of Test	12-February-2019
Finish of Test	25-February-2019
Name of Engineer(s)	Nandhini Mathivanan and Graeme Lawler
Related Document(s)	ANSI C63.10 (2013)

### 1.3 Brief Summary of Results

A brief summary of the tests carried out in accordance with Industry Canada RSS-247 and Industry Canada RSS-GEN is shown below.

Section	Specification Clause		Test Description	Result	Comments/Base Standard
	RSS-247	RSS-GEN			
Configuration and Mode: Commander 1 - 900 MHz					
2.1	5.4	6.12	Maximum Conducted Output Power	Pass	ANSI C63.10 (2013)
2.2	5.1	-	Frequency Hopping Systems - Average Time of Occupancy	Pass	ANSI C63.10 (2013)
2.3	5.1	-	Frequency Hopping Systems - Channel Separation	Pass	ANSI C63.10 (2013)
2.4	5.1	-	Frequency Hopping Systems - Number of Hopping Channels	Pass	ANSI C63.10 (2013)
2.5	5.1		Frequency Hopping Systems - 20 dB Bandwidth	Pass	ANSI C63.10 (2013)
2.6	5.5	-	Authorised Band Edges	Pass	ANSI C63.10 (2013)
2.7	-	8.10	Restricted Band Edges	Pass	ANSI C63.10 (2013)
2.8	5.5	6.13	Spurious Radiated Emissions	Pass	ANSI C63.10 (2013)

**Table 2**

## 1.4 Manufacturer's Declared Variant(s)

Classification:  <b>Restricted</b>	System/Product:	Document Ref:	Revision:
	<b>DigiShot 600</b>	<b>TGN-00106</b>	<b>1</b>
	Document Type:	Current Author:	
	<b>TGN-Tech General</b>	<b>Morgan Lombard</b>	
	Title:	Original Author:	
<b>Changes between DigiShot 600 Commander and CE4 Commander.</b>	<b>Morgan Lombard</b>		Page:
		<b>Page 1 of 3</b>	

### 1 INTRODUCTION

#### 1.1 Objective

This document describes the differences between the standard CE4 Commander and the DigiShot Commander. Note that from a branding perspective, the system will be branded as 'DigiShot' not 'DigiShot 600' – the latter name being used internally in DetNet to distinguish between the new and old systems.

#### 1.2 Reference Documents

- URS-00111 : DigiShot 600

### 2 CHANGES

#### 2.1 Hardware Changes

The number of Channels have been reduced to from 4 IOM to 2 IOM.

Table 1 - Hardware differences

	CE4 Commander	DigiShot Commander
Channels	4	2*

\* Channel 3 and 4 will be used on DigiShot.

#### 2.2 Mechanical changes

- Main enclosure colour changed from Pantone Yellow 1235C to Pantone Orange 21C. Base material remains PA 66. Other elements remain the same.
- Top two IOM, bezels, spring-loaded wire terminals, associated gaskets and fastening hardware removed.
- The DigiShot UI Faceplate lacks the holes for the above bezels and spring-loaded wire terminals. A Matt Polycarbonate product label is placed over this area.
- Same packaging will be used as the CE4 Commander, at roughly the same weight (14Kg). Packaging tests are conducted to the nearest Kg so the difference in weight from the lack of two IOM is negligible.
- Fitted with an improved UI front plate and sealing.

**2.3 Firmware Changes**

The Base is only allowed to connect to one Bench by default. A ticket option can be used to change the number of benches to two. The Bench only allows 300 detonators per channel. The Bench is limited to two channels. The Bench only works with DigiShot detonators.

**3 REVISION HISTORY**

Revision 1: New document

**1.6.3 EUT Configuration and Rationale for Radiated Spurious Emissions**

The EUT was placed on the non-conducting platform in a manner typical of a normal installation. Pre-scans were performed with the EUT orientated in an upright position with reference to the ground plane as intended for normal operation.

Ports on the EUT were terminated with loads as described in ANSI C63.4, clause 6.2.4.

**1.7 Deviations from the Standard**

No deviations from the applicable test standard were made during testing.

**1.8 EUT Modification Record**

The table below details modifications made to the EUT during the test programme. The modifications incorporated during each test are recorded on the appropriate test pages.

Modification State	Description of Modification still fitted to EUT	Modification Fitted By	Date Modification Fitted
Serial Number: 1530000B8

## 2 Test Details

### 2.1 Maximum Conducted Output Power

#### 2.1.1 Specification Reference

Industry Canada RSS-247, Clause 5.4  
Industry Canada RSS-GEN, Clause 6.12

#### 2.1.2 Equipment Under Test and Modification State

CE4 Commander, S/N: 1530000B8 - Modification State 0

#### 2.1.3 Date of Test

14-February-2019

#### 2.1.4 Test Method

The test was performed in accordance with ANSI C63.10, clause 7.8.5

#### 2.1.5 Environmental Conditions

Ambient Temperature 21.8 °C  
Relative Humidity 35.1 %

#### 2.1.6 Test Results

Commander 1 - 900 MHz

Frequency (MHz)	Maximum Output Power	
	dBm	mW
902.750	29.47	885.116
914.900	29.64	920.500
927.575	29.56	903.650

**Table 5 - Maximum Conducted Output Power Results**

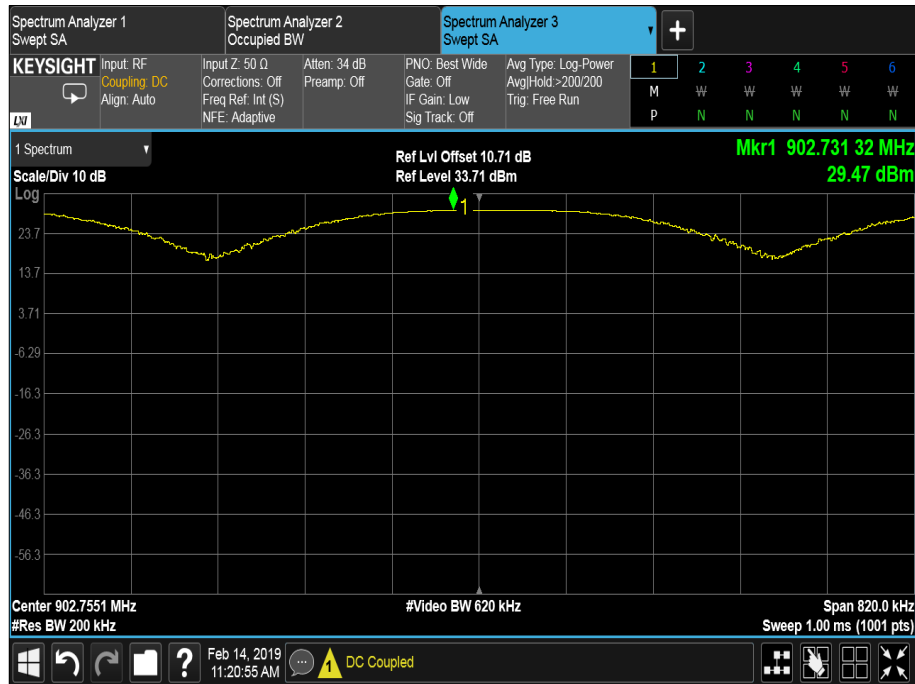

Figure 3 - 902.750 MHz - Maximum Output Power

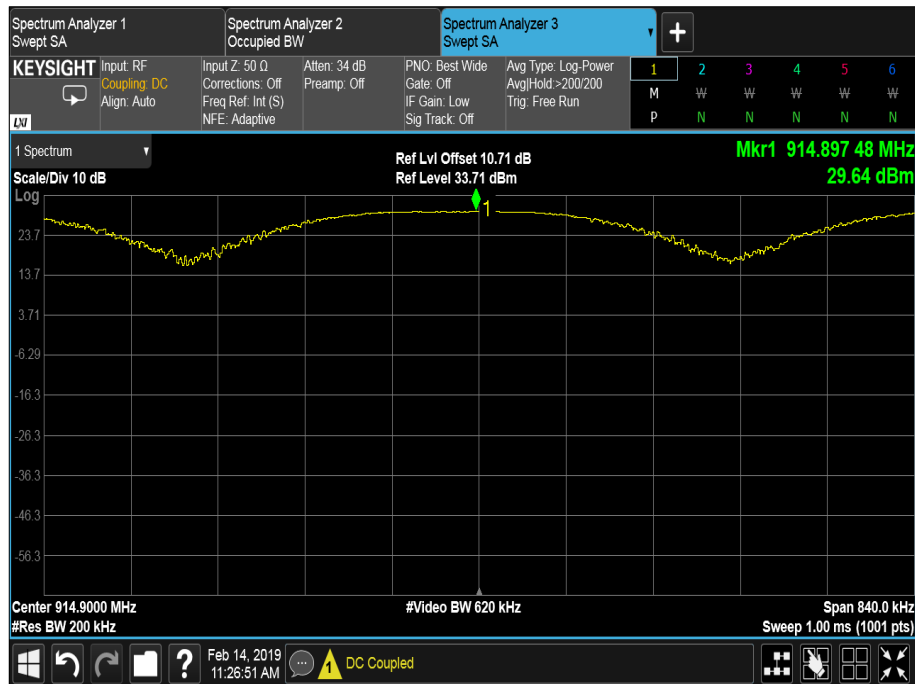

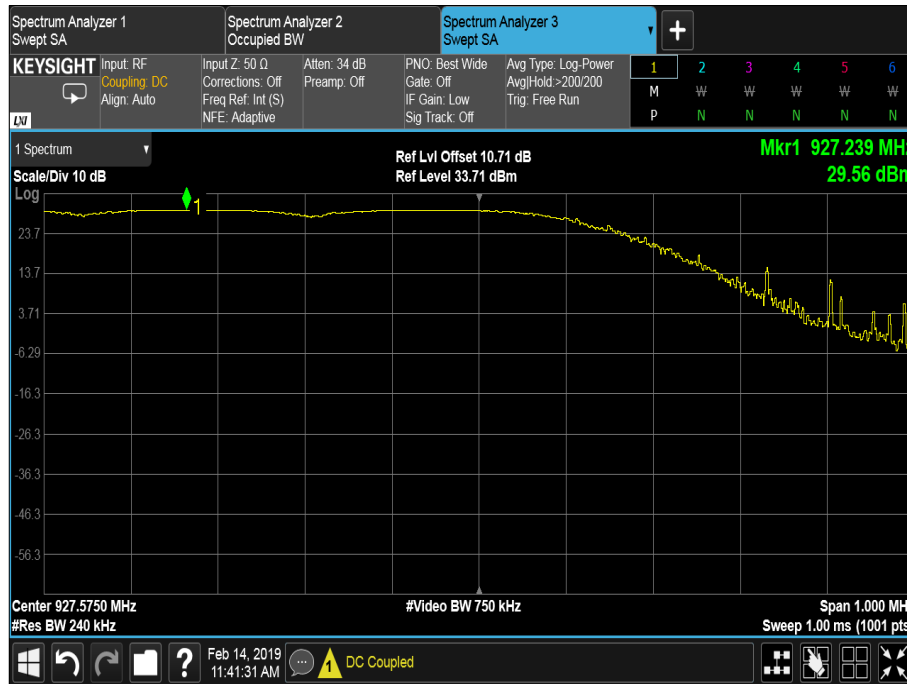

Figure 4 - 914.900 MHz - Maximum Output Power

**Figure 5 - 927.575 MHz - Maximum Output Power**

Industry Canada RSS-247, Limit Clause 5.4 (a)

For FHSs operating in the band 902-928 MHz, the maximum peak conducted output power shall not exceed 1.0 W, and the e.i.r.p. shall not exceed 4 W if the hopset uses 50 or more hopping channels; the maximum peak conducted output power shall not exceed 0.25 W and the e.i.r.p. shall not exceed 1 W if the hopset uses less than 50 hopping channels.

**2.1.7 Test Location and Test Equipment Used**

This test was carried out in RF Laboratory 3.

Instrument	Manufacturer	Type No	TE No	Calibration Period (months)	Calibration Due
Attenuator (10dB)	Weinschel	47-10-34	481	12	18-Jul-2019

**2.2 Frequency Hopping Systems - Average Time of Occupancy**

**2.2.1 Specification Reference**

Industry Canada RSS-247, Clause 5.1

**2.2.2 Equipment Under Test and Modification State**

CE4 Commander, S/N: 1530000B8 - Modification State 0

**2.2.3 Date of Test**

12-February-2019 to 13-February-2019

**2.2.4 Test Method**

The test was performed in accordance with ANSI C63.10, clause 7.8.4.

**2.2.5 Environmental Conditions**

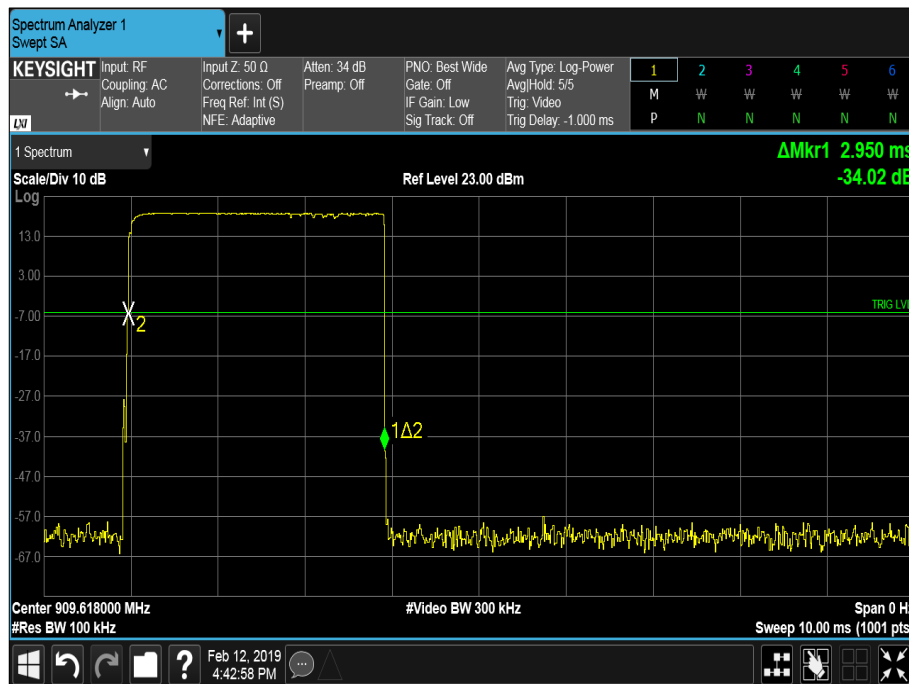

Ambient Temperature 22.2 °C  
 Relative Humidity 35.3 %

**2.2.6 Test Results**

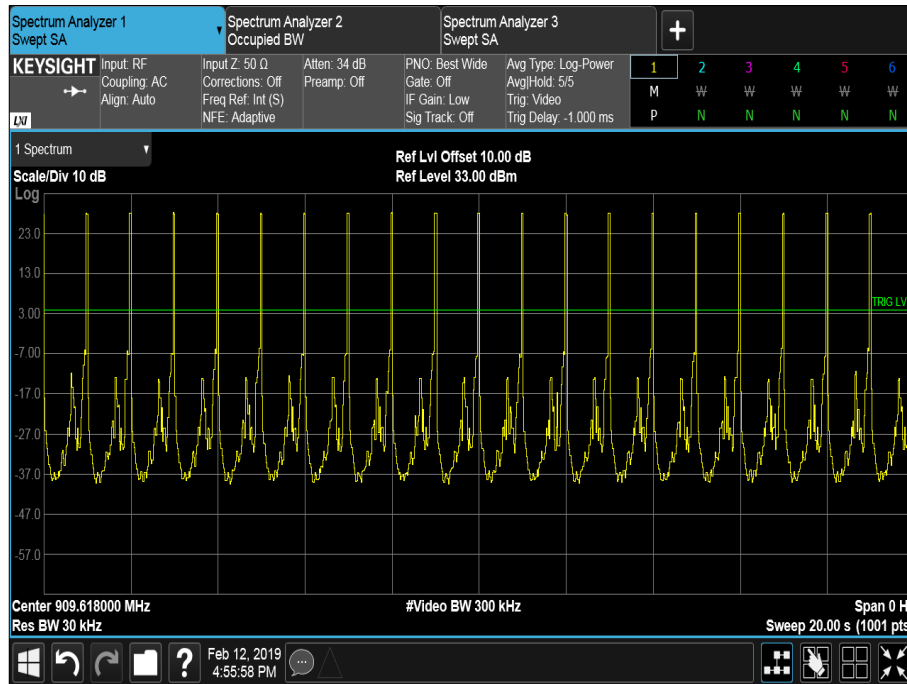

Commander 1 - 900 MHz

Dwell Time (ms)	Number of Transmissions	Average Occupancy Time (ms)
2.950	21	0.062

**Table 7**

**Figure 6 - Dwell Time**

**Figure 7 - Total Average Time of Occupancy**

Industry Canada RSS-247, Limit Clause 5.1 (c)

The average time of occupancy on any channel shall not be greater than 0.4 seconds within a 20-second period. If the 20 dB bandwidth of the hopping channel is 250 kHz or greater, the system shall use at least 25 hopping channels and the average time of occupancy on any channel shall not be greater than 0.4 seconds within a 10-second period.

**2.2.7 Test Location and Test Equipment Used**

This test was carried out in RF Laboratory 3.

Instrument	Manufacturer	Type No	TE No	Calibration Period (months)	Calibration Due
Attenuator (10dB)	Weinschel	47-10-34	481	12	18-Jul-2019

**2.6.3 Date of Test**

25-February-2019

**2.6.4 Test Method**

The test was performed in accordance with ANSI C63.10, clause 6.10.4.

**2.6.5 Environmental Conditions**

Ambient Temperature 20.1 °C  
 Relative Humidity 32.0 %

**2.6.6 Test Results**

Commander 1 - 900 MHz

Mode	Frequency (MHz)	Measured Frequency (MHz)	Level (dBc)
Hopping	902.000	902.00	-24.21
Hopping	928.000	928.00	-37.88

**Table 14**

**Figure 13 - Hopping - Measured Frequency 902.00 MHz**

Figure 14 - Hopping - Measured Frequency 928.00 MHz

Industry Canada RSS-247, Limit Clause 5.5

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated device is operating, the RF power that is produced shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided that the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of root-mean-square averaging over a time interval, as permitted under Section 5.4(4), the attenuation required shall be 30 dB instead of 20 dB. Attenuation below the general field strength limits specified in RSS-Gen is not required.

**2.6.7 Test Location and Test Equipment Used**

This test was carried out in EMC Chamber 5.

Instrument	Manufacturer	Type No	TE No	Calibration Period (months)	Calibration Due

**Table 15**

TU - Traceability Unscheduled

**2.7 Restricted Band Edges**

**2.7.1 Specification Reference**

Industry Canada RSS-GEN, Clause 8.10

**2.7.2 Equipment Under Test and Modification State**

CE4 Commander, S/N: 1530000B8 - Modification State 0

**2.7.3 Date of Test**

25-February-2019

**2.7.4 Test Method**

This test was performed in accordance with ANSI C63.10, clause 6.10.5.

Plots for average measurements were taken in accordance with ANSI C63.10 clause 4.1.4.2.3. These are shown for information purposes and were used to determine the worst-case measurement point. Final average measurements were then taken in accordance with ANSI C63.10 clause 4.1.4.2.1 to obtain the measurement result recorded in the test results tables.

The following conversion can be applied to convert from dBµV/m to µV/m:  
 $10^{(Field\ Strength\ in\ dB\mu V/m/20)}$ .

**2.7.5 Environmental Conditions**

Mode	Frequency (MHz)	Measured Frequency (MHz)	Peak Level (dBµV/m)
Hopping	902.000	614.000	39.76
Hopping	928.000	960.000	47.44

**Table 16**

Figure 15 - Hopping - Measured Frequency 614.000 MHz - Peak

Figure 16 - Hopping - Measured Frequency 960.000 MHz - Peak

Industry Canada RSS-GEN, Limit Clause 8.9

Frequency (MHz)	Field Strength ( $\mu\text{V}/\text{m}$ at 3 metres)
30-88	100
88-216	150
216-960	200
Above 960*	500

**Table 17**

\*Unless otherwise specified, for all frequencies greater than 1 GHz, the radiated emission limits for licence-exempt radio apparatus stated in applicable RSSs (including RSS-Gen) are based on measurements using a linear average detector function having a minimum resolution bandwidth of 1 MHz. If an average limit is specified for the EUT, then the peak emission shall also be measured with instrumentation properly adjusted for such factors as pulse desensitization to ensure the peak emission is less than 20 dB above the average limit.

**2.7.7 Test Location and Test Equipment Used**

This test was carried out in EMC Chamber 5.

Instrument	Manufacturer	Type No	TE No	Calibration Period (months)	Calibration Due

TU - Traceability Unscheduled

## **2.8 Spurious Radiated Emissions**

### **2.8.1 Specification Reference**

Industry Canada RSS-247, Clause 5.5  
Industry Canada RSS-GEN, Clause 6.13

### **2.8.2 Equipment Under Test and Modification State**

CE4 Commander, S/N: 1530000B8 - Modification State 0

### **2.8.3 Date of Test**

25-February-2019

### **2.8.4 Test Method**

This test was performed in accordance with ANSI C63.10-2013 clause 6.3, 6.5 and 6.6.

For frequencies > 1 GHz, plots for average measurements were taken in accordance with ANSI C63.10 clause 4.1.4.2.3 to characterize the EUT. Where emissions were detected, final average measurements were taken in accordance with ANSI C63.10 clause 4.1.4.2.2.

The plots shown are the characterization of the EUT. The limits on the plots represent the most stringent case for restricted bands, (74/54 dBuV/m) when compared to 20 dBc outside restricted bands. The limits shown have been used as a threshold to determine where further measurements are necessary. Where results are within 10 dB of the limits shown on the plots, further investigation was carried out and reported in results tables.

The following conversion can be applied to convert from dB $\mu$ V/m to  $\mu$ V/m:  
 $10^{(\text{Field Strength in dB}\mu\text{V/m}/20)}$ .

For frequencies > 18 GHz, the measurement distance was reduced to 1 meter and the limit line was increased by  $20 \cdot \text{LOG}(3/1) = 9.54$  dB.

### **2.8.5 Environmental Conditions**

Ambient Temperature	20.1 °C
Relative Humidity	32.0 %

2.8.6 Test Results

Remarks

The 2.4 GHz WiFi could not be disabled for the test and therefore it's intentional transmitter can be seen on the plots above but as it is an intentional transmitter it is not subject to the requirements of this test.

The emissions at 1.5 GHz do not fall within a restricted band and therefore the limit is -20 dBc from the peak level of the intentional transmitter at 900 MHz when measured in a 100 kHz RBW.

Industry Canada RSS-247, Limit Clause 5.5

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated device is operating, the RF power that is produced shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided that the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of root-mean-square averaging over a time interval, as permitted under Section 5.4(4), the attenuation required shall be 30 dB instead of 20 dB. Attenuation below the general field strength limits specified in RSS-Gen is not required.

### 2.8.7 Test Location and Test Equipment Used

This test was carried out in EMC Chamber 5.

## 4 Measurement Uncertainty

For a 95% confidence level, the measurement uncertainties for defined systems are:

Test Name	Measurement Uncertainty
Maximum Conducted Output Power	$\pm 3.2$ dB
Frequency Hopping Systems - Average Time of Occupancy	-
Frequency Hopping Systems - Channel Separation	$\pm 5.072$ kHz
Frequency Hopping Systems - Number of Hopping Channels	-
Frequency Hopping Systems - 20 dB Bandwidth	$\pm 5.072$ kHz
Authorised Band Edges	30 MHz to 1 GHz: $\pm 5.2$ dB 1 GHz to 40 GHz: $\pm 6.3$ dB
Restricted Band Edges	30 MHz to 1 GHz: $\pm 5.2$ dB 1 GHz to 40 GHz: $\pm 6.3$ dB
Spurious Radiated Emissions	30 MHz to 1 GHz: $\pm 5.2$ dB 1 GHz to 40 GHz: $\pm 6.3$ dB
