## FCC ID: 2ARRF-EHSEABHAM5DEC

Portable device
According to $\S 15.231$ and $\S 1.1307(\mathrm{~b})(1)$, systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.
According to KDB447498 D01 General RF Exposure Guidance V06
The $1-\mathrm{g}$ SAR and $10-\mathrm{g}$ SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances $\leq 50 \mathrm{~mm}$ are determined by:
[(max. power of channel, including tune-up tolerance, mW$) /(\mathrm{min}$. test separation distance, $\mathrm{mm})] \cdot[\mathrm{Vf}(\mathrm{GHZ})] \leq 3.0$ for $1-\mathrm{g}$ SAR and $\leq 7.5$ for $10-\mathrm{g}$ extremity SAR, where:

- $\quad \mathrm{f}(\mathrm{GHZ})$ is the RF channel transmit frequency in GHz
- Power and distance are rounded to the nearest mW and mm before calculation
- The result is rounded to one decimal place for comparison

When the minimum test separation distance is $<5 \mathrm{~mm}$, a distance of 5 mm is applied to determine SAR test exclusion.

Antenna Type: PCB Antenna
Antenna Gain:1.5 dBi

Transmit power:

## Conclusion:

For the max result : $0.000005 \leq 3.0$ for $1-\mathrm{g}$ SAR, No SAR is required.
